Improving population health
Transforming education
Continued on Page 5
Babo who, following his residency, served rotations overseas during the mid-1980s while he was a medical student at Oral Roberts University (SBBS) in Tulsa. He has been a primary care physician and participant in community medicine for many years.

As a teenager I had a strong desire to care for patients and to also serve as an example for our future generations. I most remember is a sign revealing the storehouse at St. James’s Gate Brewery in Dublin, the home of Guinness. Arthur was a bold man, a trailblazer who established the modern brewing process.

Dr. Babo inspires medical students with his story: “As a teenager I had a strong desire to care for patients and to also serve as an example for our future generations. I most remember is a sign revealing the storehouse at St. James’s Gate Brewery in Dublin, the home of Guinness. Arthur was a bold man, a trailblazer who established the modern brewing process. It is a true story that I use to teach my students how important it is to care for the patient and the community.”

Family practice physician Mark Babo wants not only to help medical students become physician-nurse teams that can understand the role of the patient, but also to expose them to alternative medicine.

Mark Babo (pronounced BAH-bo) is director of the Ochsner Clinic Foundation’s Family Medicine Residency Program at Ochsner Clinic Foundation in New Orleans. He is a well-respected clinician and researcher who has been a medical student at Oral Roberts University (SBBS) in Tulsa. He has been a primary care physician and participant in community medicine for many years.

Dr. Babo explained, “As a teenager I had a strong desire to care for patients and to also serve as an example for our future generations. I most remember is a sign revealing the storehouse at St. James’s Gate Brewery in Dublin, the home of Guinness. Arthur was a bold man, a trailblazer who established the modern brewing process. It is a true story that I use to teach my students how important it is to care for the patient and the community.”

I encourage all faculty to review the draft plan goals and share with me specific strategies and tactics for each goal.

As the magical fifth ingredient is faculty. This feedback is important for all members to share thoughts with me directly.

When I think about our current strategic plan for UC Davis Health System, I think of all that we have to create a successful future – our students, residents, fellows, staff and patients. Great ideas are going to be invaluable feedback on our way to future success.

Our magical fifth ingredient is faculty.

Sasha Duffy specializes in pediatric neurology.
Board-certified and fellowship-trained neurologist Alexandra (Sasha) Duffy, D.O., is a faculty member at UC Davis School of Medicine and has been engaging in research and clinical practice for over 13 years as an assistant professor of pediatric neurology within the Division of Neurology and has experience in the use of deep brain stimulation.

Duffy is involved in procuring and shipping medical equipment, medicines and supplies to health care institutions in underserved regions. She says she has learned valuable lessons about human relations from his work overseas.

In the United States we're job- and time-driven, but there is a real need to practice medicine, and she says work-life balance is important. "I love my work and I love my patients, but that's not the whole story," she says.

"I love clinical practice and direct patient care, and enjoy combining this with research, teaching and mentoring," Duffy said.

"I love working with children and their families. It's a very rewarding field, and I love my work and my patients."

Duffy is engaged in the treatment of Huntington’s disease. She is a sub-investigator for the observational trial PRE-CELL, the lead-in trial for the definitive clinical trial for future patients with Huntington’s disease.

She is fully trained in fetal and maternal medicine, is skilled in the use of ultrasound imaging techniques, and has expertise in the use of ultrasound imaging in obstetrics and gynecology.

Scott Fuller also has expertise in thyroid and parathyroid surgery. This includes minimally invasive parathyroidectomy and parathyroidectomy for patients with severe hyperparathyroidism and those with thyroid disorders associated with cervical abnormalities.

Jeniffer "Jeni" Dayton, M.D., is a neurologist at UC Davis Health System who specializes in the treatment of spinal cord injuries.

Dayan received his M.D. from the University of California, San Diego School of Medicine and completed his residency in neurology at the University of California, San Francisco and a fellowship in neurorehabilitation at the University of California, San Francisco School of Medicine.

In her research, she studies the use of transcranial magnetic stimulation for the treatment of depression, as well as the use of rehabilitation techniques to improve motor function in patients with spinal cord injury.

Jonathan "Yoni" Dayan, M.D., is a neurologist at UC Davis Health System who specializes in the treatment of spinal cord injuries.

Tulsa, he has been a tireless proponent of missionary medicine. ‘I love clinical practice and direct patient care, and enjoy combining this with my research,’ Babo said. ‘I love the idea of studying patients and putting this knowledge to use.’

‘Missionary medicine is the means to my highest personal goal of serving the world medically,’ Babo said. ‘I’m proud to be an MD and a doctor of public health. I believe public health is an area of global health systems and development that has a future in the United States. Our faculty have a choice. I believe the future of care is in global health care.’

A WELCOME TO NEW FACULTY COLLEAGUES

Each edition of the Faculty Newsletter introduces several faculty colleagues who recently joined the UC Davis Health System community. Watch for more clinical and research staff members in the next issue.

Sadie Duffy specialises in neurology

Board-certified and fellowship-trained neurologist Alexandra (Sadie) Duffy, D.O., is a brain and behavior consultant at UC Davis Medical Center and Friedman has experience in the use of deep brain stimulation. In her research, she is conducting clinical research that could lead to new medical treatments.

‘I love being part of a highly collaborative team,’ she said. ‘I get to see improvement in patients and families and that really excites me.’

Dr. Babo provides medical students to see patients and also sees them during the CAMP program, a faculty-led program that helps freshmen learn about medicine. Babo recently attended in December in order to bring them closer to the medical school.

‘It was truly a privilege to work with all the students and faculty,’ Babo said. ‘I am grateful for the opportunity.’

‘I believe public health is an area of global health systems and development that has a future in the United States. Our faculty have a choice. I believe the future of care is in global health care.’

– Mark Babo, faculty member at ORU School of Medicine

bulo@ucdavis.edu to email

The health system would not be able to leverage and convey, internally and externally, all that is ‘uniquely UC Davis.’ This includes our education and research strategies. The ‘uniquely UC Davis’ that we struggle to leverage here is the fact that we have a successful future – our students, residents, students, peers and staff. Our clinical faculty are a large part

Since we started the planning process, I’ve heard from many thoughtful people about our future. Some common themes include increased funding and research. However, the key to unlocking value and unlocking value is the real value is in the people – our faculty and mentors, they positively influence patients and staff. Our clinical faculty save and improve the lives of patients and they lead a new mission to serve needy people in other parts of the world.

I recently took a tour of the Guinness Storehouse at St. James’s Gate Brewery in Dublin, Ireland, where I learned about the brewing process of the ‘black stuff,’ as they call it, as well as its rich history. While this may sound like a study tour, it was an important visit. I believe that the Storehouse at St. James’s Gate Brewery is invaluable, and it will be included in our vision.

Like Arthur Guinness, our faculty are a large part of our future. They are the backbone of the health system, our faculty are a large part of our success.

As the magical fifth ingredient of the faculty, we need to review the dash plan and gear with me specific strategies and axes to help achieve our vision. The ‘uniquely UC Davis’ strategies that we leverage here is the fact that we have a successful future – our students, residents, students, peers and staff. Our clinical faculty are a large part.

I encourage all faculty to review the draft plan goals and share with me specific strategies and axes to help achieve our vision.

Julie A. Freischlag, Vice Chancellor and Dean
Your participation in the planning process, along with the involvement of literally every other member of the UC Davis Health System, is needed.

That's not to say the health system must try to be everything that everyone wants it to be. The strategic plan most definitely be area of greatest needs should be to make the health system is best delivered, and that success will be achieved efficiently and effectively.

That oligarchy is essential because its standpoint of fiscal responsibility is the only view of UC-Mama. What the health system must do is change financial to what would work for the organization and what we should continue to do is to move forward to the future.

Echoes of Markle’s sentiment, Heather Young, Associate Vice Chancellor for Academic Personnel, observes that the health system is essentially one of the health care delivery system that the Affordable Care Act is all about.

The Affordable Care Act is the first of a new era for the health care delivery system. From what we have learned so far, the Affordable Care Act will likely to be a major factor in the future. The health system is becoming clearer. The process of educating all those who participate in the health system, including patients, is becoming clearer.

The strategic plan is intended to identify those that are ahead, those that must be done, those that must be completed, and those that must be completed. The strategic plan must be a way to guide the future for all of us.

The vision is held by everyone, and everyone is involved in its operation and use.

We're a team, and Julie Freischlag e urges...
The strategic plan should help us focus on our future. The strategic plan is intended to identify shared goals that are achievable, while simultaneously reaching the highest standards of excellence in the health system. It serves as a foundation for the work that lies ahead and helps us set priorities that will be critical to our success.

The strategic plan is a living document that evolves as we learn more about our patients, staff, and community needs. It is an ongoing process that requires the participation of all members of the health system. It is a commitment to excellence and a dedication to providing the highest quality care possible.

In conclusion, the strategic plan is a tool that will help us to focus on our future by setting priorities, defining goals, and identifying the resources necessary to achieve them. It is a roadmap for the health system and will serve as a guide for our actions and decisions moving forward.

The importance of the strategic plan cannot be overstated. It is a critical component of our mission and will help us to achieve our goals.

For more information about the strategic plan, please visit the UC Davis Health System website at ucdhealth.ucdavis.edu.

Maurice, who declared that sharp focus and sustained momentum are critical, said, “We need to focus on the right things to succeed, and that means doing what we do best.”

The strategic plan is a foundation for the work that lies ahead and helps us set priorities that will be critical to our success.
