PLANNING FOR RETIREMENT
Workshop series to begin at Sacramento campus in February

Retirement Newsletters

All a faculty member who is about to retire is likely to see retirement as the chance to move to a new chapter of one’s life. Barnes and her colleagues in the UC Davis Health System’s Faculty Development Program are helping faculty members explore new paths of discovery, and helping them transition from one career to the next.

For example, Barnes said, her colleagues in the Faculty Development Program are helping faculty members explore new paths of discovery, and helping them transition from one career to the next. For residents and faculty alike, the experience of participating in faculty development activities is an integral part of teaching and learning.

As an example, he introduced to himself to the teaching community the concept of using a "teachable moment" as a way to support learning and development.

Based on past and current research evidence, but not neglecting the role of experiential learning, faculty development programs aim to bring about change in teaching, learning, and assessment.

Board certified in anesthesiology and critical care medicine, he has multiple years of experience training residents in anesthesia.

We are seeking suggestions of literally every member of the UC Davis Health System community.

Anesthesiologist Kent Garman Discusses Teaching Residents Aviation Protocol

Garman joined the UC Davis School of Medicine faculty part time in 2010 after participating in pioneering cardiac and cardiovascular anesthesia, and rose up through the ranks to emeritus, draws upon the aircraft "horizon scanning" technique he developed while flying in Vietnam. As an example, he introduces himself to neonatologist Kristin Hoffman where he was manager of anesthesia in San Francisco, and returned in 1998 to Stanford, California, to perform surgery.

As an anesthesiology resident was devoting his efforts to treating patients, Garman, who joined the UC Davis faculty part time in 2010 after participating in pioneering cardiac and cardiovascular anesthesia, and rose up through the ranks to emeritus, draws upon the aircraft "horizon scanning" technique he developed while flying in Vietnam. As an example, he introduces himself to neonatologist Kristin Hoffman where he was manager of anesthesia in San Francisco, and returned in 1998 to Stanford, California, to perform surgery.

The anesthesiology resident was describing all of her concentrations in terms of attention to detail and her role on a team. "I was the patient's advocate," she explained, speaking of her work, "and I was very much an advocate for the patient."

That's when she asked him, "What are your thoughts on going into practice?"

"Anesthesiologists also must check a lot of different functions of hydraulic and electrical systems in addition to the more obvious aspects of the heart-lung machine," she continued.

"We would fly about 300 feet off the deck at 350 knots with 28 bombs, 500 pounds of high explosives and a 50-caliber machine gun," he said.

"Our residents value Dr. Garman as an anesthesiologist," she added. "They respect his knowledge and his approach to patient care."
After a career of taking care of other people, a full-time profession, it is important to start taking care of self and recognizing some personal needs, such as doing your canine companion to whom your parent, care children or grandchildren. And it is time to begin thinking about what care of that by deleting the pain in body as to be able to solve other tasks or other activities you enjoy doing. Some of that activity may be writing or scholarship that continues to be done. It’s really a wonderful activity. Callahan said.

Gradual reduction in time is a means of easing the transition to retirement. Employees can talk with their or supervisor about coming back or not. They are always flexible, depending upon the staffing and scheduling in individual departments, but employees and charters may be able to make some accommodations to ease the transition. Callahan said for some programs who work in the divisions to step away from the operating room to continue teaching for a while as they make the transition to retirement.

The primary mission of the UC Davis Health System is connected to the university. The University of California works very hard to keep medical professionals in Davis. The number of retirees soared to 795. The final figures for 2015 have not been the previous year’s total. The number of retirees reached retirement age. In 2005, swelling “baby boom” population that typically entailed traveling to Davis. The four-part series will be held at the Cancer Center Auditorium in Sacramento. The four-part series will be held at the Cancer Center Auditorium in May 6, 2016 – UC-Wide Health Sciences Leadership Development Conferences (WDS).

describes as a fall-off of a cliff. They feel the rug no longer has any support; they start counting the months, and they start counting the days, because they are, in a UC survey of retirees of a few years ago.

People who take the time to plan for retirement are much more likely to receive the retirement they desire, according to a 2014 study conducted for the University of California Office of the President, which found that those who plan for retirement are much more likely to enjoy their retirement, and those who do not plan are much less likely to enjoy their retirement.

When you retire, you can choose to remain active in your community, or you can choose to retire in retirement. For those who choose to remain active in their community, the UC Davis Retiree Center is to keep retirees connected to the university. The center is a central hub for retirees who want to stay involved in their communities, and who want to continue to meet new people and make new friends.

The UC Davis Retiree Center offers a variety of programs and services to help retirees maintain their independence and enjoy their retirement. These programs include:

- Retirement Planning Workshops
- Financial Planning for Retirement
- Retirement Income and Estate Planning
- Social Security and Medicare

The UC Davis Retiree Center also offers a variety of social events, educational programs, tours, and trips. These programs are designed to help retirees stay active and engaged in their communities.

The UC Davis Retiree Center is a community resource for retirees in the Sacramento area. Whether you are looking for a new place to live, a new way to make friends, or a new hobby to try, the UC Davis Retiree Center has something for you.

If you are interested in learning more about the UC Davis Retiree Center, or if you are interested in joining the UC Davis Retiree Center, please contact us at 916-703-9230 or visit our website at www.ucdavis.edu/facultydev.

UC Davis Retiree Center, in partnership with the UC Davis Health System, coordinates programs that respond to the needs of its members. The UC Davis Retiree Center, in collaboration with the UC Davis Health System, coordinates programs that respond to the needs of its members.
