---

**A REAR-FACING CAR SEAT** is the best seat for your young child to use. It has a harness and in a crash, it cradles & moves with your child to reduce injury to the fragile neck & spinal cord.

**A FORWARD-FACING CAR SEAT** has a harness and tether that limits your child’s forward movement during a crash.

**A BOOSTER SEAT** positions the seat belt so that it fits properly over the stronger parts of your child’s body.

**A SEAT BELT** should lie across the upper thighs and be snug across the shoulder and chest to restrain your child safely in a crash. It should never rest on the stomach area or across the neck.
