Families, educators, health professionals, and community members are invited to attend a series of presentations about neurodevelopmental disorders provided by the Center for Excellence in Developmental Disabilities (CEDD) at the UC Davis MIND Institute.

**Evidence Based/Research Based Practices: How to be a wise consumer of treatments and practices for ADHD and ASD**

With so many programs and practices “on the market” that claim everything from prevention to cures, how can people be wise consumers of services? This presentation will provide information about Evidence Based Practices (EBP) and how practices are established as “evidence based.” In addition, MIND Institute researchers will share resources on where to find vetted information about EBPs so that members of our community can make the most informed decisions about training and services.

- Julie Schweitzer, Ph.D. • Aubyn Stahmer, Ph.D.

**Using Evidence Based Practices in the Home and Community: Visual Supports**

Participants will learn how to use this versatile Evidence Based Practice (EBP) to support individuals in the home and in community settings. Various types of visual supports that address adaptive, vocational and behavior needs will be shared. The session will be followed by a “make and take,” where the participants can develop a visual support to use once they leave the workshop. This session is appropriate for anyone supporting individuals with ASD, ADHD or other developmental disabilities, from preschool through adulthood.

- Amber Fitzgerald, MA, BCBA

**Using Evidence Based Practices in the Home and Community: Video Modeling**

If a picture is worth a thousand words, then a video is worth a million! Participants will learn about this highly effective Evidence Based Practice (EBP) that can assist individuals with developmental disabilities in learning a broad array of skills, from academic to self-help to job skills. Examples of various types of video models will be shared, and participants will get a chance to plan and write a script for their own video that can be developed and used once they leave this workshop. This session is appropriate for anyone supporting individuals with ASD, ADHD or other developmental disabilities, from preschool through adulthood.

- Patty Schetter, MA, BCBA

**More Minds Behind the MIND**
