CAMP Study

Do you have a child between the ages of 18-48 months who is typically developing, has an Autism diagnosis, or a child showing signs of Autism or Developmental Delay?

Researchers at the UC Davis MIND Institute are carrying out a study comparing two methods of diagnosing Autism Spectrum Disorder (ASD): a laboratory test performed on a blood sample measuring metabolic markers and standard behavioral testing and observation by a trained psychologist.

Who Can Participate?

Children between the ages of 18-48 months who either:

- Have a clinical diagnosis of Autism Spectrum Disorder (ASD)
- Are showing signs of Developmental Delay or ASD
- Are typically developing

What Does the Study Involve?

- One or two visits to the MIND Institute
- Behavioral and Psychological assessments
- A physical examination
- A medical history review
- A blood draw and a urine sample

What Else Can I Expect?

- Families can receive feedback from expert Clinicians about their child’s development
- Compensation for participation will be provided
- Results from this study will have the potential to positively influence the diagnostic process of ASD

Additional Information

The UC Davis MIND Institute is a collaborative international research center, committed to the awareness, understanding, prevention and care of neuro-developmental disorders.

All studies take place at the MIND Institute, located at:

2825 50th St.
Sacramento, CA 95817

For a map and directions, visit our website at:

mindinstitute.ucdavis.edu.
We invite you to take part in a research study to evaluate a laboratory test being developed to diagnose autism spectrum disorder in early childhood. This study will compare two methods for diagnosing autism spectrum disorder: a laboratory test performed on a blood sample measuring metabolic markers and standard behavioral testing and observation by a trained psychologist.

Who Can Participate?
Girls and boys between 18 and 48 months of age with a diagnosis of autism, developmental delay, or typical development.

What Does the Study Involve?
- One or two visits to the MIND Institute
- Completing various assessments of your child’s development
- Medical history and physical exam
- A blood and urine sample

What Else Can I Expect?
- Families can receive feedback from expert Clinicians about their child’s development
- Compensation for participation will be provided
- Results from this study will have the potential to positively influence the diagnostic process of ASD
