

Albina S. Gogo, M.D.

Philosophy of Care

As a pediatrician, I enjoy the challenge of working with children of all ages at different stages of development. I'm a strong believer in preventive care. It's important for parents and caretakers to be educated in the fundamentals of nutrition, exercise and social development as well as to have a basic understanding of illness and disease. This makes it easier to manage the child's health care. I encourage my patients to participate in sports or other activities to develop their potential and promote physical, mental and social health. I try to create an atmosphere and environment that feels open and friendly as well as supportive for parents. I encourage questions, and I like to provide as much information as possible about the patient's health status and process of care.

Clinical Interests

Albina S. Gogo is a strong believer in preventive care and in providing parents with a basic understanding of childhood diseases and the importance of nutrition, exercise and social development to good health. She encourages her young patients to participate in sports and other activities that contribute to physical, mental and social well-being.
