

June X. Zou, Ph.D.

Clinical Interests	My research programs are focused on the role of nuclear onco-proteins in control of cancer cell proliferation, adhesion and invasion, and the identification of novel nuclear epigenetic regulators in control of hormone-dependent prostate tumor growth and androgen independence. To promote the “bench-to-bedside” transition of my research findings, I have also been engaged in translational research with the goal to identify lead small molecules for potential use as therapeutics and diagnostic tools.
Title	Associate Research Biologist
Specialty	Cancer , Hematology and Oncology, Internal Medicine
Department	Internal Medicine
Division	Hematology and Oncology
Clinic	UC Davis Cancer Center
Languages	Chinese (Mandarin)
Education	Ph.D., UC Davis, Davis, California, 1996 M.S., California State University, Long Beach, Long Beach, California, 1990 B.S., Wuhan University, Peoples Republic of China, 1984
Fellowships	The Burnham Institute, La Jolla, CA, 2000
Professional Memberships	American Association for Cancer Research
