

Ken Yomer Yoneda, M.D.

Philosophy of Care

I firmly believe that patients with cancer are best managed with a multidisciplinary team approach, and that patients, along with their family members, are integral to the decision-making process. I feel extremely fortunate to be a part of our National Cancer Institute-designated cancer center, and to work alongside the dedicated physicians, nurses and other affiliated personnel who make it possible for our patients to have some of the very best care available anywhere in the world. In addition to offering state-of-the-art care and clinical research trials, we have the unique opportunity to discuss patients with lung cancer and other thoracic malignancies before an expert panel of subspecialists at our "tumor board." Whether it is to diagnose, treat or palliate lung cancer, it is through our tumor board, or through close consultation with my medical oncology, thoracic surgery, radiation oncology and thoracic radiology colleagues, that I am able to devise the best strategies for my patients. As an interventional pulmonologist, there are a variety of procedural techniques I can provide to establish a difficult diagnosis, to manage pleural effusions, and to treat endobronchial complications such as hemoptysis and bronchial obstruction. However, I know care must be individualized, as no single strategy works for all patients. Perhaps more so than for any other disease, a patient's overall condition as well as their desires and expectations play the most important role in this decision-making process.

Clinical Interests

Dr. Yoneda's primary outpatient clinical interests are in lung cancer and the thoracic complications associated with other malignancies. As an interventional pulmonologist, he is particularly interested in new and innovative techniques for the diagnosis, management and palliation of pleural effusions and endobronchial lung cancer. It is his belief that technological advances in these fields have improved patient comfort and safety, while improving outcomes and reducing length of hospitalizations. While a variety of procedural approaches are available, he believes that no single strategy works for all patients, and care must be individualized. Dr. Yoneda's hospital-based clinical interests are in general pulmonary and critical care medicine.

Dr. Yoneda's clinical research is focused on lung cancer, particularly with regard to the role of interventional pulmonology in the diagnosis, management and palliation of lung cancer, and the development of interstitial lung disease in lung cancer patients. He also conducts clinical trials in high-altitude medicine, chronic obstructive pulmonary disease (COPD), asthma and sepsis. His basic-science research has involved the study of alterations in airway epithelial cells exposed to tobacco smoke and on differential gene expression in lung cancer.

Title Associate Professor

Specialty [Cancer](#), Internal Medicine, Pulmonary and Critical Care

Ken Yomer Yoneda, M.D.

Department	Internal Medicine
Division	Pulmonary, Critical Care, and Sleep Medicine
Center/Program Affiliation	UC Davis Comprehensive Cancer Center
Address/Phone	UC Davis Comprehensive Cancer Center, 2279 45th Street Sacramento, CA 95817 Phone: 916-734-5959
Additional Phone	Physician Referrals: 800-362-5566
Education	M.D., Northwestern University School of Medicine, Chicago, Illinois, 1985 B.S., UC Davis, Davis, California, 1978
Internships	University of Kansas Medical Center, Kansas City, Kansas, 1985-1986
Residency	University of Kansas Medical Center, Kansas City, Kansas, 1986-1988
Fellowships	UC Davis Medical Center, Sacramento, California, 1993-1996
Board Certifications	American Board of Internal Medicine, 1988 American Board of Internal Medicine, Critical Care Medicine, 1998 American Board of Internal Medicine, Pulmonary Disease, 1996
Professional Memberships	American College of Chest Physicians American College of Physicians American Thoracic Society
Honors and Awards	UC Davis, B.S. with honors, in Biochemistry, 1978
