

## Roger H. Adamson, Ph.D.

**Clinical Interests** Roger H. Adamson's projects concern mechanisms that control paracellular permeability in peripheral microvessels. Current methods include cannulation (tube insertion) and measurement of permeability of single microvessels in the mesentery (abdominal organ lining) of rats, mice and frogs. In addition to transport measurements, he visualizes changes in endothelial cytoskeletal and endothelial adhesion proteins using confocal microscopy and transmission electron microscopy.

**Title** Associate Researcher

**Specialty** Human Physiology

**Department** Physiology and Membrane Biology

**Education** B.A., University of Kansas, Lawrence, Kansas, 1977

**Fellowships** St. Mary's Hospital Medical School, London, 1987-88  
Yale University School of Medicine, New Haven, Connecticut, 1985-87

**Select Recent Publications** Adamson RH, Curry FE, Adamson G, Liu B, Jiang Y, Aktories K, Barth H, Daigeler A, Golenhofen N, Ness W, and Drenckhahn D. Rho and rho kinase modulation of barrier properties: cultured endothelial cells and intact microvessels of rats and mice. *Journal of Physiology (London)* 2002; 539(Pt 1):295-308.
