UC Davis Medical Group offers nationally renowned primary care and specialty expertise based at UC Davis Medical Center and multiple medical offices across the greater Sacramento region. Medical group physicians, nurse practitioners and clinical nurse specialists emphasize wellness and prevention, apply the latest knowledge to solve health problems and offer access to promising clinical trials, newly proven therapies and advanced technologies when needed.

FOR PATIENTS
Find a UC Davis physician, nurse practitioner or clinical nurse specialist
Consumer Resource Center: 800-2-UCDAVIS (800-282-3284)

- General information about available providers and services
- Assistance with appointments and referrals
- Information about accepted insurance plans

Established UC Davis patients can also use the MyChart web-based portal to communicate with their care teams, request certain appointments and refills, access medical records and more.

FOR HEALTH PROFESSIONALS
Outpatient referrals and provider phone consultations
UC Davis Physician Referral Center: 800-4-UCDAVIS (800-482-3284) Option #2 Monday | Friday, 8 a.m. to 5 p.m. Or online (non-urgent) requests via referrals.ucdavis.edu

- Information about availability of specialty services
- Coordination and status of referrals to specialty services
- Assistance for provider-to-provider phone consultations with specialists

Acute interfacility transfers and after-hours consultations
24/7 Transfer Center: 800-4-UCDAVIS (800-482-3284)

- Round-the-clock, R.N.-led coordination of acute interfacility transfers
- After-hours coordination of emergent provider-to-provider telephone consultations for complex or unusual cases
- Transfer requests evaluated based upon clinical urgency, availability of resources and other factors

Referring physicians can receive real-time access to test results and clinical information for their patients at UC Davis through the PhysicianConnect online electronic medical record.
Mehrdad Abedi welcomes LGBT patients.

**Clinical Interests**
Dr. Abedi's clinical interest is in the area of bone marrow transplantation and in the treatment of refractory/relapsed hematological malignancies. His basic science research interest is in the area of hematopoietic stem cells and novel models of bone marrow transplantation.

Dr. Abu Aboud's research focuses on discovering novel diagnostic and therapeutic targets for solid tumors such as kidney cancer and for other hereditary kidney diseases such as polycystic kidney disease. He approaches these goals by utilizing omics approaches (metabolomics, proteomics and genomics) and developing animal models for these diseases.

Dr. Abu Aboud is also interested in metabolic reprogramming in cancer to validate and use amino acids as molecular imaging agents for PET scanning.

Alaa M. Afify, M.D.

**Philosophy of Care**
Dr. Afify's philosophy is that patient care comes first under all circumstances, and never to delay any work.

**Clinical Interests**
Dr. Afify's subspecialty is cytopathology, including fine-needle aspiration cytology, body fluids and Pap tests. He is a recognized expert in performing and evaluating fine-needle aspiration biopsies. Other areas of expertise include gynecologic and endocrine pathology.

**Research/Academic Interests**
Dr. Afify has research interests in hyaluronan and its receptor, CD44. He is researching the role of CD44 on cancer, including its effects on cell migration, invasion and proliferation. Recently, his lab is developing immunoliposomes that will target specific cancer cells.

A major theme of Dr. Beckett's research since 1987 has been the public health impact of chronic diseases of aging, especially Alzheimer's disease (AD). She led statistical efforts for the first population-based estimate of the number of people with AD in the US: 4 million.

As Director of the ADNI Biostatistics Core, Dr. Beckett has also served as external advisor for 3 additional ADC's and for the AD prevention initiative, the CAMD biomarker initiative, the NINDS Parkinson's disease biomarker development committee, and the national Autism Biomarker Consortium for Clinical Trials.

Dr. Beckett has a strong interest in Cancer Research. Her collaborations span the field from basic science to clinical trials to care-giving and community-based research. She has directed the UC Davis Comprehensive Cancer Center's Biostatistics Shared Resources since its inception in 2000. Dr. Beckett's work builds on strong mathematical training and an interest in applying discrete mathematical tools creatively to biomedical research.

Dean's Team Award for Inclusion Excellence: Research, 2017
Mentor Award from School of Medicine. Outstanding Research by a Trainee, Academy of Breastfeeding Medicine., 2017
Poster won first prize at Cancer Center 17th Annual Cancer Research Symposium., 2013
Fellow, American Statistical Association., 2004

The American Association of Physicists in Medicine states that the essential responsibility of a Qualified Medical Physicist’s clinical practice is to assure the safe and effective delivery of radiation to achieve a diagnostic or therapeutic result as prescribed in patient care.

The responsibilities of the medical physicist include: protection of the patient and others from potentially harmful or excessive radiation; establishment of adequate protocols to ensure accurate patient dosimetry; the measurement and characterization of radiation; the determination of delivered dose; development and direction of quality assurance programs; and assistance to other health care professionals in optimizing the balance between the beneficial and deleterious effects of radiation; and compliance with applicable federal and state regulations.

As Chief of Clinical Physics Dr. Benedict works with a team of highly qualified medical physicists and dosimetrists, in accordance with the directives of radiation oncology physicians, to provide a wide array of highly conformal radiation therapy treatments.

A few of the systems that we employ to ensure precise set-up patient positioning, and accurate delivery include: 3D and 4D simulation and delivery confirmation, image guided brachytherapy, stereotactic radiosurgery, and intensity modulated beam delivery techniques.

1. Developing imaging tools to improve radiation therapy planning co-registration of studies for the accurate determination of tumor and target margins and critical organs at risk (OAR), including the use of MRI-PET, PET-CT, and SPECT-CT.
2. Developing technology for image guided brachytherapy (IGBT), including 3D imaging systems (CT and MRI) for confirming applicator placement, and novel applicator designs that allow patients to be treated with minimal anesthesia (non-OR).
3. Investigating radiobiological considerations for Hypofractionated and Stereotactic Radiosurgery treatment delivery.
4. Designing new arc based treatment delivery approaches that incorporate modulation (gantry speed, dose rate, and MLC) for conformality, and 3D/CBCT for improved target positioning.

Arnaud Fassett Bewley, M.D.

Arnaud Fassett Bewley welcomes LGBT patients.

**Philosophy of Care**

Dr. Bewley believes in taking time to build trusting relationships with his patients in order to effectively guide them through the often challenging and intense treatment necessary to combat head and neck tumors.

**Clinical Interests**

Dr. Arnaud Bewley is a fellowship trained head & neck cancer and reconstructive surgeon whose practice focuses on the comprehensive management of tumors of the head and neck. This primarily involves the surgical management of benign and malignant tumors of the face, mouth, throat, neck, and thyroid. He has a special interest in using microvascular free-flap techniques to reconstruct defects caused by tumor removal, in order to maximize a patient’s post-operative function. In addition, he has a particular interest in using minimally invasive transoral robotic techniques to treat cancers of the tonsil, base of tongue and larynx.

**Research/Academic Interests**

HPV+ tumors of the oropharynx: Developing and participating in protocols for de-escalation of treatment for HPV+ head and neck cancer

Transoral robotic surgery: Using minimally invasive transoral techniques to remove head and neck tumors and potentially avoid the toxicity of chemotherapy and radiation therapy.

Cost of care for head and neck cancer: Identifying underlying factors contributing to increases in the cost of care for head and neck cancer patients and designing protocols that promote cost-effective utilization of health care resources.

Education & Simulation: Developing novel simulations to train residents in the management of acute and emergency clinical scenarios

Dr. Boggan heads a specialty team that treats difficult-to-resect tumors of the head, neck and surrounding structures. He also is an expert in pediatric neurosurgery.

Dr. Boggan is interested in the innovative use of lasers and other energy sources for treating brain cancers, including photodynamic therapy and neutron-capture therapy for treatment of glioblastomas. His research investigations include retinoic acid receptor expression in primary and metastatic brain tumors, and whether gadolinium texaphyrins (contrast MRI agents) can make high-grade gliomas and glioblastomas more radiosensitive.

Richard J. Bold welcomes LGBT patients.

**Philosophy of Care**  
I believe in a team-based approach for the development of a personalized treatment plan.

**Clinical Interests**  
A researcher as well as a surgical oncologist, Dr. Bold is an expert in pancreatic and hepatobiliary cancers, breast cancer and the application of minimally invasive surgical techniques for patients with cancer. He has implemented a variety of minimally invasive surgical techniques to treat patients with benign or malignant tumors. These include the sentinel lymph-node biopsy procedure for women with breast cancer and a variety of laparoscopic procedures for abdominal tumors, including laparoscopic adrenalectomy, splenectomy and pancreatectomy.

**Research/Academic Interests**  
Dr. Bold is a key member of a multidisciplinary breast cancer research team involving experts from radiology, nuclear medicine, and biomedical engineering working to improve breast cancer detection and better guide surgical intervention. He also oversees an active basic-science laboratory investigating mechanisms of resistance to traditional chemotherapy as well as testing new treatments for detecting and treating cancer.

Dr. Bold has published extensively in the areas of apoptosis, metastasis, and the cellular biology of pancreatic and lung cancers. He is an integral member of the Clinical Trials Group at the UC Davis Comprehensive Cancer Center.

John M. Boone, Ph.D.

Research/Academic Interests

John M Boone PhD is professor of radiology at the University of California Davis, and holds an appointment in the department of biomedical engineering as well. He received his undergraduate degree in biophysics at UC Berkeley, and finished his graduate work in medical physics at the University of California Irvine. He is board-certified by the American Board of Radiology in diagnostic radiological physics.

Dr. Boone has had many research interests, but has focused recently on breast dosimetry and the development of breast computed tomography (bCT) for breast cancer screening and diagnostic evaluation. His lab has designed, fabricated and tested four prototype breast CT scanners, and over 600 women have been scanned on these systems. His research on breast CT has focused on technical development, clinical assessment, observer performance and mathematical image characterization.

Dr. Boone is co-author of the medical imaging textbook, the Essential Physics of Medical Imaging, and is a commissioner of the International Commission on Radiation Units (ICRU). He is a fellow of the American Association of Physicists in Medicine (AAPM), the American College of Radiology (ACR), the Society of Breast Imaging (SBI), the American Institute for Medical and Biological Engineering (AIMBE), and the Society of Photo-optical Instrumentation Engineering (SPIE).

Dr. Brodie has a subspecialty practice in otology and neurotology. His clinical focus is in hearing loss and various diseases affecting the middle and inner ears. Together with Dr. Karen Doyle, he works with a team of audiologists, speech pathologists and physical therapists to provide comprehensive programs in cochlear implantation and in the treatment of vestibular disorders.

Dr. Brodie is engaged in research related to understanding the underlying mechanisms of a disease called labyrinthitis ossificans, in which new bone forms in the inner ear following diseases such as meningitis, skull fractures, and various inflammatory diseases.

The significance of this research involves future cochlear implantation. If a child is deafened by meningitis and the cochlea fills with new bone, insertion of a cochlear implant is hindered. Understanding the mechanisms of bone deposition will hopefully allow for inhibition of the process and thereby maintain a patent cochlea.

Clinical Interests

Dr. Brodie has a subspecialty practice in otology and neurotology. His clinical focus is in hearing loss and various diseases affecting the middle and inner ears. Together with Dr. Karen Doyle, he works with a team of audiologists, speech pathologists and physical therapists to provide comprehensive programs in cochlear implantation and in the treatment of vestibular disorders.

Research/Academic Interests

Dr. Brodie is engaged in research related to understanding the underlying mechanisms of a disease called labyrinthitis ossificans, in which new bone forms in the inner ear following diseases such as meningitis, skull fractures, and various inflammatory diseases.

The significance of this research involves future cochlear implantation. If a child is deafened by meningitis and the cochlea fills with new bone, insertion of a cochlear implant is hindered. Lisa M. Brown welcomes LGBT patients.

**Clinical Interests**
Dr. Brown specializes in General Thoracic Surgery, with a particular interest in thoracic surgical oncology, including cancers of the lung, esophagus, chest wall, and thymus. She also has an interest in the treatment of benign esophageal disease including paraesophageal hernia, GERD, and achalasia.

Dr. Brown has had extensive advanced training using minimally invasive techniques including thoracoscopic (VATS), laparoscopic, endoscopic, and robotic surgery.

**Research/Academic Interests**
Dr. Brown has a Master's of Advanced Study degree in Clinical Research. She is interested in outcomes research including retrospective and prospective cohort studies, cost-effectiveness analyses, and clinical trials. She is developing research foci on patient-centered outcomes and lung cancer in women.

Barbara Ann Burrall welcomes LGBT patients.

**Philosophy of Care**

Dr. Burrall finds dermatology very interesting - and fun - because it combines the study of many diverse fields of medicine. With dermatologic disease, treatment decisions are often influenced by the patient's feelings about the disease, so she tries to include her patients actively in the decision-making process and the treatment plan. Good dermatological health requires avoidance of excessive sun exposure. Using good sun protection also proves extremely beneficial. Overall good patient care necessitates cooperation among different specialists and the primary care doctor, a good working relationship that focuses on the patient. Dr. Burrall has been associated with UC Davis since 1981, and enjoys collaborating with physicians from many other specialties to provide outstanding care for her patients.

**Clinical Interests**

Dr. Burrall finds dermatology very interesting - and fun - because it combines the study of many diverse fields of medicine. Since treatment decisions about dermatologic disease are often influenced by the patient's feelings about the disease, she tries to include her patients actively in the decision-making process and the treatment plan. She offers computer-imaging body mapping of moles to track changes.

My philosophy of care is to treat every patient how I would want my own family treated. I believe that each patient deserves to be taken care of with compassion, respect, and a commitment to deliver the best care possible. I am dedicated to providing a multidisciplinary approach for my patients bringing together the vast resources of the UC Davis Health System to formulate a shared, patient-centered plan. There is no “simple” operation when you are the patient.

Dr. Campbell is a fellowship-trained endocrine surgeon who specializes in the surgical treatment of patients with thyroid, parathyroid, adrenal and pancreatic disorders. He is an expert in minimally invasive parathyroid and thyroid surgery as well as complex laparoscopic adrenal surgery. He offers a wide range of unique services including transabdominal laparoscopic adrenalectomy; minimally invasive and reoperative thyroid and parathyroid surgery; lymph node dissection using blue dye localization; and ethanol ablation of recurrent thyroid cancer.

Dr. Campbell’s research interests include improving multidisciplinary care for endocrine patients; patient outcomes following thyroid surgery; recurrent and persistent hyperparathyroidism; and familial endocrine disorders (such as multiple endocrine neoplasia).

Ching-Hsien Chen, Ph.D.

Clinical Interests
Dr. Chen has had a passion for understanding and improving the treatment of neoplastic diseases. She has established close collaborations with physician scientists to discover novel useful biomarkers that stratify clinicopathological subtypes of solid tumors. These biomarkers will be used to predict treatment outcomes of cancer patients undergoing clinical trials with combined inhibitors specifically targeting aberrant oncogenic signaling.

Research/Academic Interests
Dr. Chen’s research strives to elucidate the molecular mechanisms underlying human diseases and thereby identify useful biomarkers and druggable targets in a broad range of malignancies. In the last five years, her studies have revealed multiple oncogenic complexes and have also developed the peptide-based therapeutics to mitigate cancer metastasis and drug resistance. Currently, the research foci of Dr. Chen’s laboratory are 1) to discover potential therapeutic targets in renal cell carcinoma and polycystic kidney disease using integrated -omics data, genetic manipulations and pharmacological approaches; 2) to develop clinically viable methods of ex-vivo expansion and activation of tumor propagating cells. In addition, Dr. Chen is actively engaging in the feasibility of PIP2 retention strategies on controlling cancer progression and increasing the efficacy of chemo- or immunotherapy.

Moon S. Chen, Jr. welcomes LGBT patients.

Moon S. Chen, Jr., Ph.D., M.P.H. is a nationally renowned expert in cancer health disparities, particularly as they affect Asian-American populations. He is UC Davis Comprehensive Cancer Center's Associate Director for Cancer Control, leading a portfolio of research that addresses determinants of cancer risk and their mitigation in human populations. Determinants include access to care, behaviors (e.g., tobacco use, screening, etc.), socio-cultural factors, and the interactions of individuals with their environment and the health-care system.

Additionally, Chen oversees shared resources for cancer epidemiology, which includes leveraging the California Cancer Registry, the world's largest registry of cancer data in a single geographical entity with the richest diversity of data on cancer in diverse racial/ethnic populations. Chen also oversees shared resources for the cancer biorepository, an increasingly important source of biospecimens for investigating cancer causes. He serves as a liaison with the California Department of Public Health, Kaiser Permanente Division of Health, and other external agencies.

Jong Hee Chung, M.D.

Jong Hee Chung welcomes LGBT patients.

Clinical Interests
Dr. Chung specializes in the treatment of children with cancers and blood disorders, with a particular focus on hemoglobinopathies, including sickle cell anemia and thalassemia.

Research/Academic Interests
Dr. Chung's research interests are focused on improvements in supportive care and quality of life for children with hemoglobinopathies.

Dr. Coates has clinical interests in women's imaging, including obstetrical and breast imaging. Her primary focus is currently Breast Imaging, including tomosynthesis, mammography, ultrasound, breast MRI and the interventional procedures associated with these. She also has extensive experience in abdominal imaging, obstetrical ultrasound and musculoskeletal ultrasound. Dr. Coates has researched diagnostic techniques for evaluating flexor tendon injuries and the use of abdominal ultrasound in acute trauma patients. Other research projects include chromosomal studies of fetal cysts, ultrasound of the breast and postmenopausal pelvis, and new contrast agents designed for imaging the gastrointestinal tract, lymphatic system and malignant breast tumors.

Matthew A. Coleman, Ph.D.

Clinical Interests

Dr. Coleman is pursuing research to identify the cellular mechanisms associated with ionizing radiation (IR) exposures. This work relies on using genomic and proteomic techniques to identify and characterize transcriptional networks, such as TP53, MYC and NF-kB, that play a role in controlling cell fate in response to IR exposures. Importantly, these regulatory pathways are also utilized by the cell for cancer progression. Such information can be utilized for developing diagnostic assays and tools for biodosimetry as well as the treatment and prevention of cancer.

Dr. Coleman is also very active in the development of advance biochemical techniques using nanoparticles made of apolipoproteins and phospholipids called nanolipoprotein particles (NLPs). NLPs closely mimic the cellular membrane bilayer, and represent an ideal platform for characterizing membrane proteins involved in signal transduction. For example, NLPs are proving useful for the characterization of the structure and function of G-protein coupled protein receptors. NLPs are also proving useful for drug delivery, immuno-modulation and in vivo imaging in the treatment of cancer.

Steven Douglas Colquhoun welcomes LGBT patients.

**Philosophy of Care**

My goal is to provide the care and advice that I would want for myself or my family. I pride myself on considering all options for the treatment of any condition, not just those that are surgical. I also pride myself on listening to patients and their families. Having any medical problem is difficult, navigating health care should not add to that problem. I also try always to be available for questions as oftentimes they arise between visits.

**Clinical Interests**

Dr. Colquhoun is a surgeon specializing in cancer of the liver, liver, biliary and pancreatic surgery. He completed fellowship training in both transplantation and surgical oncology at UCLA. He is board certified in both surgery and critical care.

Dr. Colquhoun was the director of the Liver Transplant and Pancreaticobiliary Surgery Program at Cedars-Sinai in Los Angeles for 20 years. He was also director of transplantation at the University of Southern California.

His clinical and research interests involve both primary and metastatic liver tumors, including hepatocellular carcinoma, cholangiocarcinoma, colorectal malignancies and neuroendocrine tumors. He has extensive experience in pancreatic malignancies as well.

**Research/Academic Interests**

Dr. Colquhoun is involved in clinical and translational research aimed at improving both the diagnosis and treatment of hepatocellular carcinoma as well as other primary and metastatic liver tumors such as colorectal cancer and neuroendocrine tumors.

Cancer Pain Management and Supportive Care - Using all means necessary to reduce pain, improve function and the quality of our patient's lives.

Cancer Pain Management and Supportive Care

Philosophy of Care

Pain Medicine Education and Telementoring - Improving pain care across the state of California and beyond through the use of technology.

Clinical Interests

Dr. Copenhaver is a board certified anesthesiologist and pain medicine specialist and faculty in the Anesthesiology and Pain Medicine at UC Davis Health Center.

Dr. Copenhaver is the director of Cancer Pain Management and Supportive Care Program in addition to the Pain Medicine Telehealth program at UC Davis.

Dr. Copenhaver has research interests in health services administration, pain medicine education, responsible opioid management, targeted drug delivery, and the applied use of stem cells in the setting of intervertebral disc disease.

Copenhaver completed his undergraduate degrees in Neuroscience, Physiology and Behavior at UC Davis. He subsequently went on to UCLA to complete his medical school education and a master's degree in public health. Dr. Copenhaver completed his residency in Anesthesiology at Columbia University College of Physicians and Surgeons and his pain medicine fellowship at UC Davis.

Marc A. Dall'Era welcomes LGBT patients.

**Clinical Interests**

Dr. Dall'Era specializes in the management of malignant disease of the urinary tract. The specialty care Dr. Dall'Era offers includes:

- Multi-disciplinary and comprehensive care of patients with urologic malignancy
- Active surveillance for low risk prostate cancer
- Multi-parametric MRI/US fusion targeted prostate biopsy
- Blue Light Fluorescent cystoscopy for bladder cancer with Cysview
- Minimally invasive and robotic surgery of the kidney and prostate including prostatectomy, partial nephrectomy, pyeloplasty/ureteral reconstruction
- Radical cystectomy and neobladder creation
- Advanced genomics testing of urologic cancers

**Research/Academic Interests**

Dr. Dall'Era's research interests include active surveillance for prostate cancer including utilization of mp-MRI and biomarker discovery and validation. He is also involved in translational research for urothelial cancer diagnosis and management including advanced genomics analysis of bladder tumors.

Megan E. Daly welcomes LGBT patients.

**Philosophy of Care**

I believe in treating cancer aggressively while maintaining my patients’ quality of life and well-being. I feel that cancer treatment is a partnership between each patient and the team of specialists providing care. My goal is for my patients to fully understand all treatment options and to feel completely comfortable with their treatment decisions.

**Clinical Interests**

Dr. Daly has a clinical focus on the treatment of thoracic malignancies, lymphoma, and head and neck cancers. She specializes in a variety of radiotherapy techniques including stereotactic body radiotherapy (SBRT), intensity modulated radiation therapy (IMRT), and image guided radiation therapy (IGRT).

**Research/Academic Interests**

Dr. Daly’s research interests focus on the use of stereotactic body radiotherapy for the treatment of early-stage lung cancer, metastatic lesions to the lung, and for primary and metastatic tumors of the spine. She also has a research interest in head and neck cancer, specifically in the use of advances in image guidance and conformal treatments to allow dose escalation while sparing normal tissues and reducing the side-effect profile of radiation treatment.

Elizabeth A. David, M.D., MAS, FACS

Dr. David specializes in General Thoracic Surgery, with a particular interest in the management of advanced stage lung cancer. She is interested in minimally invasive thoracic surgery, including robotic surgery; tracheal and airway procedures; esophageal resection and stenting; palliative oncologic procedures and other procedures for benign conditions of the thoracic cavity.

Clinical Interests

Her research includes surgical outcomes/health services research, patient-centered outcomes research, and decision-making. Dr. David's research goals are focused on surgical outcomes of treatment for patients with stage IIIA, IIIB, IV lung cancer and treatment decisions for advanced stage lung cancer patients.

Ralph W. de Vere White, M.D.

Dr. de Vere White is the Senior Advisor Emeritus, and Emeritus Distinguished professor of urology. Prior to retiring, he served as the associate dean for cancer programs at UC Davis School of Medicine, director of the UC Davis Comprehensive Cancer Center and was a distinguished professor of urology. He received his medical degree from Dublin University in Dublin, Ireland, and completed an internship and residencies in surgery and urology at St. Vincent’s Hospital in Dublin and at Duke University Medical Center in Durham, NC.

The author of more than 300 peer-reviewed scientific articles and book chapters, Dr. de Vere White has served on the editorial boards of six international scientific journals. Post-retirement, his research efforts are now focused on the molecular events that govern the response of prostate and bladder cancer to targeted therapies, the biomolecular mechanisms that make some prostate cancers more virulent than others, and new methods of diagnosing and treating prostate cancer. He is the past president-elect of the Society of Urologic Oncology, a member of the Clinical Society of Genitourinary Surgeons and an elected member of the prestigious American Association of Genitourinary Surgeons. He has been named multiple times as one of "The Best Doctors in America" and is one of four urologists serving as a volunteer consultant to the American Cancer Society's on-line "Experts Answers" bulletin board for questions about prostate cancer.

Elva Denise Diaz, Ph.D.

Elva Diaz's research interests include functional genomics of nervous system development.
Her lab's main research interest is to understand molecular mechanisms of neural development
using a rodent model system. In particular, she is interested in two areas: neural proliferation and
synapse development.

The Diaz lab used DNA microarrays as a tool to identify genes that are developmentally regulated
during postnatal cerebellum development. Members identified several candidate molecules that
increase in gene expression during the period of neural proliferation or synapse formation, and are
currently studying the role of two molecules (Mad3 and synDIG1) in these processes.

Synopsis:

Mad3 and neural proliferation:
During development, Sonic hedgehog (Shh) regulates the proliferation of cerebellar granule neuron
precursors (GNPs) in part via expression of Nmyc. My lab has demonstrated a novel role for the
Myc/Max/Mad family member Mad3 in the Shh pathway to regulate Nmyc expression and
cerebellar GNP proliferation. Mad3 mRNA is transiently expressed in GNPs during proliferation.
Cultured GNPs express Mad3 in response to Shh stimulation in a cyclopamine-dependent manner.
Mad3 is necessary for Shh-dependent GNP proliferation as measure by BrdU incorporation and
Nmyc expression. Furthermore, overexpression of Mad3, but not other Mad proteins, is sufficient
to induce GNP proliferation in the absence of Shh. Interestingly, cerebellar tumors and pre-tumor
cells derived from patched (ptc) heterozygous mice express high levels of Mad3 compared with
adjacent normal cerebellar tissue. These studies support a novel role for Mad3 in cerebellar GNP
proliferation, and possibly tumorigenesis, and challenge the current paradigm that Mad3 should
antagonize Nmyc by competition for direct DNA binding via Max dimerization. Our current
research aims are: 1) to identify Mad3 target genes in GNPs and tumor cells using chromatin
immunoprecipitation (ChIP) coupled to DNA microarrays (ChIP-on-chip); 2) to identify Mad3
interacting proteins using biochemical, genetic and proteomic approaches; and 3) to understand
the role of Mad3 in tumor formation using in vivo mouse models.

SynDIG1 and synapse formation:
During development, synapse formation relies on signaling between pre- and postsynaptic neurons
and the expression of specific genes. Synapse Differentiation Induced Gene (SynDIG1) was
identified as a gene upregulated during synapse development whose upregulation failed in a
mutant mouse line with defects in synaptic differentiation. We have shown that SynDIG1 encodes
a novel, postsynaptic transmembrane protein that is a critical regulator of synapse development in
cultured hippocampal neurons. Interestingly, SynDIG defines a family of four genes within the
mouse genome that are expressed in distinct and partially overlapping cell types within nervous

system tissues. Intriguingly, overexpression or knock-down of synDIG1 in cultured neurons alters the electrophysiological properties of excitatory synaptic transmission, presumably by the altered trafficking of AMPA receptors. Our current research aims are: 1) to characterize mice with a conditional deletion of the SynDIG1 gene; 2) to identify SynDIG1-interacting proteins; and 3) to test if SynDIG1 is subject to activity-dependent regulation at synapses.

Clinical Interests
I specialize in the medical physics of complex treatments and small-field dosimetry, with vast experience in frameless stereotactic radiosurgery and stereotactic body radiotherapy and an interest in image-guided high-dose-rate (HDR) brachytherapy. My clinical research interests include improving image-guidance in HDR brachytherapy and in-vivo dosimetry to validate new dose calculation algorithms. As a medical physicist, I collaborate closely with physicians to determine the best use of advanced technology for each individual situation and contribute my technical expertise to support our patients' fight against cancer.

Christopher P. Evans welcomes LGBT patients.

**Philosophy of Care**

Dr. Evans' philosophy of care is to:

- fully assess the patient's medical condition, including how it relates to family and social circumstances;
- educate the patient fully about their disease process; and
- include the patient in the decision-making process that best suits the outcomes they seek.

In each case he looks for opportunity to enroll them in any new therapies or clinical trials that may be available and pertinent.

**Clinical Interests**

Dr. Evans' practice is dedicated to the management of patients with urologic malignancies. He works with medical oncologists and radiation oncologists to provide multimodal approaches to cancer therapy.

His surgical expertise includes robotic assisted laparoscopic radical prostatectomy with nerve sparing, complex renal surgery to include partial nephrectomy and vena cava thrombectomy, cystectomy with extended pelvic lymph node dissection and urinary diversion with orthotopic neobladders.

Dr. Evans also has expertise in treating patients with metastatic testicular cancer and performing retroperitoneal lymph node dissection in post chemotherapy patients.

**Research/Academic Interests**

Dr. Evans' research laboratory focuses on prostate cancer; specifically, mechanisms signaling the androgen receptor to activate prostate cancer growth and progression following castration. His laboratory has developed models to study this and has identified novel mechanisms that activate the androgen receptor.

His laboratory work has tested new agents and brought them from bench studies to animal models to clinical trials.

Nathan Paul Fairman welcomes LGBT patients.

**Clinical Interests**

Dr. Fairman is board-certified in general psychiatry, with subspecialty certification in hospice and palliative medicine. He is currently an assistant professor in the Department of Psychiatry and Behavioral Sciences at the UC Davis School of Medicine. He holds appointments in psychosomatic medicine and palliative care, serving as an attending physician on both consult services at the UC Davis Medical Center. In addition, he sees patients in the psycho-oncology clinic at the UC Davis Comprehensive Cancer Center. Dr. Fairman is also a faculty associate in the Bioethics Program in the UC Davis School of Medicine. Dr. Fairman has a variety of teaching responsibilities throughout the UC Davis Health System, focused primarily on palliative care, communication, and bioethics.

Dr. Farnham has research interests in human genomics, transcriptional regulation in cancer and embryonic stem cells, and chromatin structure. The Farnham laboratory has been a leader in developing the technique of chromatin immunoprecipitation (ChIP) to study mammalian transcription factors. Recently, they have extended these studies to allow a high throughput, global analysis of transcription factor target genes by combining chromatin immunoprecipitation with genomic microarray hybridization (ChIP-chip assays) and with high throughput sequencing (ChIP-seq). Current projects include the analysis of chromatin structure in embryonic stem cells and other normal and tumor cell types and the genome-wide identification of target genes of a variety of human transcription factors. In addition to bench work, the Farnham lab is also developing programs to assist in the analysis of genome-scale ChIP-chip and ChIP-seq data and to derive consensus motifs from experimentally identified binding sites. Dr. Farnham is a member of the ENCODE Consortium, whose goal is to map all the functional elements in the human genome. She is also a member of the recently funded NIH Roadmap UC Reference Epigenome Mapping Center; her lab will be determining the histone modifications for a variety of different human cell types.

D. Gregory Farwell, M.D., FACS

D. Gregory Farwell welcomes LGBT patients.

I take great pride in offering our patients the highest quality of care that is based on the latest research and cutting edge technologies. Whether it is our minimally invasive approaches to thyroid and parathyroid surgeries, the use of the robot in cancer treatment, or our comprehensive reconstructive techniques, I strive to do everything possible to treat my patients in a manner that gives them their absolute best chance of cure while optimizing their functional and cosmetic results.

Philosophy of Care

Dr. Farwell's clinical practice has centered on the comprehensive management of head and neck malignancies including thyroid and parathyroid surgery. He has special interests in laser and robotic microsurgery of upper aerodigestive tract tumors and reconstructive surgery after traumatic and oncologic defects. His comprehensive approach to patient care allows the entire gamut of reconstructive surgery to be utilized to optimize his patients functional and cosmetic results. He has worked extensively on improving patient functional outcomes with microvascular organ replacement strategies and rehabilitation with coordinated speech and swallowing therapies available here at UC Davis.

His research endeavors include multiple collaborations with the UC Davis Department of Biomedical Engineering working on noninvasive and minimally invasive technologies to diagnose neoplasms, novel and improved PET tracers, unique approaches to therapeutic drug delivery to neoplasms, and high-resolution imaging technologies. He also works closely with colleagues in the Department of Radiation Oncology to evaluate novel treatment strategies to minimize radiation side effects and maximize patient functional outcomes.

Clinical Interests

Our first line of research is an RO1 NIH Grant evaluating noninvasive fluorescence assay of tissue during robotic surgery to improve cure and maximize function in patients with cancers of the tongue and tonsil. This has tremendous potential to improve our ability to complete remove tumor while allowing us to leave as much normal tissue behind to improve our patients' quality of life. We are training and evaluating the ability of dogs to sniff and detect tumor. This has amazing implications for screening programs to detect tumors earlier.

We are also working on multidisciplinary research looking at thyroid cancer to better understand patients at high risk for aggressive disease so that we can customize our treatment to each patient.

Undergoing radiation treatments can be scary and overwhelming. Each patient has a unique situation involving their specific diagnosis and the treatment of their disease. It is important to recognize the patient's unique issues in order to provide care for the patient as a whole person. It is also important to help patients understand their diagnosis so that they can make more informed decisions and understand their care.

Dr. Fragoso's main clinical activities involve the treatment of both benign and malignant central nervous tumors that can arise in the adult and pediatric populations. Radiation treatment techniques include Gamma Knife radiosurgery and fractionated radiation radiotherapy (3D or IMRT). Medical interests revolve around the better understanding of gliomas, particularly high grade gliomas. Glioblastoma multiforme (GBM), a WHO grade IV glioma, carries a poor prognosis for which there have been modest therapeutic advances. My area of interest and research is focused on targeting specific cancer cells that are thought to perpetuate the tumor within the GBM itself. These cancer stem cells tend to be resistant to treatment. We are studying ways in which these cells can be targeted specifically and destroyed.

I aspire to have patients leave my office with a firm understanding of their disease process and a management plan, working in partnership with the patient and University team to achieve the best possible outcomes.

Dr. Fuller’s clinical practice is devoted to the comprehensive management of head and neck disease with particular attention to benign and malignant lesions of the upper aerodigestive tract, advanced malignancies of the skin, salivary gland tumors, and cancers abutting or invading the cranial base. In addition to caring for those with head and neck malignancies, Dr. Fuller has developed a profound interest in the surgical management of obstructive sleep apnea which allows him to tailor surgical intervention to patient specific anatomic targets.

Dr. Fuller’s research interests include functional outcomes in the management of head and neck malignancy and obstructive sleep apnea.

Title
Assistant Professor, Department of Otolaryngology
Otolaryngology Division Chief- VA Northern California Healthcare System
Director- Head and Neck Oncologic surgery VA NCHCS

Specialty
Otolaryngology (ENT/Ears, Nose, Throat)

Division
Head and Neck Surgery

Center/Program Affiliation
UC Davis Comprehensive Cancer Center

Address/Phone

Maxwell A. Fung, M.D.

Maxwell A. Fung, M.D. (Director) is Board-certified in Dermatology and Dermatopathology and has been engaged in the full-time practice of academic medicine as an attending physician for 18 years. Dr. Fung wears two patient care hats: one as a dermatopathologist who interprets skin biopsy specimens, and one as a dermatologist evaluating patients at the bedside (currently by physician-to-physician consultation only).

His original research focuses on ways to improve diagnostic accuracy and communication between practicing dermatologists and dermatopathologists in ways that are practical and of immediate clinical relevance (eosinophils, alopecia, dermal hypersensitivity, dysplastic nevus, epidermotropism). Dr. Fung also enjoys collaborating with world class scientists in basic research endeavors (comparative transcriptomics, nanoparticles, galectin-3).

David R. Gandara welcoming LGBT patients.

Dr. Gandara’s research interests focus on developmental therapeutics of new anti-cancer agents as well as preclinical modeling and clinical research in lung cancer. He is the principal investigator on an Early Therapeutics award from the National Cancer Institute (NCI), where he leads an interdisciplinary team of clinical oncologists, pharmacologists, molecular biologists and statisticians in developing new anti-cancer agents in a variety of novel drug classes. He also leads a multi-specialty team in the Southwest Oncology Group (SWOG), an NCI-funded national clinical research organization, in studies related to improving therapies for lung cancer and developing predictive biomarkers of therapeutic efficacy.

Dr. Gandara is also the UC Davis principal investigator for a multi-institutional collaboration (iGXT: integrated Genetically-engineered mouse models, patient-derived Xenografts, and Clinical Trials) between the NCI Center for Advanced Preclinical Research (CAPR) and Jackson Laboratory, an NCI-designated basic cancer center. The goal of this iGXT project is to develop better preclinical models to optimize cancer drug development and speed the transition to personalized cancer therapy.

Shi XB, Xue L, Zou JX, Gandour-Edwards R, Chen H, deVere White RW. Prolonged androgen receptor loading onto chromatin and the efficient recruitment of p160 coactivators contribute to androgen independent growth of prostate cancer cells. The Prostate 68:1816-1826. 2008 (PMID: 18780293)

Allen Gao, M.D., Ph.D.

Clinical Interests
Dr. Gao's research interests focus on understanding molecular mechanisms associated with progression of castration-resistant prostate cancer and metastasis to bone with the goal of identification of potential therapeutic targets for prostate cancer. Particular emphasis includes microRNAs, aberrant androgen receptor activation by cytokines and transcriptional factors such as Stat3 and NF-κB, selenium chemoprevention and therapy, and targeting cell signaling pathways (AR, IL-6 and Stat3) in prostate cancer. Dr. Gao's lab was among the first to find that selenium regulates androgen signaling, find that IL-4 activates androgen receptor mediated by NF-κB and Stat6, made the discovery that IL-6 signaling in prostate cancer involves Stat3, and defined Stat3 and NF-κB interactions in prostate cancer. Dr. Gao has published over 60 peer-reviewed articles on the area of prostate cancers. Dr. Gao has served numerous NCI, DOD, and VA merits, and ACS review panels including SPORE and PPG study sections.

Sepideh Gholami welcomes LGBT patients.

**Philosophy of Care**

Dr. Gholami believes in an innovative, individualized, multi-disciplinary treatment approach to provide the most compassionate, highest quality of cancer care for her patients and their families.

**Clinical Interests**

Dr. Gholami is a board-certified surgeon scientist with dual fellowship training in Complex General Surgical Oncology and Hepatopancreatobiliary Surgery. She believes in precision-medicine using evidence-based best practice to develop a personalized treatment plan for each patient.

Dr. Gholami specializes in surgeries of the gastrointestinal tract, liver, biliary tree, and the pancreas. Her clinical interests include innovative approaches to cancer care including minimally invasive surgery and robotic techniques as well as liver-directed therapies/regional therapies in patients with hepatobiliary and metastatic malignancies.

**Research/Academic Interests**

Dr. Gholami's research focus includes translational science and clinical trials to advance the understanding of hepatobiliary and pancreas tumor genetics, microenvironment, and immune profiling. She believes in innovative, personalized medical treatment through stratifying tumors on their genetic and immunologic features to achieve the best oncologic outcomes and highest quality of care.

Dr. Gholami has extensive research experience in vaccine and targeted therapies which have resulted in multiple publications and clinical trials. She is currently involved in developing clinical trials with novel therapeutics related to immune-activating agents as well as targeted therapies in combination with liver-directed/regional therapies in patients with hepatobiliary malignancies. In addition, Dr. Gholami is interested in clinical outcomes research to improve medical care related to cancer surgery at the National level.

Paramita M. Ghosh, M.Sc., Ph.D.

Research/Academic Interests
My current research concentrates on the study of signal transduction pathways involved in prostate cancer development and progression. This includes studies on the EGFR family of receptor tyrosine kinases, leading to the PI3K/Akt pathway and finally to the mTOR signaling pathway. In particular, I investigate the interaction of these pathways with the androgen receptor. My research involves identification of significant therapeutic targets, as well as studying the effects of inhibitors of those targets both in vitro as well as in animal models. I am currently funded to study drug combinations that target parallel signaling pathways and in combination, appear to be highly effective in inhibiting the progression of prostate cancer.

Review.

James E. Goodnight, Jr., M.D., Ph.D.

Clinical Interests
Dr. Goodnight is responsible for designing the structure, rules, responsibilities, funding needs and physician medical practice goals for UC Davis.
A member of the UC Davis faculty since 1980, Dr. Goodnight is recognized as a skilled leader and a compassionate, dedicated clinician. Before attaining his current position, he served as the first director of UC Davis Cancer Center and for 12 years as chair of the Department of Surgery. As a physician, Dr. Goodnight specializes in treating malignant melanoma, breast cancer, pelvic tumors and bone and soft-tissue cancers. He is nationally recognized for the use and refinement of limb-sparing procedures for treating sarcoma.

Research/Academic Interests
Dr. Goodnight's research interests focus on early cancer detection, advancing minimally invasive surgical procedures, improving cancer patient survival, individualizing patient care and reducing disparities in cancer treatment.

Jeffrey P. Gregg's research laboratory has been dedicated to understanding the genetic basis of cancer using two fundamental biological processes, the genetic predisposition for cancer and molecular alterations (changes in DNA, gene expression and protein) that occur in individual tumors.

In searching for common genetic modifiers of cancer at the DNA level, Gregg has examined links between polymorphisms in the methylenetetrahydrofolate reductase gene and prostate cancer. He used innovative technology and informatics to study complex somatic changes in tumor formation, understand the underlying biology of cancer, and define better predictors for prognosis and responsiveness to clinical adjuvant modalities.

Dr. Gregg, an expert in microarray technology, has also moved into the neurosciences and research on autism. He has taken a unique approach to studying autism that uses microarray technology to perform gene expression studies of the entire genome of peripheral lymphocytes in order to identify genes associated with autism.

In addition to these microarray studies, he is adapting microarray technology to identify gains and losses (i.e., duplications and deletions) in the genome of children with autism.

Salvador G. Guevara welcome LGBT patients.

**Philosophy of Care**
Dr. Guevara is committed to the patient first and makes an effort to treat every patient as if they were a member of his own family. He also strongly believes in the idea that a patient-physician relationship is a partnership. Through this partnership, Dr. Guevara prioritizes translating medical issues such that patients feel empowered to make the right decision for themselves.

**Clinical Interests**
Dr. Guevara specializes in treating diseases of the colon, rectum and anus. He has strong clinical interests in minimally invasive surgeries (laparoscopic and robotic surgery as well as transanal endoscopic microsurgery) as well as functional and pelvic floor disorders.

**Clinical Interests**

Dr. Hagge has clinical interests in general diagnostic and emergency radiology, diagnostic and therapeutic nuclear medicine, positron emission tomography (PET), radio guided surgery, translational medical imaging, nuclear oncology and nuclear cardiology. Her research focuses on digital medical imaging and performance evaluation of diagnostic systems. She is the Instructor of Record for the Senior Medical Student Clinical Clerkship in Diagnostic Radiology.

Paul T. Henderson welcomes LGBT patients.

**Clinical Interests**

Mechanisms of cellular response to oxidative stress, drug and carcinogen metabolism, pharmacokinetics assay development, mass spectrometry, HPLC. Dr. Henderson is pursuing the development of advanced diagnostics with the goal of predicting patient response to cancer drugs prior to initiation of toxic chemotherapy. The diagnostics development is enabled by accelerator mass spectrometry (AMS), an ultrasensitive technology for detecting rare isotopes such as radiocarbon and tritium in biological samples. AMS is also useful for measuring pharmacokinetics of small drug doses in humans, which Dr. Henderson is applying to drug development and drug formulation studies. Another project involves the incorporation of hydrophobic drugs and membrane proteins into nanoparticles made of apolipoproteins and phospholipids called nanolipoprotein particles (NLPs). NLPs closely mimic the cellular membrane bilayer, and render hydrophobic molecules water soluble. Dr. Henderson is using NLPs for drug delivery and protein biochemistry studies that are related to breast cancer research.

For a comprehensive list of Dr. Henderson's publications, please click here (opens new window).
Dr. Hershey's laboratory is interested in the mechanism of initiation of protein synthesis in eukaryotes, how the process is regulated, and how it may contribute to cancer. His laboratory has focused on the structure/function of the mammalian initiation factors, has purified them and has cloned their cDNAs. They also are studying the structure of eIF3, the largest of the factors, which contains at least 13 non-identical subunits. eIF3 sub-complexes are generated by expressing recombinant proteins in baculovirus-infected insect cells and the functions of the individual subunits are characterized biochemically. In collaboration with Drs. Chris Fraser and James Evans (UC Davis), high resolution structures of eIF3 and its sub-complexes are being determined by X-ray crystallography and cryo-electron microscopy.

A second major effort concerns phosphorylation as a means to regulate initiation factor activities and protein synthesis. Having characterized the phosphorylation of eIF4B by RSK1 following serum stimulation, eIF3f by CDK11p46 upon entry into apoptosis (in collaboration with Dr. Jiaqi Shi, University of Arizona), and eIF3h by showing that phosphorylation is required for malignant properties when overexpressed, we are focusing on other eIF3 subunits that are phosphorylated. Phosphorylation sites have been identified by mass spectrometry (in collaboration with Julie Leary, UC Davis) and are being mutated to Ala and Glu to study the effects on eIF3 activity.

A third project concerns the role of translation in cell malignancy. Recent studies involving the overexpression of each of 12 eIF3 subunits in NIH3T3 cells identified five subunits that cause the malignant transformation of this immortal cell line. The mechanism of malignant transformation by eIF3 subunit overexpression and the effects of RNAi knockdown are being pursued.

A fourth project, in collaboration with Prof. Paul Hagerman (UC Davis), involves elucidation of how the fragile-X protein, FMRP, is translated from its mRNA. The occurrence of CGG-repeat elements in the 5'-UTR of the mRNA is expected to inhibit initiation, yet FMRP protein is detected in patients with CGG-repeat expansions. We are studying the mechanism of initiation on this mRNA and how the expected deleterious effects of the CGG-repeat elements are bypassed.

Lydia Pleotis Howell welcomes LGBT patients.

Clinical Interests
Lydia Howell is an anatomic and clinical pathologist well known for her work to improve methods and protocols for prevention, diagnosis and treatment of breast and cervical cancer. She provides clinical service in cytopathology, fine-needle aspiration biopsy and surgical pathology.

As the Director of UC Davis Health’s clinical laboratories, she oversees nearly 40 faculty members and more than 400 clinical and academic staff who provide comprehensive laboratory testing for UC Davis Medical Center and other hospitals and clinics through Northern California.

Research/Academic Interests
A leader in her field, Howell is a past president of the American Society of Cytopathology (ASC), former chair of the ASC’s Foundation, and the 2017 recipient of Papanicolaou Award, the ASC’s highest honor. She has pioneered methods for cervical cancer screening, including liquid-based preparations and computer-assisted methods. An advocate for high quality screening, early detection and diagnosis, she has provided leadership in standardizing practices that improve quality, outcomes, and access for the under-served through her participation in state workgroups, national consensus conferences and panels, and chairs the Pathology and Hematology Device Subcommittee for the US Food and Drug Administration.

Howell is also known for her commitment to faculty development and served as co-principal investigator for a $1.27 M NIH grant studying the effect of family-friendly policies on women’s careers in medicine, as well as the project leader for an Innovation Award for faculty career flexibility from the American Council on Education and the Sloan Foundation. She co-founded UC Davis Health’s award-winning Women in Medicine and Health Science program, and co-led it for 15 years. She chairs the Leadership Development and Diversity Committee of the Association of Pathology Chairs (APC) and co-founded and co-directs the APC’s Pathology Leadership Academy.

As chair of the Department of Pathology and Laboratory Medicine, she oversees faculty and academic staff who conduct leading-edge basic and translational research, and advance education and training at all levels within the field.

Chetan Shawn Irwin, M.D.

Chetan Shawn Irwin welcomes LGBT patients.

**Philosophy of Care**

It is my goal to share my in-depth knowledge of the hand and upper extremity with you so that you can understand what is causing your symptoms and together we can make a plan that fits your needs.

I aim to provide each patient with the same, highest quality, care I would seek for my wife or mother. When necessary, I consult with my colleagues - experts around the country - to ensure the treatment we choose is the best possible option for you.

**Clinical Interests**

As a fellowship-trained hand, upper extremity and microvascular surgeon, Dr. Irwin specializes in complex reconstruction after trauma, microsurgery, congenital hand surgery as well as fractures and disorders of the arm and wrist.

In addition, he performs surgical reconstruction for defects of the head, neck, breast, trunk, arms and legs. Other areas of expertise include reconstruction after skin cancer removal, and general plastic and reconstructive surgery.

**Research/Academic Interests**

Dr. Irwin's research interests include:

- Flexor tendon repair with novel coupling devices
- Accessibility to and outcomes of hand trauma care
- Joint orthopedic and plastic surgery academic hand program development
- Mobile device-enabled perioperative care and communication
- Surgical resident education

Paul Richard Kaesberg welcomes LGBT patients.

**Philosophy of Care**
Dr. Kaesberg is an adult medical hematologist who specializes in medical treatment of geriatric oncology as well as benign and malignant hematology. He is a strong advocate for providing patients with comprehensive care such as mutational profiling, regional therapies, clinical trials and supportive care.

**Clinical Interests**
Dr. Kaesberg is an adult hematologist who specializes in geriatric oncology as well as benign and malignant hematology.

**Research/Academic Interests**
Dr. Kaesberg is interested in conducting clinical trials for heme malignancies and has a particular interest in novel treatments for geriatric oncology as well as benign and malignant hematology including molecular targeted therapies, immunotherapies and therapies to overcome resistance.

Karen Kelly, M.D.

Karen Kelly welcomes LGBT patients.

**Clinical Interests**
Dr. Kelly is an internationally recognized lung cancer expert dedicated to providing enhanced cancer care through cutting-edge clinical trials. Dr. Kelly’s lung cancer research spans the spectrum of the disease from prevention to treatment. She has been at the forefront of clinical trials development evaluating drugs to treat lung cancer and novel compounds to prevent lung cancer. She is also involved in developing biomarkers for screening and early detection of lung cancer. Dr. Kelly has authored or co-authored more than 190 publications, including original papers, reviews and book chapters. She frequently lectures on lung cancer topics, nationally and internationally. Dr. Kelly is a long-standing active member of ASCO, SWOG and the IASLC.

Clinical Interests
Clinical:
Providing highly specialized consultations in the diagnosis and treatment of complex unexplained neurological abnormalities affecting visual pathways. The typical case is a patient who experiences unexplained vision loss. Routine diagnostic tests and a thorough evaluation by an ophthalmologist and/or neurologist and other appropriate sub specialists. Less complicated cases can often be resolved with a telephone consultation.
Facilitating the service's hallmark diagnostic capabilities is a full complement of the most sophisticated diagnostic tools and technology, including computerized visual field testing, the latest in 3-D digital imaging and electrophysiological testing, including VEP, ERG MFVEP and MFERG. The department's neuro-ophthalmology service accepts referrals statewide, nationally and internationally from ophthalmologists, neurologists, neurosurgeons and other physician specialists.

Research:
Dr. Keltner is the Co-Director of the OCT Reading Center with Dr. Jack Werner. They are currently involved in two major MS trials using OCT. Dr. Keltner was the Director of the Visual Field Reading Center for both the Longitudinal Optic Neuritis Study and Ocular Hypertension Treatment Study. He is an internationally known neuroophthalmologist who treats a wide variety of conditions. His areas of research interest include the use of botulinum toxin for the treatment of facial spasms, effects of cancer on the eye, autoimmune-related retinopathies, optic neuropathies that affect vision, MS and its affect on vision, and automated visual field testing.

Vanessa A. Kennedy welcomes LGBT patients.

**Clinical Interests**

Vanessa A. Kennedy provides specialized surgical care and chemotherapy services to women with gynecologic malignancies and complicated benign gynecologic conditions. She performs procedures through a variety of approaches, minimally invasive surgery using laparoscopic and robotic techniques.

Dr. Kennedy believes strongly in treating the patient as a whole and incorporating patients and their loved ones into the decision making process. She is passionate about maximizing quality of life for her patients and supporting them in their transitions between the various phases of treatment, from diagnosis to surgery and active treatment and into survivorship and whatever lies ahead.

In addition to providing surgery, chemotherapy and surveillance for cancer patients, Dr. Kennedy also has a special interest in sexual health concerns in women and girls with cancer, and is working to develop a specialized clinic to address these concerns.

**Research/Academic Interests**

Dr. Kennedy's research interests include assessing patient and provider understanding of the potential sexual implications of cancer diagnosis and treatment, improving education and resources for those caring for women with cancer, and providing sexual health counseling and support for female cancer patients.

Edward Kim welcomes LGBT patients.

**Clinical Interests**
Dr. Kim is an adult medical oncologist who specializes in medical treatment of gastrointestinal malignancies including pancreatic, hepatocellular, biliary, esophageal, gastric, and colorectal cancers.
He has expertise in conducting clinical trials for these malignancies and has a particular interest in novel treatments for pancreatic cancer.
For Gastrointestinal Oncology Clinical Trials at UC Davis Comprehensive Cancer Center, click here.

**Research/Academic Interests**
Dr. Kim's research includes developing and conducting clinical trials for gastrointestinal malignancies. He has a particular interest in translational and clinical research for pancreatic cancer.
His laboratory research is focused in 2 primary areas: 1) investigation and development of novel rational combinations of drugs for pancreatic cancer, and 2) development of patient-derived models of pancreatic cancer (including patient-derived xenografts and patient-derived organoids) to enhance pre-clinical evaluation of promising new therapeutics for pancreatic cancer.

Amanda Robinson Kirane welcomes LGBT patients.

**Philosophy of Care**

Dr. Kirane aims to provide compassionate care as a partnership with her patients and their families with respect to each patient's individual needs. In complex cases, a multi-disciplinary team of specialists within the cancer center will collaboratively coordinate in effort to help guide our patients in decision making to ensure the highest quality care.

**Clinical Interests**

Dr. Kirane is a fellowship trained Complex General Surgical Oncologist with specialty training in Melanoma, other skin cancers, and soft tissue diseases as well as minimally invasive approaches to oncologic surgery in soft tissue, gastric, and hepatobiliary cancers. Her clinical interests include regional therapies for locally advanced soft tissue cancers, including isolated limb infusion, as well as evolving technologies and therapies in advanced melanoma cases. She passionately believes in personalized medicine using evidence-based best practice to tailor treatment to each individual patient.

**Research/Academic Interests**

Dr. Kirane's academic interests include basic and translational science research in melanoma and sarcoma with specific interest in mechanisms of evasive resistance, tumor microenvironment signaling and immune response. Being able to move from bench to bedside and return allows for the rapid adaptation of surgical science to improved patient care. Her previous bench work has resulted in multiple ongoing trials of novel therapeutic strategies in pancreatic cancer. She is also invested in surgical education and clinical trials for novel targets in resistant melanoma.

Paul Knoepfler is an award-winning scientist who is particularly interested in what controls stem and cancer cell biological behavior. Known also for his popular blog – ipscell.com – and passionate stem cell advocacy, Knoepfler and his laboratory team focus on how a cell’s pluripotency control machinery goes awry during cancer. Knoepfler is using leading-edge genomics technology to better understand why stem cells behave the way they do, and working to determine how cell behavior can be directed toward safe and effective clinical use. Knoepfler also is an associate investigator at the Institute for Pediatric Regenerative Medicine at Shriners Hospital for Children Northern California. Along with studying the molecular programming of embryonic and neural stem cells, Knoepfler has investigated pediatric nervous system tumors and glioblastomas.

Richard Louis Kravitz welcomes LGBT patients.

Richard Kravitz is Professor and Co-vice Chair for Research, Department of Internal Medicine, University of California, Davis. As a clinician, he believes that careful history taking, judicious use of diagnostic studies, and clear communication are the fundamentals of good medical care. His primary research interests include patients as agents for quality, the causes and consequences of physician behavior, and improving care for mental health conditions in primary care settings. Over the past 25 years, Dr. Kravitz has examined patients' expectations for care, how physicians respond to patients' requests for services, and how direct-to-consumer advertising of prescription drugs influences physician decision making in depression. He recently completed a project evaluating targeted and tailored messaging to enhance care seeking for depression in general medical practices, and he is currently researching a phone app that helps patients with chronic pain design their own personalized clinical trials.

The winner of the 2013 George Engel Award for Outstanding Research Contributing to the Theory, Practice and Teaching of Effective Health Care Communication and Related Skills, Dr. Kravitz currently serves as Co-Editor-in-Chief of the Journal of General Internal Medicine. A Fellow of the American College of Physicians and Academy Health, he is a graduate of Stanford University and UC San Francisco School of Medicine. He completed additional clinical and research training at UCLA, where he served on faculty until his 1993 arrival at UC Davis.

Hsing-Jien Kung, Ph.D.

Clinical Interests
Hsing-Jien Kung is recognized for his significant contributions to understanding the role of oncogenes and growth factors in cancer. Dr. Kung's lab is engaged in cancer research with specific focus on the identification of genetic and epigenetic factors contributing to the development of human malignancies including prostate cancer and Kaposi's sarcoma. Under investigations are cellular and viral oncogenes, which are involved in posttranslational modifications of signal molecules and chromatin, leading to malignant transformation. They include tyrosine kinases, E3 SUMO ligases and histone demethylases. In collaborative work, the lab is also involved in developing inhibitors or therapeutic agents which target these oncogenes, resulting in specific and enhanced killing of tumor cells. More recent work has been directed toward the understanding of autophagy (self-eating) as a modulator of apoptosis (self-killing). Efforts are being made to develop effective means to measure autophag and to modulate this process.

Kit S. Lam welcomes LGBT patients.

Dr. Lam is an expert in combinatorial chemistry, chemical biology, drug development, molecular imaging, nanotherapeutics and medical oncology. His laboratory is engaged in the development and application of combinatorial library methods for basic research and drug discovery. In addition to cancer drug development, he is also interested in signal transduction, antibiotics development, molecular immunology, chemical microarray, and proteomics.

Dr. Lam is both a practicing medical oncologist and a laboratory investigator. He is acclaimed for his pioneering role in the field of combinatorial chemistry and developing the novel one-bead-one-compound technology, which rapidly screens millions of chemicals at one time to identify those that bind to diseased cells. The tool is advancing the early detection and precise delivery of treatments for brain, breast, prostate, pancreatic, lymphoma and other cancers. In addition, it is advancing the discovery of imaging agents that produce highly detailed molecular profiles of diseases for improved diagnosis and tracking medication effectiveness.

His development and applications of combinatorial chemistry and other chemical methods look to solve many biomedical problems. Dr. Lam invented the "one-bead-one-compound" (OBOC) combinatorial library method, filed the patents and published the technique in Nature in 1991. This represents one of the first few reports in the new field of combinatorial chemistry at the time.

Since then, the field of combinatorial chemistry has rapidly evolved into a new chemistry discipline, and has become an indispensable tool in drug development and chemical research. The OBOC combinatorial library approach is unique and truly an ultra-high throughput method, as thousands to millions of chemical compounds (peptides, peptidomimetics, small molecules, and macrocyclic natural product like molecules) can be efficiently synthesized and screened in parallel in a relatively short time.

In addition to expanding the use of one-bead-one-compound technology, Dr. Lam's research also includes developing a blood test for ovarian-cancer detection, utilizing nanoparticle carriers for drug delivery and synthesizing cancer-fighting molecules with less-toxic side effects. He is currently collaborating on projects to identify the molecular pathogenesis of and treatments for primary biliary cirrhosis, osteoporosis and Alzheimer's disease.

Primo Nery Lara, Jr. welcomes LGBT patients.

Clinical Interests
Dr. Lara is a clinician-scientist whose principal research interests are in the field of developmental therapeutics, particularly in genitourinary and thoracic malignancies, as well as in cancer biomarker development. He has a national and international reputation in clinical-translational research, and has chaired or co-chaired many cancer clinical trials from phase I to III. He directs an active clinical practice in genitourinary and thoracic malignancies and is a strong advocate for cancer clinical trials.

Research/Academic Interests
Dr. Lara has received research funding from the National Institutes for Health/National Cancer Institute (including R01 and R21 awards) and the American Cancer Society, among others. He has authored or co-authored nearly 200 peer-reviewed manuscripts, most notably on novel or emerging anti-neoplastic strategies. He is currently principal investigator of the NCI-funded K12 Paul Calabresi Clinical Oncology Training Grant, the NCI-funded N01 Early Therapeutics Award, and the UC Davis ACS Institutional Research Grant. He also serves as an active co-investigator in several NCI-funded drug development awards at UC Davis.

Dr. Lara is active in medical education and training, having served as chair of the American Society of Clinical Oncology's Continuing Medical Education Subcommittee in 2012-2013 and Education Committee chair of the International Association for the Study of Lung Cancer from 2011-2013. He has chaired SWOG's Advanced Kidney Cancer Organ Site since 2002, and serves as chair of SWOG's Professional Review Committee.

Gary Scott Leiserowitz welcomes LGBT patients.

**Clinical Interests**
Gary S. Leiserowitz and his colleagues in the Division of Gynecologic Oncology believe in patient-centered care that is anchored in the most current evidence-based medicine. He works closely with other physicians in medical oncology, radiation oncology and pathology to bring a multidisciplinary focus to each patient’s case. His extensive surgical experience includes minimally invasive and robotic-assisted procedures for a variety of conditions. As director of the gynecologic oncology fellowship program at UC Davis, Leiserowitz is also helping train the next generation of specialists in cancers of the female reproductive system.

Joseph W. Leung, M.D.

**Philosophy of Care**
To provide the best care for my patient through clinical service, education and development of new (and improved) treatment.

**Clinical Interests**
Dr. Joseph Leung specializes in all types of gastroenterological conditions. He is one of the leading biliary endoscopists in the United States and well-recognized in Asia for his work on biliary stents and stones.

He pioneered several therapeutic endoscopy techniques including injection hemostasis, urgent nasobiliary drainage and stenting for patients with acute cholangitis.

His research interests focus on design of biliary stents, bacterial biofilm and biliary infection and methods to prevent of biliary sludge and stones formation.

His other clinical and research interests are in colorectal cancer screening using the novel water method. He is interested in teaching endoscopy especially in the use of simulation practice to improve trainees’ clinical ERCP skills.

**Research/Academic Interests**
Patients with pancreaticobiliary diseases

Teaching novice endoscopists the basic technique of ERCP and biliary intervention.

Top Basic Science Abstract, 2007
Jian-Jian Li, M.D., Ph.D.

Clinical Interests
Research interests include the study of the molecular mechanisms causing tumor resistance to radiation and chemotherapy. A tumor resistant signaling network regulated by the transcription factor NFκB and a group of proteins that translocate to the mitochondrion are being investigated in an array of human cancers including breast, lung, prostate and liver. Additional projects are related to radiation-induced adaptive response in normal tissues and in the radiation-resistant cancer stem cells. The goal of these studies is to find therapeutic targets to enhance cancer cure rates by radiotherapy.

Tianhong Li, M.D., Ph.D.

Tianhong Li welcomes LGBT patients.

Clinical Interests

Dr. Li has been involved in several translational research projects since her fellowship training, leading to the publication of several original research papers. Areas of her current studies are in optimizing anti-epidermal growth receptor (EGFR) therapy in non-small cell lung cancer and combining charge farnesyl transferase inhibitor tipifarnib with cytotoxic and hormonal agents in breast cancer. She has served as principle investigator of several investigator-initiated studies in breast cancer and lung cancer.

As a physician-scientist, her main research focus is on understanding the mechanisms of action of novel targeted agents and developing rational therapeutic strategies for breast and lung cancer.

Karen K. Lindfors welcomes LGBT patients.

**Philosophy of Care**
As the section chief of Breast Imaging, I believe that breast cancer screening, detection and diagnosis must be offered in a professional, yet warm and supportive environment that reduces anxiety for the women we serve.

The staff, technologists and physicians work as a team to achieve this goal. I believe strongly in patient/radiologist direct communication and I encourage discussion with patients when they are seen for possible signs or symptoms of breast cancer.

**Clinical Interests**
A leading advocate for women's health, Dr. Lindfors works locally and nationally to promote patient and health-care professional education and early detection of breast cancer. Dr. Lindfors is researching the development of new methods to screen for breast cancer, including dedicated breast CT and breast tomosynthesis.

Dennis L. Matthews, Ph.D.

Clinical Interests

Dennis Matthews is an expert in developing optically based biosensors and medical devices. Dr. Matthews is Principal Investigator and Director of the UC Davis National Science Foundation's Center for Biophotonics Science and Technology. He is also the Associate Director and Biomedical Technology Program Leader for the UC Davis Cancer Center that received NCI designation in 2002. In addition, Dr. Matthews is responsible for the development of industrial and medical applications of Lawrence Livermore National Lab (LLNL) technology, especially for the prevention, screening, diagnosis and treatment of diseases such as diabetes, stroke, brain trauma, chronic pain and cardiovascular disease.

Dr. Matthews leads a multi-directorate center within Livermore whose mission is to develop medical devices in collaboration with industry. Current projects and those already successfully transferred to industry include: an opto-acoustic recanalization device for treating ischemic stroke; a miniature x-ray source which is mounted on a microcatheter and used to treat coronary artery restenosis; micropower impulse radar for numerous medical diagnostics, including: differentiating hemorrhagic vs. ischemic stroke; an implantable, continuous-glucose monitor; and ultra-short-pulse laser microsurgery devices.

Dr. Matthews is widely acknowledged to have invented and developed the x-ray wavelength lasers. Among many other applications of that technology, he continues to collaborate with biologists in order to use x-ray lasers to generate x-ray images of living subcellular material, and with materials scientists to develop new methods of studying materials properties and defects. Finally, Dr. Matthews is extremely active in commercializing technologies developed at the national laboratories. He specializes in helping investors or small companies obtain the technologies needed to capture profitable new markets. He has already helped investors put together several start-up companies based on Livermore and other national lab technologies. He has broad scientific management and marketing skills, having managed programs as large as $30M/year while at Livermore and having successfully garnered project funding from both government and private sources.

Emanual Maverakis, M.D.

Clinical Interests
Dr. Maverakis' research team is focused on understanding how alterations in glycosylation contribute to the pathophysiology of autoimmunity. The specific diseases his group has been studying include: pyoderma gangrenosum, psoriasis, scleroderma, pemphigus vulgaris, and bullous pemphigoid.

Jyoti Mayadev welcomes LGBT patients.

Philosophy of Care

Dr. Mayadev believes in providing each patient with the most comprehensive cancer care in a supportive and compassionate environment. Her multidisciplinary approach to treatment focuses on the patient in a team oriented setting.

Clinical Interests

Dr. Mayadev has a clinical focus on the treatment of breast and gynecologic malignancies. She is a national principal investigator through the NRG oncology group for cervical cancer, and is the co-chair of the Phase I committee for gynecologic radiation therapy. She specializes in various radiotherapy techniques including intensity modulated radiation therapy (IMRT), image guided radiation therapy (IGRT), and high dose rate brachytherapy.

Dr. Mayadev is specifically interested in using technical advances to improve the clinical delivery and side effect profile of radiation therapy, and in particular brachytherapy. She has extensive clinical experience in brachytherapy procedures, and explores the use of intraoperative image guidance from a clinical and research standpoint.

Research/Academic Interests

Dr. Maydev's research interests focus on the investigation of novel therapeutics and immunotherapy to improve the outcomes of cervical cancer. In addition, she explores various methods of delivery of radiation treatments.

Dr. Mayadev's research passion is in studying the technical delivery of high dose rate brachytherapy to an effort to spare normal tissue toxicity, particularly for gynecological cancers.

John P. McGahan welcomes LGBT patients.

**Philosophy of Care**
Dr. McGahan’s philosophy is to consider the best treatment options for his patients to insure their best outcome for their disease or cancer. He has developed and is an innovator in a variety of newer and less invasive precision therapies for focal cancer.

**Clinical Interests**
Dr. McGahan is a leading interventional and diagnostic radiologist. He has pioneered the use of several innovative techniques, including the use of radiofrequency ablation to treat primary and metastatic tumors (with results comparable to traditional surgery, but with fewer risks). He also has used ablation techniques in the treatment of primary and metastatic liver and renal tumors. He has treated benign and metastatic bone tumors as well. In addition, Dr. McGahan has investigated new techniques of tissue ablation for other organs, such as the prostate and breast. He has pioneered several other interventional techniques, including the development of percutaneous cholecystostomy as well as new techniques for endoluminal drainage of pelvic abscesses. He has recently studied the efficacy of abdominal ultrasound contrast in patients who have different diseases, including the use of ultrasound contrast in patients with hepatic or splenic injuries from blunt abdominal trauma.

Dr. McGahan was appointed as the chairperson by the American College of Radiology for its national Accreditation Program of Ultrasound Practices in the United States and Canada. He serves on the editorial board of several scientific journals and has edited six textbooks, including Diagnostic Ultrasound, A Logical Approach; Diagnostic Imaging of Fetal Anomalies; and most recently, an Atlas of Ultrasound Measurements.

**Research/Academic Interests**
Dr. McGahan’s research is devoted to new minimally invasive methods of improving patient care. Among his research has been the development of percutaneous techniques in minimal treatment of cancer using energies such as radiofrequency. He has also developed techniques for percutaneous insertion of catheters into the gallbladder for acute cholecystitis. He has patented a device for ultrasound guidance of treatment of pelvic abscesses.

Joy Melnikow, M.D., M.P.H.

Joy Melnikow welcomes LGBT patients.

**Philosophy of Care**

Dr. Melnikow became a family practitioner because she likes caring for the whole patient in the context of his or her family and community. She is particularly interested in women's health care, especially preventive health maintenance. She enjoys caring for patients of all ages, especially children. She is pleased that the Family and Community Medicine clinic enables her to serve many in the community who are in need of health care, including maternal-child health care and preventive health services.

**Clinical Interests**

Dr. Melnikow is particularly interested in women's health care, including prenatal care, breastfeeding and preventive health maintenance. Her research areas include preventive services, prenatal care, patient compliance and physician behavior. She also studies underserved populations and ways to improve cost effectiveness in women's health care.

Frederick J. Meyers welcomes LGBT patients.

A member of the UC Davis faculty since 1982, Dr. Meyers has distinguished himself as a national expert in hematology and oncology, with a special emphasis on cancer molecular biology, metastatic cancer, end-of-life care and pain management. He served as chair of the Department of Internal Medicine for 12 years, senior associate dean for academic affairs and medical director of home health services.

Under Dr. Meyers' visionary leadership, the Department of Internal Medicine flourished as a productive and dynamic center of academic medicine. With a focus on translating basic science research into clinical therapies and advancing the practice of evidence-based medicine, the department's academic and clinical programs have made high-impact innovations to advance health.

Dr. Meyers is a longtime leader of the hospice movement in the United States, establishing programs that are now national models for providing compassionate, end-of-life care. He is well-known for his work in "simultaneous care," a model of care that allows cancer patients with advanced disease to receive both investigational treatments and palliative care.

Dr. Meyers is also the executive director of Medical Education and Academic Planning for the University of California, Merced. He is leading the effort to begin a UC Merced medical school that would train new physicians in the San Joaquin Valley to provide care in the medically underserved communities.

© 2018 UC Regents
Cancer is not a disease that occurs in a vacuum and thus I focus not only on treating the cancer but also on assisting patients with the nutritional, social, emotional, and spiritual issues which are often ignored in modern medicine. I believe strongly in a multidisciplinary team approach to cancer including open lines of communication with both my patients and fellow physicians. Although I employ aggressive cutting edge anti-cancer treatments I am also respectful of and willing to incorporate holistic and alternative medicines into patient care. Ultimately I strive to treat each patient with the same respect and diligence I would an ailing member of my own family.

Dr. Monjazeb is a clinician scientist and he is involved with cutting edge clinical and basic science research projects. He is a nationally recognized expert in cancer immunotherapy. His research is focused on understanding how the immune system can be harnessed to fight cancer and how radiotherapy can be used to promote anti-tumor immune responses.

Dr. Monjazeb has a clinical focus on the treatment of gastrointestinal malignancies (including esophageal cancer), sarcoma, melanoma and breast cancers. He specializes in various radiotherapy techniques including intensity modulated radiation therapy (IMRT), image guided radiation therapy (IGRT), stereotactic body radiotherapy (SAR / SBRT) and high dose rate brachytherapy.

Dr. Monjazeb is a principal investigator on a number of clinical trials testing novel cancer immunotherapy approaches and sees patients with Stage IV cancer for consideration of these trials.

Christopher J. Murphy, D.V.M., Ph.D.

Dr. Murphy's laboratory is interdisciplinary with strong collaborative ties to the schools of Medicine, Veterinary Medicine and Engineering. He has four areas of research ongoing in his laboratories: 1) The modulation of cell behaviors and corneal wound healing by trophic factors, 2) The modulation of cell behaviors by topographic features of the substratum, 3) Comparative ocular functional morphology, 4) The development of improved solutions for organ storage prior to transplantation. The majority of his time spent on investigating how biophysical cues provided through the extracellular matrix modulate fundamental behaviors in diverse cell types.

Danh Nguyen, M.S., Ph.D.

Clinical Interests
Dr. Nguyen's research interests encompass several areas of basic and clinical and translational science. These include studies to understand outcome risk trajectories over time in patients on dialysis, such as cardiovascular events and infection-related hospitalization. He also collaborates on many studies to further elucidate the molecular and clinical features of fragile X premutation carriers and also in treatment studies for individuals with Fragile X Syndrome and fragile X premutation over the past decade. Motivated by these and other biomedical studies, Dr. Nguyen develops novel statistical methodologies in statistical bioinformatics (prediction, classification, false discovery rate, microarray data, dimensional reduction, partial least squares dimension reduction); case series method and measurement error; sparse longitudinal analysis (mixed effects model, varying-coefficient model) among others.

Jan A. Nolta welcomes LGBT patients.

Jan A. Nolta, Ph.D., is the director of the Stem Cell Program at UC Davis School of Medicine and directs the university’s Institute for Regenerative Cures. She also serves as scientific director of the large UC Davis Good Manufacturing Practice facility and the California Umbilical Cord Blood Collection Program. In 2013, she was named one of the “Top 50 Global Stem Cell Influencers.” The UC Davis Stem Cell Program has more than 150 faculty members collaborating to work toward regenerative medicine-related cures for a spectrum of diseases and injuries. The current research in Nolta’s laboratory is focused on developing therapies that will use gene-modified bone marrow-derived mesenchymal stem/stromal cells to deliver factors for treating Huntington’s disease and vascular disorders. The group she oversees at UC Davis’ Shared Translational Laboratory is helping university teams develop numerous clinical trials for gene and cell therapy, with several adult stem cell therapies already in the clinic and more than a dozen in the pipeline.

A scientist with more than 25 years of experience with human stem cells and clinical trial development, Nolta has published more than 100 peer-reviewed manuscripts in the stem cell field and has authored 30 book chapters. She has served on more than 200 review panels for the National Institutes of Health and other grant-funding agencies, is editor for the journal Stem Cells, and was editor of the book Genetic Engineering of Mesenchymal Stem Cells.

In 2012, Dr. Nolta received a prestigious five-year Transformative Grant Award from the NIH, and is also funded as co-principal investigator on three grants from the California Institute for Regenerative Medicine to develop novel phase I clinical trials.

Arun Ranjan Panigrahi welcomes LGBT patients.

**Philosophy of Care**

I believe that as physicians who care for children with chronic conditions as well as life-threatening illnesses such as cancer, we bear a distinct responsibility to provide evidence-based medicine with care, honesty and compassion.

I work every day with patients and families to discuss various diseases and their management, and work to partner with families during this difficult process to obtain the best possible outcomes.

**Clinical Interests**

Dr. Arun Panigrahi is a pediatric hematology-oncology physician offering care for children with various hematological conditions as well as malignant diseases. He has special clinical interest and expertise in bleeding and clotting disorders, hemoglobinopathies, anemias, leukemia and lymphoma.

**Research/Academic Interests**

Dr. Panigrahi's research focuses on various bleeding disorders, such as immune thrombocytopenic purpura (ITP), hemophilia, von Willberand disease and others. He has also published research focusing on the care of children with sickle cell disease, and has even worked to create protocols for the treatment of sickle cell disease with allogeneic bone marrow transplantation.

Dr. Panigrahi is also very much interested in medical education, and has been a director of a fellowship program. Finally, Dr. Panigrahi is also involved in a variety of international collaborations to provide care for underserved children.

Dr. Parikh is an adult medical oncologist who specializes in medical treatment of genitourinary malignancies including kidney/renal cell, bladder, prostate, ureteral and testicular cancer/germ cell tumor cancers.

She is a strong advocate for providing patients with comprehensive care such as mutational profiling, regional therapies, clinical trials and supportive care.

Dr. Parikh is interested in conducting clinical trials for these malignancies and has a particular interest in novel treatments for prostate, renal, and bladder cancer including molecular targeted therapies, immunotherapies and therapies to overcome resistance.

Debora A. Paterniti, Ph.D.

Clinical Interests
Debora A. Paterniti earned her doctorate in sociology from UC Davis and completed a fellowship in health policy and health services at Yale School of Medicine. She is an expert in the application of qualitative research methodology to questions of health services. Her areas of specialization include medical and applied sociology and social psychology. She received a University Teaching Award from UC Davis in 2003. Dr. Paterniti currently teaches research design, medical sociology, and social welfare and health. Her research interests include studies of informed consent, physician-patient interaction and decision-making, and community-based research.

Anjali Pawar welcomes LGBT patients.

**Clinical Interests**
Clinical Interests: I am a trained pediatric hematologist oncologist and that means I am a doctor who specializes in taking care of children with cancer and other blood related disorders including various anemias or bleeding and clotting disorders. I am involved in diagnosis, treatment and long term follow-up of my patients.

Research Interests: Besides oncology and hematology, my area of interest is adolescents with bleeding disorders. I have worked with middle and high schools and am currently working on standardizing a simple pediatric questionnaire instrument that can assess the bleeding problems that require further work up. Another area of my interest is children with clotting problems. This issue is becoming more prevalent in the pediatric population with time. The use of invasive procedures and central lines is making a previously infrequent condition among children, thrombosis, to become more ubiquitous. Altered lifestyles that are more sedentary and obesity are causing problems like thrombosis in childhood that were relatively unknown before.

Philosophy of Care: Although the patient is one of the children in the family, the diagnosis and care of that child affects the whole family. It is very important for the child to have a warm and loving family. Healthy eating habits and lots of exercise go a long way in helping to beat cancer!

Julian R. Perks, Ph.D.

Dr. Perks is a physicist whose clinical interests include stereotactic radiotherapy as well as radiosurgery planning and treatment delivery. In particular, he has been focusing on the commissioning and clinical integration of a new gamma-knife system for the treatment of intra-cranial lesions. He also is working to expand the department's intensity-modulated radiotherapy (IMRT) capabilities. Dr. Perks's research activities include the comparison of linear accelerator and gamma knife-based radiosurgery procedures, optimizing imaging protocols, and the retrospective analysis of cone beam CR predictive outcome models to develop data for UC Davis. As a researcher, he does not see patients.

James Purdy, Ph.D.

Clinical Interests
Dr. Purdy's research is directed toward image-based 3-D treatment planning and conformal radiation therapy (3DCRT), including the development and implementation of intensity-modulated radiation therapy (IMRT) and image-guided radiation therapy (IGRT). He is also involved in the development of international standards for the dose and volume specifications used in prescribing, recording and reporting radiation therapy results. Dr. Purdy is particularly interested in radiation oncology informatics, including the development of systems that can be used to receive, share and analyze volumetric multi-modality imaging, treatment planning, and verification (ITPV) digital data, which can be linked with clinical outcome data. He is an active participant in the Advanced Technology Clinical Trials Quality Assurance Consortium (ATC) supported by the National Cancer Institute (NCI).

Shyam Rao, M.D., Ph.D.

Philosophy of Care
I strive to work with each individual patient to provide the highest-quality care while also advancing our current cancer treatments. I am committed to individualized patient care, state-of-the-art treatment strategies, teaching and research to provide the best possible patient care.

Clinical Interests
Dr. Rao specializes in the use of intensity-modulated radiation therapy (IMRT), image-guided radiation therapy (IGRT) and stereotactic body radiation therapy (SBRT). Using these advanced techniques, we can effectively treat tumors while reducing the chance of side effects. As cancers is often treated with a combination of therapies, Dr. Rao works closely with surgeons and medical oncologists to provide the optimal treatment for each patient.

Dr. Rao was previously a faculty member at Memorial Sloan-Kettering Cancer Center in New York.

Research/Academic Interests
Dr. Rao's research has focused on improving the effectiveness of radiation therapy and reducing treatment-related side effects.

Carol M. Richman welcomes LGBT patients.

Clinical Interests
Dr. Richman established the Bone Marrow Transplant Program at UC Davis. She is an expert in bone marrow and stem cell transplantation for treatment of lymphoma, leukemia and multiple myeloma. Dr. Richman is the medical director of the Clinical Hematopoietic Progenitor Cell Laboratory.

Title
Director, Stem Cell Transplant Program
Professor

Specialty
Cancer, Hematology/Oncology, Internal Medicine

Department
Internal Medicine

Division
Hematology and Oncology

Center/Program Affiliation
Stem Cell Research Program

Eve Therese Rodler, M.D.

**Philosophy of Care**
Dr. Rolder admires the courage and fortitude that her cancer patients show on a daily basis and tries to help them through this difficult period. She researches all available treatment options and advise each patient as she would a family member. Her goal is to provide my patients with clear information in understandable language, and then to partner with them to decide which is the best treatment for them. She is a strong advocate for her patients and promise to support them during each stage of their cancer care.

**Clinical Interests**
Dr. Rodler is a clinician investigator in both breast cancer and sarcoma.

**Research/Academic Interests**
Dr. Rodler’s research interests are in triple negative breast cancer treatment. She specializes in breast cancer clinical care and research. Her area of research interest in is hormone receptor negative, HER2/neu negative breast cancer ("Triple negative breast cancer").

She is the principal investigator for a phase I clinical trial in patients with metastatic triple negative breast cancer which is exploring the efficacy of using a chemotherapy drug combination that causes DNA damage, and a new drug called a “PARP inhibitor” which acts as a double hit to these tumor cells. Poly (ADP-ribose) polymerase (PARP) inhibitors inhibit DNA repair in cancer cells that have pre-existing DNA repair defects, but not normal cells.

Yi Rong, Ph.D.

**Clinical Interests**

Dr. Rong's clinical interests covers a full spectrum of treatment modalities, including external beam radiotherapy, HDR brachytherapy, imaging guided radiotherapy, respiratory gating, Gamma Knife, linac-based stereotactic radiosurgery (SRS), and stereotactic body radiotherapy (SBRT).

**Research/Academic Interests**

Dr. Rong's research interests include improvement of treatment protocols and quality assurance, design of clinical trials, study of various treatment modalities, Respiratory gated and imaged guided radiotherapy.

Her future research interests will continue to be clinical and physics oriented, with more focus on functional imaging and biological modeling. Recent emergent positron-emitting isotopes, such as Zr-89 or Cu-64 for Positron Emitting Tomography (PET) / CT scanning, have great potential in target identifying for radiation therapy treatments. Dynamic contrast-enhanced magnetic resonance imaging (DCE-MRI) provides high sensitivity and specificity for various cancer sites, and greatly helps in defining tumor size and stage. My future research will focus on investigating functional images and their applications in Radiotherapy, as well as radiobiological aspects of SBRT treatments.

Rachel Ruskin, M.D.

Rachel Ruskin welcomes LGBT patients.

**Philosophy of Care**

Dr. Ruskin believes that cancer happens not only to an individual, but also to her family and friends. As a result, she and her colleagues strive to support patients and their loved ones physically, emotionally, and spiritually as they face the stress of a gynecologic cancer diagnosis.

**Clinical Interests**

As a gynecologic oncologist, Dr. Rachel Ruskin provides specialized care for women with ovarian, uterine, cervical, vaginal, and vulvar cancer. She personalizes each patient’s treatment plan through a variety of surgical approaches, chemotherapy regimens, and targeted agents. Utilizing her training in palliative medicine, she seeks to optimize quality of life for her patients during and after their cancer treatment and to ensure that the plan of care is in line with each woman’s values and goals.

**Research/Academic Interests**

Dr. Ruskin’s research interests lie at the intersection of gynecologic oncology and palliative care. Specifically, her interests include improving symptom assessment and management as well as increasing shared decision-making between women with gynecologic malignancies and their physicians.

Noriko Satake welcomes LGBT patients.

**Clinical Interests**

Dr. Satake's research focuses on the development of targeted therapies for pediatric cancers, with a special emphasis on leukemia and neuroblastoma. She is currently developing targeted therapies using nanoparticles, chemotherapeutic drugs, and siRNA, with leukemia-specific ligands and antibodies.

She has developed a human leukemia xenograft mouse model and used this model to evaluate markers for leukemia stem cells. Through a collaboration she initiated with a local company, she has also developed a mouse model of a rare pediatric cancer, which will be used to study this cancer and evaluate new therapies.

Her other research focus is translation of bioengineering technologies into clinical applications. She has established strong collaborations with bioengineers at the UC Davis Center for Biophotonics Science and Technology, particularly in the application of Raman spectroscopy in the clinic. In a previous collaboration, she studied leukemia cells in cerebrospinal fluid using Raman spectroscopy as an objective measurement of central nervous system leukemia. More recently, they have begun to focus on red blood cells.

Candice A. M. Sauder, M.D., M.Ed.

**Philosophy of Care**
Dr. Sauder is passionate about helping women and men with breast cancer in all its' myriad forms. As a breast surgeon, she works as a partner with women and their families to provide excellent care in a compassionate and respectful environment. She believes that a focused multi-disciplinary approach, including surgical oncology, medical oncology, radiation oncology, genetics, and plastic surgery results in the best long term outcomes for her patients.

**Clinical Interests**
Dr. Sauder is a fellowship trained breast surgeon who specializes in all areas of breast surgical care. She provides comprehensive breast cancer care using the least invasive methods of treatment following oncoplastic principles, often times in conjunction with her plastic surgery colleagues.

**Research/Academic Interests**
Dr. Sauder's academic interests include: surgical education, application of teaching techniques to surgical trainees, triple negative breast cancer, and premenopausal breast cancer patients.

Genome engineering to improve public health.

Synopsis:
Almost every disease has a genetic component. Often this information is used only to determine how condemned a person is to develop disease. We would like to use the genetic information to fix the disease. A guiding principle for our work has been to study how nature does what it does, then attempt to use that knowledge to make useful tools to improve public health, either through increased knowledge or therapeutic intervention. Specific research foci in the Segal Lab revolve around engineering zinc finger, TALE, and CRISPR nucleases and transcription factors.

Designing permanent inactivators of HIV. We are designing CRISPR nucleases to chop up the integrated DNA form of the HIV provirus without affecting any human sequences. Unlike most other anti-HIV therapies, this approach would permanently inactivate the virus. It should also be useful in patients with viruses that use CXCR4, for whom CCR5 entry inhibitors would be ineffective (i.e.: most infected patients). We are also developing novel delivery methods.

Manipulating epigenetic mechanisms in Angelman, Prader-Willi, and Dup15q Syndromes. These are rare neurogenetic diseases that cause autism-spectrum symptoms, but their genetics has made them the textbook examples of imprinting disorders. We are using zinc finger-based artificial transcription factors to activate the epigenetically silenced genes in these diseases.

Manipulating genetic variation in Coronary Artery Disease (CAD). Several genetic variations (SNPs) have been recently associated with an increased risk of CAD. We are using CRISPR nucleases to engineer defined haplotypes into human induced pluripotent stem cells (hiPSC) in order to understand the functional role of these variants. Our approach overcomes the historic barrier of trying to study the effects of specific human mutations in a background of millions of other genetic differences between two individuals.

Using our genomes to improve public health. Directly, or through collaboration, our research interests span colorectal cancer, breast cancer, neurofibromatosis, Down syndrome, Rett Syndrome, and stem cell reprogramming. We are applying our technology to make improved preclinical animal models of disease, drawing on the strategic strengths of UC Davis in human medicine, veterinary medicine, animal science, and genome science.

High-throughput investigations of CRISPR-DNA interactions. We continue to develop new methodologies for genome editing, such as methods to study off-target activity of CRISPRs and factors for targeted epigenetic modification. We employ methods of directed evolution for protein engineering and ChIP-seq and RNA-seq to examine the effects of tools on a genome-wide scale.

Barbara L. Shacklett welcomes LGBT patients.

Our main topic of research is chronic HIV infection, with an emphasis on the body’s immune response to HIV in the gastrointestinal and reproductive tracts as well as the central nervous system.

We are also very interested in HIV prevention strategies, including vaccines and microbicides. Work in the laboratory is funded by grants from the National Institutes of Health (NIH).

Our major areas of study can be summarized as:

1) Cellular Immunology: T-cell biology, innate-like T-cell subsets
2) Mucosal Immunology: Adaptive immunity in the gastrointestinal and reproductive tracts
3) Infectious Diseases: HIV and other sexually transmitted diseases. Emerging viruses.

Barbara L. Shacklett welcomes LGBT patients.

Dr. Shelton specializes in nuclear medicine, PET-CT, and some aspects of diagnostic radiology. He is studying cardiothoracic radiology, nuclear medicine, computer networking systems in nuclear radiology, functional cardiac protocols, and tumor work-up and staging with functional imaging. Dr. Shelton helped pioneer the development of transesophageal echocardiography, and has presented nationally on osteoporosis, skeletal metastases in lung cancer patients, thyroid carcinoma, cardiovascular MRI, PET-CT, and SPECT. He has authored seventeen radiology textbook chapters and is a reviewer for several scientific journals including The Journal of Nuclear Medicine and the Journal of Thoracic Imaging.

I have had a sustained interest in the underlying molecular mechanisms governing life and how their disturbance can lead to disease. In particular, I would like to determine why aging is such a dominant risk factor. Currently, my research focuses on a prominent age related disease age-related macular degeneration. To determine the underlying defects associated with this disease I have chosen to explore the genomics and epigenetics of the affected eye tissue. In addition I am conducting a thorough search of the molecular targets of anti-inflammatory steroid therapy of the eye in an effort to improve such treatments.

Susan Stewart’s research interests and activities include statistical methods and issues in cancer, population-based research, quality of life, health disparities, behavioral interventions, study design and data quality.

Stewart has served as national biostatistical director and program evaluator for the Asian American Network for Cancer Awareness, Research and Training (AANCART), and chaired a group determining reporting measures across all 23 such Community Network Program Centers funded by the National Cancer Institute’s Center to Reduce Cancer Health Disparities.

Her select recent undertakings also include quality-of-life analyses in breast cancer patients and assessments of behavioral interventions for breast and colorectal cancers, hepatitis B and smoking cessation. Stewart is also addressing cross-cutting statistical issues in a multi-center longitudinal study, and investigating effects of geographical clustering on the variance of parameter estimates in community intervention trials.

Nicholas Stollenwerk welcomes LGBT patients.

Patients want high quality medical care, and they want it provided in an efficient and timely manner. They also want a health care provider that values communication; one that communicates with clarity and compassion. I share these beliefs. It is my goal to provide care that reflects these values.

**Philosophy of Care**

Dr. Stollenwerk’s clinical interests:

**Pulmonary Medicine:**

1. Interventional Pulmonology: advanced diagnostic bronchoscopy, airway interventions, and pleural disease management
2. Lung cancer: diagnosis, staging, and management
3. Cystic fibrosis

**Critical Care Medicine:**

1. Medical critical care
2. Multidisciplinary care for critically ill subspecialty patients
3. Bedside ICU procedures for the diagnosis and management of critical illness

Point-of-care ultrasound:

Independent of the specific disease being managed, I am interested in the application of ultrasound performed by the clinician at the time of direct patient care. This application of point-of-care ultrasound can improve the safety of medical procedures, improve diagnostic accuracy, and help direct patient management and further diagnostic testing.

**Clinical Interests**

As a clinician-educator, my academic interests focus on bedside teaching, as well as course and curriculum development.

Specifically, I am interested in the following:

1. Developmental learning theory for training future physicians: I am primarily interested in teaching learners the skills they need to become better future clinicians. However, I am particularly interested in teaching students, and young physicians, how to become better leaders and teachers themselves. It is also my goal for learners to develop the skills necessary to continue to learn after they finish training.
2. Teaching procedures: In additional to teaching basic and advanced procedures, I focus on improving procedure safety and teaching less invasive procedural approaches.
Nicholas Stollenwerk, M.D.

3. Expanding the application of point-of-care ultrasound: I am interested in expanding use in both in the inpatient and outpatient clinical setting, and for diagnosis and for therapeutic procedures.
Nicholas Stollenwerk, M.D.

Flora Wai Stondell welcomes LGBT patients.

Philosophy of Care

I am committed in providing the highest standard of care for our patients. Care that is knowledgeable, accessible, and sensitive to their needs.

Clinical Interests

Flora specializes on Bone Marrow/Stem Cell Transplant, which includes: autologous, allogeneic (matched and mis-matched donor), and haplo-identical transplant. She focuses on the care of patients during pre-transplant, during transplant course (in the hospital setting), and post-transplant. She performs bone marrow biopsies and aspirations; and supervises the infusion of cryopreserved stem cells for autologous transplant patients. She also assists in providing consultation for patients that may be eligible for transplant.

Steven W. Thorpe, M.D.

Steven W. Thorpe welcomes LGBT patients.

Philosophy of Care
Dr. Thorpe strives to provide compassionate, evidence based care to all patients and their families. He works closely with a multidisciplinary team to provide expert coordinated care to patients with sarcoma and other tumors of the musculoskeletal system.

Clinical Interests
Dr. Thorpe is a fellowship trained musculoskeletal oncologist with expertise in bone and soft tissue sarcomas in both adult and pediatric patients. He specializes in limb sparing resections and reconstructions for bone and soft tissue sarcomas of the extremities. He also has expertise in the surgical management of metastatic bone tumors and benign bone and soft tissue tumors. Dr. Thorpe has particular interest in pediatric limb salvage procedures and surgical resections for malignant sarcoma of the pelvis.

Research/Academic Interests
Outcomes and innovations in limb sparing surgery for treatment of bone and soft tissue sarcoma. Outcomes and innovations in pelvic resections and reconstruction for sarcoma of the pelvis. Determination of role of cancer stem cells in the propagation and development of metastases and relapse in bone and soft tissue sarcoma.

Elisa K. Tong welcomes LGBT patients.

**Clinical Interests**

Elisa Tong is a general internist who helps take care of patients in the clinic and hospital settings. Her area of interest is in tobacco cessation and its cross-cutting impact on health and wellness for smokers and their families. Tobacco not only is an important risk factor for cancer and cardiopulmonary death and disease, its use can increase infections, worsen surgical healing, and affect the metabolism of medications.

The U.S. Surgeon General has also determined there is no safe level of smoke exposure for nonsmokers. Since tobacco is one of the most addictive substances, it can take at least 8-12 tries before a smoker can quit for good, but each try is a closer step to success. UCDMC offers tobacco cessation classes (livinghealthy.ucdavis.edu) and the California Smokers' Helpline at UC San Diego offers free telephone counseling and educational materials in different languages (www.nobutts.org).

**Research/Academic Interests**

Dr. Tong's research interests are in tobacco control policy and cessation, with special interests in secondhand smoke, diverse and underserved populations (particularly Asians), and health systems change.

She is the founding Project Director for "UC Quits", the UC-wide Tobacco Cessation Network across the 5 UC medical centers that has used the electronic medical record to help address tobacco at every clinical encounter and connect with the California Smokers' Helpline at UCSD. She has also worked on tobacco cessation interventions targeting community college students, Medi-Cal members, and Chinese smokers living with household nonsmokers.

Philosophy of Care

My philosophy of care is to establish a partnership with my patients to enhance their health and manage their illness. Focusing on the whole person is paramount to my medical practice because of the impact different parts of our bodies and the environment we live in have on health and disease.

Clinical Interests

Dr. Tu is a board certified general internist who has provided comprehensive medical care for nearly 25 years.

Research/Academic Interests

Dr. Tu's research interests encompass early detection of cancer, cardiovascular health, tobacco control, cross cultural care, the dissemination and implementation of evidence-based interventions, and health care delivery in complex systems.

Joseph M. Tuscano welcomes LGBT patients.

Clinical Interests

Dr. Tuscano's areas of specialty include the treatment of leukemia, lymphoma, MDS, and multiple myeloma. He is also a member of the adult stem cell transplant team. He has both basic/translation and clinical research interests that include the development of novel antibody and other immune-based therapeutics for hematologic malignancies.

Shiro Urayama welcomes LGBT patients.

**Philosophy of Care**
Focused on patient-centered clinical care and researching application of technology for developing best care for gastrointestinal diseases in the patient.

**Clinical Interests**
Dr. Shiro Urayama specializes in advanced endoscopy including EUS (Endoscopic Ultrasound), ERCP (Endoscopic Retrograde Cholangiopancreatography) and various intra- and extra-luminal interventions including endoscopic mucosal resections/submucosal dissections, ablative procedures, and placement of luminal prosthesis for luminal and periluminal diseases.

He has published studies on the endoscopic approaches in GI cancers and investigations on novel detection modalities of precancerous lesions. Specifically his research involves the application of endoscopic ultrasound, tumor markers for early diagnosis of pancreatic cancers, and the applications of optical technologies in early detections of dysplasia and cancer in esophagus.

**Research/Academic Interests**
Diagnostics and endotherapeutics for gastrointestinal malignancies specifically in upper GI tract and pancreaticobiliary organ. Translational research in pancreatic and esophageal cancer for development of early detection biomarkers.

Richard Valicenti, M.D., M.A., FASTRO

Philosophy of Care
Dr. Valicenti believes in being tough on cancer, using a multi-disciplinary team approach and leading therapeutic weapons to maximize outcomes while preventing side effects. He emphasizes that innovation is critical to the advancement of new cancer treatments and that education is essential for the benefit of patients, families and the next generation of cancer caregivers.

Clinical Interests
Dr. Valicenti is nationally and internationally recognized in the treatment of prostate cancer and other tumors. His clinical interests focus on prostate cancer, gynecologic tumors, genitourinary malignancies and brain tumors. He is also interested in the use of prostate seed implantation and Gamma Knife for cancer treatment.

Research/Academic Interests
Dr. Valicenti is conducting clinical research to evaluate multi-modality therapies for clinically localized prostate cancer. In addition, he is carrying out outcome-based studies addressing quality-of-life questions and exploratory analyses of large databases.

Andrew Vaughan welcomes LGBT patients.

Clinical Interests
One of the earliest steps in either the generation of leukemia, or the genesis of a solid tumor is a break in DNA that is mis-repaired. In each case, the null hypothesis is that such breaks occur at random. In the case of leukemia, it is apparent that such breaks may be targeted to specific genes by aberrant action of normal gene products such as Activation Induced Cytidine Deaminase (AID). For the generation of solid tumors, the deletion of large tracts of DNA containing tumor suppressor genes may also be regulated by local DNA secondary structure and/or epigenetic modification. Proof of cellular control over such early events in tumorigenesis would disprove the null hypothesis and open up new areas for suppressing such tumor promoting events.

Clinical Interests: Dr. Wang's clinical interests include development, implementation and maintenance of technical excellence in noninvasive medical imaging as well as imaging informatics.

Research/Academic Interests: Dr. Wang's research interest is in the development of dynamic molecular imaging methods (with emphasis on dynamic PET/CT) to visualize and characterize molecular processes quantitatively. His research commonly integrates high-resolution dynamic data acquisition with the design of advanced computational molecular imaging algorithms to derive quantitative imaging biomarkers. In close collaboration with clinicians, Dr. Wang's research group translates these quantitative imaging techniques to improve clinical diagnosis, prognosis and therapy response assessment in various diseases.

Michael S. Wong welcomes LGBT patients.

Understanding the tremendous privilege it is to be able to provide plastic and reconstructive surgeries to my patients, I strive to provide all with compassionate and high-quality care. By listening to my patients, I seek to understand their goals and desires, as well as to foster a trusting partnership that allows us to develop and successfully carry out an individualized and personalized plan that ultimately best meets their needs and expectations. Being in an academic practice, I value teaching and the education of my patients as an integral part of informed decision making. I pride myself in taking the time to ensure questions and concerns are all addressed prior to proceeding with surgery, another way I endeavor to build a strong doctor-patient relationship.

**Philosophy of Care**

Dr. Wong is a board certified plastic surgeon offering general plastic and reconstructive services to men, women, and children with aesthetic concerns or reconstructive needs resulting from trauma, cancer, and weight loss. He has special interest in the unique challenges presented by patients who have had significant weight loss and serves as Director of Body Contouring After Weight Loss.

**Clinical Interests**

Dr. Wong’s research focuses on two areas, that of improving patient outcomes and quality of life through decreasing complications in high-risk surgical patients, improving postoperative pain as well as offering traditional excisional and more contemporary tissue preservation techniques for post-bariatric body contouring. He has been and continues to be Principal Investigator on several prospective randomized clinical trials investigating interventions designed to improve patient outcomes and quality of life, including sternal plating and negative pressure therapy in high-risk patients. Being interested in improving patient access, Dr. Wong also works closely with UCD Transplant Surgeons performing panniculectomies in End-Stage Renal Disease patients, converting previously denied patients into patients eligible for kidney transplantation.

Ted Wun's clinical interests are malignant and non-malignant hematology and he maintains an active clinical practice. His primary areas of research have been in the pathophysiology and complications of sickle cell disease (SCD) and the epidemiology of venous thromboembolism with focus on cancer-associated thrombosis.

He and his colleagues demonstrated significant platelet and leukocyte activation in SCD and described platelet-erythrocyte aggregates in these patients. He has participated in several multi-center therapeutic trials in SCD and is the former Chair of the Sickle Cell Disease Advisory Committee of the National Heart, Lung, and Blood Institute.

He is presently co-PI on an NHLBI R21 determining the incidence of cancers in patients with SCD, and UC Davis PI for a HRSA funded SCD treatment demonstration project and the NHLBI funded SCD Implementation Consortium. Over the last decade he and colleagues at UC Davis have extensively described the epidemiology of venous thromboembolism (VTE) in patients with a variety of cancers. This widely cited work has identified certain cancer types and predictive factors associated with a high risk of symptomatic VTE and informed large prophylactic trials. More recently he founded the Center for Oncology Hematology Outcomes Research and Training (COHORT) with the goal of using innovative and robust epidemiological methods and large datasets to determine outcomes in hematological and oncological diseases with a focus on long term complications and health outcomes disparities.

In his role as associate dean for research in the School of Medicine, Wun is responsible for expanding the breadth and depth of research at the health system, as well as implementing the health system's 2017 Strategic Plan to increase innovative research.

He and his colleagues demonstrated significant platelet and leukocyte activation in SCD and described platelet-erythrocyte aggregates in these patients. He has participated in several multi-center therapeutic trials in SCD and is the former Chair of the Sickle Cell Disease Advisory Committee of the National Heart, Lung, and Blood Institute.

He is presently co-PI on an NHLBI R21 determining the incidence of cancers in patients with SCD, and UC Davis PI for a HRSA funded SCD treatment demonstration project and the NHLBI funded SCD Implementation Consortium. Over the last decade he and colleagues at UC Davis have extensively described the epidemiology of venous thromboembolism (VTE) in patients with a variety of cancers. This widely cited work has identified certain cancer types and predictive factors associated with a high risk of symptomatic VTE and informed large prophylactic trials. More recently he founded the Center for Oncology Hematology Outcomes Research and Training (COHORT) with the goal of using innovative and robust epidemiological methods and large datasets to determine outcomes in hematological and oncological diseases with a focus on long term complications and health outcomes disparities.

In his role as associate dean for research in the School of Medicine, Wun is responsible for expanding the breadth and depth of research at the health system, as well as implementing the health system's 2017 Strategic Plan to increase innovative research.

Title
Associate Dean for Research, School of Medicine
Director of the UC Davis Clinical and Translational Science Center
Chief, Division of Hematology and Oncology

Specialty
Cancer, Hematology/Oncology, Internal Medicine, Pathology and Laboratory Medicine

Department
Internal Medicine
Office of the Dean, School of Medicine

Division
Hematology and Oncology

Center/Program Affiliation
Clinical and Translational Science Center
UC Davis Comprehensive Cancer Center
Theodore Wun, M.D., FACP

Address/Phone
UC Davis Comprehensive Cancer Center, 2279 45th Street Sacramento, CA 95817
Phone: 916-734-5959

Additional Phone
Phone: 916-734-3772
Physician Referrals: 800-4-UCDAVIS (800-482-3284)

Education
M.D., Albany Medical College, Albany NY 1984
B.S., Union College, Schenectady NY 1982

Internships
Harbor-UCLA Medical Center, Torrance CA 1984-1988

Residency
Harbor-UCLA Medical Center, Torrance CA 1984-1987
Chief Resident, Harbor-UCLA Medical Center, Torrance CA 1987-1988

Fellowships
City of Hope National Medical Center, Duarte CA 1992
Harbor-UCLA Medical Center, Torrance CA 1988-1989
UC Davis Medical Center, Sacramento CA 1989-1992

Board Certifications
American Board of Internal Medicine, 1987
American Board of Internal Medicine, Hematology, 2010
American Board of Internal Medicine, Medical Oncology, 2011

Professional Memberships
American College of Physicians
American Society of Clinical Oncology
American Society of Hematology
Association of Program Directors in Internal Medicine
Association of Subspecialty Professors
Hemostasis Thrombosis Research Society
International Association of Innovation Professionals for Sickle Cell Adult Providers Network
International Society for Thrombosis and Hemostasis
Southwest Oncology Group

Honors and Awards
Eleventh Annual Tanaka Lecturer at Harbor-UCLA Medical Center, 2009
Award for Excellence in Education, UC Davis Health System, 2004
Postgraduate Medical: Fellow, American College of Physicians-American Society of Internal Medicine, 2000
Postgraduate Medical: National Blood Foundation Scholar, 1996
Postgraduate Medical: FIRST Award, NIH/NHLBI, 1995
Postgraduate Medical: Osler Institute Teaching Award, 1993
Theodore Wun, M.D., FACP

Postgraduate Medical: Distinguished Teaching Award, Department of Medicine, Harbor-UCLA, Medical Center, 1989
Undergraduate: Phi Beta Kappa, Alpha of N.Y., 1982
Undergraduate: Magna Cum Laude, 1982
Medical School: AOA, Theta of N.Y., 1982

Dr. Yamamoto's scientific interests focus on developing and investigating novel imaging technologies and integrating these innovations into clinical radiotherapy to improve therapeutic gains in cancer radiotherapy. Areas of active research include: (1) the development of lung ventilation/perfusion imaging based on computed tomography (CT) and deformable image registration, and applications in lung cancer radiotherapy to reduce pulmonary toxicity, and (2) the investigation of radiomics, an emerging method that applies advanced mathematical algorithms to extract quantitative features predictive of gene expression or clinical outcomes from imaging data, toward personalized radiotherapy.

Research/Academic Interests

- **Specialty**: Cancer, Medical Physics, Radiation Oncology
- **Department**: Radiation Oncology
- **Division**: Radiation Oncology
- **Center/Program Affiliation**: UC Davis Comprehensive Cancer Center
- **Additional Phone**: Physician Referrals: 800-4-UCDAVIS (800-482-3284)
- **Languages**: Japanese
- **Education**: M.S., Osaka University, Suita, Osaka, Japan 2004
  Ph.D., Osaka University, Suita, Osaka, Japan 2007
  B.S., Osaka University, Suita, Osaka, Japan 2002
- **Fellowships**: Stanford University, Stanford CA 2011
- **Board Certifications**: American Board of Radiology, Therapeutic Radiological Physics, 2014
  Japanese Board of Medical Physics (JBMP), 2007
- **Professional Memberships**: American Association of Physicists in Medicine (AAPM)
  American Society for Radiation Oncology (ASTRO)
  Japan Society of Medical Physics (JSMP)
  Japan Society of Pulmonary Functional Imaging
  Japanese Society for Therapeutic Radiology and Oncology (JASTRO)
- **Honors and Awards**: Science Council Session, the American Association of Physicists in Medicine (AAPM), 2013
  Young Scientist Sponsorship, European Respiratory Society (ERS), 2011
  Scientific Presentation Award, International Workshop for Pulmonary Functional Imaging, 2011
  John S. Laughlin Science Council Research Symposium, American Association of Physicists in Medicine, 2011

Clinical Interests

My focus of research is on advanced imaging technology for cancer detection, diagnosis, and surgical guidance. I have spent the past 8 years working in Dr. John M. Boone’s research lab where we have been engaged in the design, development, and evaluation of flat-panel based cone beam computed tomography (CT) for dedicated breast imaging applications in order to improve the early detection of breast cancer.

I have also been closely involved in the on-going clinical trials related to breast cancer imaging, involving various imaging modalities such as breast CT, breast PET/CT, breast tomosynthesis, and multiple imaging tasks such as early detection of breast cancer, staging of breast cancer, response study of breast cancer from neoadjuvant treatment.

Recently, I have been focusing on using an advanced 3D imaging technique, micro-CT, for surgical guidance. Currently a two-dimensional x-ray radiograph of a lumpectomy specimen is routinely used to intra-operatively evaluate the completeness of tumor removal by visual analysis. This limited technology is the primary cause of a 20 to 40 percent incidence of second lumpectomy surgeries nationwide. We propose to develop a high resolution three dimensional CT system to image breast tumor specimens during a lumpectomy surgery. We hypothesize that prompt, high resolution, and three dimensional image data will provide breast surgeons and radiologists the ability to more accurately delineate margins of excised breast lesions thereby reducing the lumpectomy re-excision rate.

Title
Assistant Adjunct Professor

**Philosophy of Care**

I firmly believe that patients with cancer are best managed with a multidisciplinary team approach, and that patients, along with their family members, are integral to the decision-making process. I feel extremely fortunate to be a part of our National Cancer Institute-designated cancer center, and to work alongside the dedicated physicians, nurses and other affiliated personnel who make it possible for our patients to have some of the very best care available anywhere in the world. In addition to offering state-of-the-art care and clinical research trials, we have the unique opportunity to discuss patients with lung cancer and other thoracic malignancies before an expert panel of subspecialists at our "tumor board." Whether it is to diagnose, treat or palliate lung cancer, it is through our tumor board, or through close consultation with my medical oncology, thoracic surgery, radiation oncology and thoracic radiology colleagues, that I am able to devise the best strategies for my patients. As an interventional pulmonologist, there are a variety of procedural techniques I can provide to establish a difficult diagnosis, to manage pleural effusions, and to treat endobronchial complications such as hemoptysis and bronchial obstruction. However, I know care must be individualized, as no single strategy works for all patients. Perhaps more so than for any other disease, a patient's overall condition as well as their desires and expectations play the most important role in this decision-making process.

**Clinical Interests**

Dr. Yoneda's primary outpatient clinical interests are in lung cancer and the thoracic complications associated with other malignancies. As an interventional pulmonologist, he is particularly interested in new and innovative techniques for the diagnosis, management and palliation of pleural effusions and endobronchial lung cancer. It is his belief that technological advances in these fields have improved patient comfort and safety, while improving outcomes and reducing length of hospitalizations. While a variety of procedural approaches are available, he believes that no single strategy works for all patients, and care must be individualized. Dr. Yoneda's hospital-based clinical interests are in general pulmonary and critical care medicine.

Dr. Yoneda's clinical research is focused on lung cancer, particularly with regard to the role of interventional pulmonology in the diagnosis, management and palliation of lung cancer, and the development of interstitial lung disease in lung cancer patients. He also conducts clinical trials in high-altitude medicine, chronic obstructive pulmonary disease (COPD), asthma and sepsis. His basic-science research has involved the study of alterations in airway epithelial cells exposed to tobacco smoke and on differential gene expression in lung cancer.
