Provider referral and transfer assistance:
800-4-UCDAVIS
(800-482-3284)

medicalgroup.ucdavis.edu
UC Davis Medical Group offers nationally renowned primary care and specialty expertise based at UC Davis Medical Center and multiple medical offices across the greater Sacramento region. Medical group physicians, nurse practitioners and clinical nurse specialists emphasize wellness and prevention, apply the latest knowledge to solve health problems and offer access to promising clinical trials, newly proven therapies and advanced technologies when needed.

FOR PATIENTS
Find a UC Davis physician, nurse practitioner or clinical nurse specialist
Consumer Resource Center: 800-2-UCDAVIS (800-282-3284)

• General information about available providers and services
• Assistance with appointments and referrals
• Information about accepted insurance plans

Established UC Davis patients can also use the MyChart web-based portal to communicate with their care teams, request certain appointments and refills, access medical records and more.

FOR HEALTH PROFESSIONALS
Outpatient referrals and provider phone consultations
UC Davis Physician Referral Center: 800-4-UCDAVIS (800-482-3284) Option #2 Monday | Friday, 8 a.m. to 5 p.m. Or online (non-urgent) requests via referrals.ucdavis.edu

• Information about availability of specialty services
• Coordination and status of referrals to specialty services
• Assistance for provider-to-provider phone consultations with specialists

Acute interfacility transfers and after-hours consultations
24/7 Transfer Center: 800-4-UCDAVIS (800-482-3284)

• Round-the-clock, R.N.-led coordination of acute interfacility transfers
• After-hours coordination of emergent provider-to-provider telephone consultations for complex or unusual cases
• Transfer requests evaluated based upon clinical urgency, availability of resources and other factors

Referring physicians can receive real-time access to test results and clinical information for their patients at UC Davis through the PhysicianConnect online electronic medical record.
Lisa Abramson, M.D.

Clinical Interests  Dr. Abramson's interests lie in general and laparoscopic surgery of infants, children and adolescents. Special interests are in neonatal surgery and pediatric oncology.

Title  Assistant Clinical Professor of Surgery

Specialty  Pediatric Surgery, Surgery - Pediatric

Department  Surgery

Division  Pediatric Surgery

Center/Program Affiliation  UC Davis Children's Hospital

Address/Phone  Cannery Building, 3301 C St. Suite 1100 Sacramento, CA 95816

It is a privilege to care for children and their families during the time of their critical illness. I strive to incorporate the science and art of medicine in my everyday practice such that each child and family receives the best medical care in a supportive and respectful environment. Having grown up in the San Joaquin Valley, I am honored to join UC Davis Children's Hospital's team and contribute to the well-being of our community's children.

Dr. Aghamohammadi has always had a passion for education, she enjoys teaching principles of medicine, pediatrics, and critical care to medical students, residents, and nurses alike. Her research interests include long-term outcomes and prognosis as related to pediatric critical care medicine.

Marcy Lora Ahrons welcomes LGBT patients.

**Philosophy of Care**

Working as a pediatrician offers me the opportunity for long-term relationships with both my patients and their parents. I chose my specialty in order to be able to care for children while they are sick, but also to prevent illness through education. Being a mother of two children myself has made me a better pediatrician. I believe in a partnership between myself, the parents and the child. In this partnership, I emphasize the importance of regular well-child checkups during which we all can talk about nutrition, development, safety and other preventive issues that are important to overall good health. I try to be approachable, so that my patients and their parents feel comfortable asking questions. Through UC Davis, I can offer my patients personal and quality local everyday care, in addition to referral to top specialists for more complicated cases.

**Clinical Interests**

Marcy Ahrons enjoys caring for children when they are sick, but strives to prevent illness through patient education. She emphasizes the importance of regular well-child checkups to discuss nutrition, child development, safety and preventive health issues. Ahrons believes in creating a health partnership with both children and their parents. She enjoys establishing long-term relationships with her patients and their families.

Debbie Aviva Aizenberg welcomes LGBT patients.

**Philosophy of Care**
My goal is to provide experienced specialty care in a manner that is compassionate. Each patient is valued as a unique individual. I communicate with patients and their families with kindness and empathy. Providing excellent care while taking the time for the patient and family to feel comfortable about medical decisions is of utmost importance.

**Clinical Interests**
Dr. Aizenberg specializes in the treatment of diseases of the ears, nose, throat, sinuses and head and neck region. Her services include comprehensive management of hearing and balance disorders, sinus and nasal problems, and sleep apnea.
In addition, she has a special interest in pediatric disorders of the ears, nose and throat and providing care for children is a significant part of her practice.

**Research/Academic Interests**
Dr. Aizenberg is interested in clinical research that can directly impact the care of otolaryngology patients. She collaborates with other physicians both in her department and within other departments on high impact clinical research.
She also is interested in clinical quality improvement projects. Dr. Aizenberg also runs the UC Davis Women in Otolaryngology Interest group. This group aims to inspire, and encourage women otolaryngologists in training to achieve their personal and professional goals.

Dua Massey Anderson welcomes LGBT patients.

**Philosophy of Care**
In my practice, excellence in care is the goal in every single patient encounter. It is so important to communicate well with patients, families, and colleagues to give the safest and most comfortable experience possible.

I am honored to work with members of UC Davis Medical Center and Children's Hospital to give such amazing focus to our most precious patients.

**Clinical Interests**
Dr. Anderson has strong interests in Pediatric Anesthesiology and Congenital Cardiac patients and procedures. She is also passionate about academic practice, both in terms of clinical teaching as well as clinical research.

**Research/Academic Interests**
Dr. Anderson's research interests include Congenital Cardiac Anesthesia, intraoperative transfusion practices, and resident education. She also contributes to Quality and Safety Initiatives within clinical practice.

Sheila Asare-Bediako welcomes LGBT patients.

**Philosophy of Care**

One of the joys of being in Pediatrics for Dr. Asare-Bediako is that it offers an opportunity for continuity of care and the privilege of taking care of patients from infancy into young adulthood. She enjoys being part of children's many milestones and development over time. She considers each child and parent to be unique, and she treats them as such by establishing unique long-term relationships with each.

Dr. Asare-Bediako looks forward to meeting her patients and to working in partnership with parents for the medical care and wellbeing of their children.

**Clinical Interests**

Clinically, my focus is preventive care through education of patients and parents. I enjoy working with patients of all backgrounds and needs, and as a pediatrician I work to address health care disparities across ethnic and socioeconomic backgrounds.

I firmly believe in forming strong health partnerships with patients and parents, and when I see patients (well child check-ups especially) I focus on important issues such as nutrition, safety, growth and development.

Additionally, I enjoy adolescent medicine and I'm passionate about mental health conditions in children and adolescents.

I am comfortable caring for patients in times of illness and those with complex medical needs. I view my pediatric practice as an opportunity to nurture and enhance the lives of all my patients.

Smita Awasthi, M.D.

Smita Awasthi welcomes LGBT patients.

Philosophy of Care
I aim to provide the best care to my patients and their families, in a safe and compassionate environment. Having grown up in central California and completed a large part of my medical training at UC Davis, I am committed to advancing care and improving the health and well-being of our diverse community through patient care, research, and education.

Clinical Interests
Dr. Awasthi is triple board certified (Dermatology, Pediatrics, and Pediatric Dermatology) and is the Director of Pediatric Dermatology at UC Davis. Although she has a wide range of clinical experience in the diagnosis and management of skin disorders, her particular areas of interest include atopic dermatitis (eczema), acne, and genetic disorders (including ichthyosis and blistering disorders).

Research/Academic Interests
Dr. Awasthi’s current research areas include atopic dermatitis, neonatal skin disease, and the microbiome of the skin. She is an active member of the Society for Pediatric Dermatology and the Pediatric Dermatology Research Alliance (PedRA) and has published in several journals.

We live in an age where there are tremendous opportunities to keep children healthy by preventing infections. I aim to work with children and their parents to optimize health. When an infection is suspected or occurs, I partner with the parents and the child to ensure that appropriate diagnosis and treatment ensues.

Dr. Blumberg's main areas of interest are preventing and treating childhood infections. He is involved in clinical vaccine research and childhood immunization policies, and is also head of Infection Control at Shriners Hospital for Children Northern California.

Dr. Blumberg's research interests include clinical vaccine studies and prevention and treatment of surgical site infections.

Clinical Interests

Dr. Boakes' clinical interests include treatment of hip dysplasia in children and adolescents, congenital and acquired limb deformity, leg length discrepancy, congenital disorders of the foot (including clubfoot), and fracture care. Dr. Boakes' research interests include muscle physiology and adaptation; muscle structure/function relationships; spastic muscle; muscle adaptation to leg lengthening; in vivo sarcomere length measurement; gait analysis, and physical fitness.

Philosophy of Care

With my expertise and interest in muscle function and physical fitness I encourage patients to participate in their own healing with exercise, muscle retraining and therapy when needed. I frequently advise non-operative treatment before recommending surgery. I try to incorporate my patients' needs as well as their parents' goals in developing a treatment plan. I strive for excellence in surgery, using safe and proven techniques that I know will improve patients' function. I also participate in 'cutting-edge' research studies of new techniques which will benefit my patients.

James E. Boggan, M.D.

Dr. Boggan heads a specialty team that treats difficult-to-resect tumors of the head, neck and surrounding structures. He also is an expert in pediatric neurosurgery.

Dr. Boggan is interested in the innovative use of lasers and other energy sources for treating brain cancers, including photodynamic therapy and neutron-capture therapy for treatment of glioblastomas. His research investigations include retinoic acid receptor expression in primary and metastatic brain tumors, and whether gadolinium texaphyrins (contrast MRI agents) can make high-grade gliomas and glioblastomas more radiosensitive.

Thomas A. Bullen, M.D.

Thomas A. Bullen welcomes LGBT patients.

**Philosophy of Care**

I enjoy children and their families and the relationship a pediatrician has with them. I look on my practice as a partnership with my patients and their families. I emphasize an active participation with the family in the care of their children. I try to provide education to help parents understand their children's normal growth and development, as well as specific illnesses that may affect them. Through University Pediatric Associates, I have the unique ability to provide my patients with the full spectrum of good primary, pediatric care. We also have a good working relationship with other specialists in all areas of pediatrics.

**Clinical Interests**

Thomas A. Bullen emphasizes active participation by the family in caring for a child. He provides educational information to help parents understand their child's normal growth and development as well as any specific illnesses they may encounter. He considers his practice as a partnership with his patients and their families.

Philosophy of Care

Pediatrics was the specialty I enjoyed most in medical school. It is a field that combines prevention and treatment. Rather than focusing strictly on illness, I prefer to concentrate on wellness in a broader sense. Wellness includes physical health, but is also influenced by family interactions, cognitive development and emotional and behavioral well-being. My work with patients is distinguished by an evidence-based practice, which avoids treating colds and other viral illnesses with antibiotics. I also assess family and other environmental factors that influence a child's health. Providing children with a safe and nurturing environment is important to their health. Good health necessitates avoiding health-impairing behaviors, including smoking, dietary excess and sedentary lifestyle. In addition, children's attitudes toward school and their academic success contribute to their ultimate health and well-being. In my proactive approach, I focus on early literacy, school readiness and school performance.

Clinical Interests

Robert S. Byrd's clinical expertise includes wellness, physical health, cognitive development, and emotional and behavioral well-being. His pediatric practice is distinguished by an evidence-based philosophy that avoids treating colds and other viral illnesses with antibiotics. Byrd focuses on early literacy, school readiness and school performance. His research in the area of delayed school entry was published in the journal *Pediatrics*.

Kids are not simply small adults. Their care requires a special knowledge and compassion unique to children. I strive to help advise parents through the challenges of parenthood, while helping patients navigate through the journey from childhood to adulthood.

As a board certified pediatrician, I am committed to remaining current with the latest pediatric developments and approaches to children's health, in order to ensure that I am providing the best care possible.

"Dr. Jim" cares for patients from birth through adolescence. He has provided pediatric care in the Rocklin, Lincoln, and Roseville areas since 2003, and is now available in Auburn as well.

As a general pediatrician, he has experience in all facets of pediatric care. Special clinical interests include newborn care, sports medicine, acne, ADHD, and gastrointestinal problems.

Melinda Youeen-Wu Chang welcomes LGBT patients.

Dr. Chang strives to develop a collaborative relationship with her patients, so that they can actively participate in their own care. She believes that patient education is essential to developing and implementing a successful treatment plan. Her goal is to understand how each patient is individually impacted by his/her ophthalmic disorder, so that she can help patients return to the activities most important to their quality of life.

Dr. Chang is a dual fellowship trained pediatric and neuro-ophthalmologist. She provides medical and surgical care to children and adults with neurologic disorders that affect the eyes (especially the optic nerves) or cause double vision. These disorders include, but are not limited to: brain tumors, stroke, multiple sclerosis, myasthenia gravis, idiopathic intracranial hypertension, temporal arteritis, optic neuritis, optic neuropathies, and strabismus.

Dr. Chang’s research focuses on the application of novel ophthalmic technologies, such as optical coherence tomography (OCT) and OCT angiography, to neuro-ophthalmic disorders. She explores the potential use of these instruments as a biomarker for neurologic conditions that have ocular manifestations. She is also interested in new methods and outcomes of strabismus surgery (surgery for eye misalignment).

**Philosophy of Care**
I treat my patients as if they are my own family. I understand that in order to truly care for a pediatric patient, one must also care for the entire family unit.

**Clinical Interests**
I am interested in providing quality and comprehensive health care to pediatric patients. My focus is on primary care, preventative medicine and acute care.

Kevin Patrick Coulter, M.D.

Kevin Patrick Coulter welcomes LGBT patients.

Clinical Interests
Kevin Patrick Coulter is well-known in the field of child abuse and neglect as an advocate for children. Coulter has consulted with the California Office of Criminal Justice Planning, American Academy of Pediatrics, and several San Francisco law enforcement agencies on training protocols for sexual abuse examinations and other issues related to child abuse. His research interests focus on various aspects of ambulatory pediatrics, primarily sexual child abuse and children in foster care.

Jonathan Dayan, M.D.

Philosophy of Care
Jonathan Dayan welcomes LGBT patients.

All children with known or suspected heart disease, along with their families, should be evaluated and treated with tenacity, fever, and compassion.

Clinical Interests
Dr. Dayan is a pediatric cardiologist at the Pediatric Heart Center, a division of the UC Davis Health System. His clinical interests include the evaluation and management of all ranges of congenital and acquired heart disease, from the simplest murmur to the most complex anatomic variations. His focuses primarily on cardiopulmonary exercise testing (CPET) in the pediatric population, as well as echocardiography, especially in utero diagnosis of congenital heart disease.

Research/Academic Interests
In addition to his clinical interests, Dr. Dayan believes strongly in education on all levels. Career-long learning is a critical component of modern medicine. He also enjoys teaching fellows, residents, medical students, patients and families.

As a 24 year veteran of Army Medicine I have come to recognize that healthcare is a team sport. As such, I actively seek the cooperative input of parents and primary caregivers in the care of my patients so that the therapeutic options I provide are practical and timely to the patient’s needs. Coordination of care with other sub-specialists is essential to the care of my patients. I am willing to consider integrating non-traditional options in their care. I consider it a great honor to provide for the healthcare needs of children.

I care for patients with all forms of Pediatric gastrointestinal disorders to include feeding difficulties, motility disorders, functional disorders of the bowel, Inflammatory Bowel Diseases, and nutritional disorders.

As a Helms Medical Acupuncture trained physician, I provide acupuncture to appropriate patients as an adjunct to traditional treatments in the care of children with functional and motility disorders of the gut.

Dr. de Lorimier is interested in the study of functional and motility disorders of the gastrointestinal tract as well as integrating non-traditional forms of healthcare in the care of his patients.

Constantine Dimitriades welcomes LGBT patients.

**Philosophy of Care**
I consider it a privilege to take care of a sick child, and strive to do so in a professional, compassionate, and complete way. With each case, I work to make sure that children and families understand their care and are able to ask the questions that allow them to be confident in the quality of their care.

**Clinical Interests**
As a full-time, board-certified pediatric intensivist, Dr Dimitriades provides clinical services for critically ill pediatric patients in a tertiary pediatric intensive care unit (PICU). In this clinical arena, Dr Dimitriades leads a multidisciplinary, specialized team to help recognize, resuscitate, stabilize, and provide on-going care for infants and children who with life-threatening illnesses.

**Research/Academic Interests**
Dr Dimitriades is interested in the use of high-fidelity simulation modeling for the training of pediatric healthcare providers to help improve performance in the care of critically ill children. Additionally, Dr Dimitriades is interested in the utilization of pediatric critical care registry data for continuous improvement in care for pediatric patients in pediatric intensive care units.

Victoria Dimitriades welcomes LGBT patients.

**Philosophy of Care**

I truly appreciate establishing a partnership with both my patients and their families- open communication lines ultimately make for the best patient care. I feel that being educated regarding your condition can make you your own best advocate- you should ask questions so that you can be prepared.

Finally, I feel that each child and situation is different, so I strive to recommend management plans which will be in the best interest of everyone involved.

**Clinical Interests**

Dr. Dimitriades sees patients for the following clinical conditions: Allergy: Food allergy, seasonal allergies, atopic dermatitis, recurrent hives, drug reactions, stinging insect reactivity Immunology, Recurrent infections, recurrent fevers, low immunoglobulins, and periodic fever syndromes.

**Research/Academic Interests**

Dr. Dimitriades research interests specific antibody deficiency, and recurrent infections of the ears, sinuses, and lungs. Additionally, she has an interest in patients with inflammation related to immune deficiency as well as hereditary periodic fever syndromes.

Diana L. Farmer welcomes LGBT patients.

Clinical Interests

Dr. Farmer, an internationally renowned fetal and neonatal surgeon, is chair of the Department of Surgery. She is known for her skilled surgical treatment of congenital anomalies and for her expertise in cancer, airway and intestinal surgeries in newborns. In 2010, Farmer was inducted as a fellow into the Royal College of Surgeons of England, becoming only the second woman surgeon from the United States to receive this prestigious honor. In 2011, she was elected to membership in the Institute of Medicine of the National Academies, one of the highest honors in medicine. Farmer is included in the 2010 edition of Who's Who Among American Women and has appeared on national television to discuss surgical innovations.

Research/Academic Interests

Farmer is principal investigator of several National Institutes of Health clinical trials on the effectiveness and safety of spina bifida treatments before birth, and she is researching a novel stem cell therapy for repairing damaged neural tissue in spina bifida patients. Farmer consistently has been recognized for her teaching and service by UC San Francisco, including the 2008 Family House Volunteer of the Year Award, 2009 Golden-Headed Cane Award (the highest faculty teaching award), 2001 and 2002 Outstanding Women Faculty Chancellor's Recognition Award, 2002 and 2008 Department of Surgery Excellence in Teaching Award and 2011 Holly Smith Award for Exceptional Service.

It is a privilege to work with children each day. Providing pediatric care is very rewarding as each day brings unique and interesting challenges. Children are fun, honest and resilient. I believe that immunizations and anticipatory guidance are key aspects to keeping children healthy and safe. I enjoy educating families about illnesses. I am proud to be a member of UC Davis Medical Group which provides quality and comprehensive medical care to patients.

Erik Orlando Fernandez y Garcia welcomes LGBT patients.

Philosophy of Care

It is Dr. Fernandez y Garcia's goal to address pediatric healthcare and health maintenance through the lens of family dynamics and cultural humility. He strives to form cooperative relationships with the parents of patients and their communities to ensure that his patient (the child) reaches his or her fullest potential. He hopes to propagate this philosophy by teaching pediatric residents at the UC Davis General Pediatric Clinic and the Wellspace Oak Park Clinic, and UC Davis medical students in the "Transforming Education and Community Health for Medical Students" (TEACH-MS program). He also brings this philosophy of care to his research in pediatric-based intergenerational mental healthcare.

Dr. Fernandez y Garcia is a Sacramento native who has come back to work in his community.

Clinical Interests

Dr. Fernandez y Garcia's clinical interests include asthma, nutrition and sports medicine.

Research/Academic Interests

Dr. Fernandez y Garcia's research interests focus on racial and ethnic healthcare disparities, parental depression identification and reduction of parental depression in pediatrics, and residential cultural competency education.

Kenneth A. Frank, M.D.

Philosophy of Care
As a pediatrician, I believe not only in providing quality care for sick children now, but also preventing future problems. Good health can be accomplished by working in partnership with the parents and the child. I emphasize the importance of regular well-child checkups during which we can talk about development, nutrition, safety, immunizations and other preventive issues. Being a parent myself has made me a better pediatrician. My goal is to give my patients the care and attention that I would give my own children. My association with UC Davis offers my patients access to a quality pediatric tertiary care network; and for serious or complicated illnesses, hospitalization at UC Davis Medical Center, one of the nation's leading academic medical centers.

Clinical Interests
Dr. Frank emphasizes preventive medicine as well as good medical care in his pediatric practice. He follows a holistic approach to health, assessing the needs of the whole person in addition to treating specific medical problems.

Rebecca Louise Freeman welcomes LGBT patients.

**Philosophy of Care**

Rebecca Freeman strives to embrace the unique challenges, perspectives and needs of every individual. Genetic Medicine is personalized for each patient, and she works to empower individuals and families in need of a diagnosis or healthcare management. Rebecca's goal is to promote informed decision making and collaborative care, emphasizing patient education and advocacy.

**Clinical Interests**

Rebecca Freeman provides genetic counseling services for pediatric and adult patients and their families who are at risk for or have been diagnosed with genetic conditions. She sees patients by herself and alongside physicians in the Division of Genomic Medicine. She is especially interested in the unique needs of LGBTQ+ patients as well as patients with differences/disorders of sex development (DSD). She is the program coordinator for the Enzyme Replacement Therapy (ERT) clinic serving individuals with Lysosomal Storage Disorders.

Abigail Claire Gelb Fruzza welcomes LGBT patients.

**Philosophy of Care**

I am strongly committed to improving the health and well being of children and adolescents with a wide variety of endocrine conditions. It is important to provide patients and their families with a comfortable environment to discuss medical diagnoses, management and treatment options, and allow for informed healthcare decisions. I enjoy building lasting relationships with patients and their families and I work hard to provide the highest quality of care for my patients.

**Clinical Interests**

I value medical education and public service, and strive for excellence in these areas. My involvement in the Pediatric Endocrinology Telemedicine clinic provides services to patients living in rural areas of Northern California as well as Oregon.

**Research/Academic Interests**

My subspecialty training included stem cell research and treatment for diabetes mellitus.

Pediatric ear, nose, and throat issues - such as breathing, hearing, sleep, swallowing, and speech - are often at the heart of key aspects of healthy growth and development. My goal is to provide the best possible care to optimize children's quality of life by addressing the conditions that can impact the development of these abilities.

Dr. Funamura is a pediatric otolaryngologist who cares for children with conditions affecting breathing, voice, swallowing, neck, nose & sinuses, speech, hearing, and ears. She is particularly concerned with conditions which affect children's ability to communicate, such as hearing loss and speech and language development.

Her clinical practice involves collaborating with many other specialties to provide the best possible care for children with complex airway, speech, swallowing, and hearing disorders. Her research interests include management of conditions affecting ears and hearing in children.

Dr. Funamura is interested in clinical research that can directly inform the care of pediatric otolaryngology patients, particularly in the area of ear disease and airway management. Her previous work includes research on tracheostomy practices and complications of ear infections.

Nicole S. Glaser welcomes LGBT patients.

**Philosophy of Care**

I believe that healthcare is a partnership among the care team, the patient and his or her family. Healthcare decisions should be made jointly after detailed discussions of risks and benefits of treatment decisions.

I do my best to insure that patients and their families have a thorough understanding of the physiological alterations underlying their illnesses such that they can make properly informed decisions.

In our clinic, many of our patients start their care with us as infants and stay with us for 10 - 15 years or more. By the time they "graduate" from our clinic as young adults, they are like family to us. Creating a safe, nurturing medical home for families of children with chronic illnesses is one of our most important jobs as healthcare professionals.

**Clinical Interests**

Dr. Glaser's main clinical interest is type 1 diabetes in children. She also cares for children with type 2 diabetes as well as children with other endocrine disorders including thyroid conditions, adrenal gland conditions and disorders of growth and puberty.

**Research/Academic Interests**

Dr. Glaser's main research interest is type 1 diabetes in children. Much of her research focuses on diabetic ketoacidosis, a potentially life-threatening complication of type 1 diabetes. She also has conducted research into methods of optimizing other aspects of type 1 diabetes care.

Albina S. Gogo, M.D.

**Philosophy of Care**
As a pediatrician, I enjoy the challenge of working with children of all ages at different stages of development. I'm a strong believer in preventive care. It's important for parents and caretakers to be educated in the fundamentals of nutrition, exercise and social development as well as to have a basic understanding of illness and disease. This makes it easier to manage the child's health care. I encourage my patients to participate in sports or other activities to develop their potential and promote physical, mental and social health. I try to create an atmosphere and environment that feels open and friendly as well as supportive for parents. I encourage questions, and I like to provide as much information as possible about the patient's health status and process of care.

**Clinical Interests**
Albina S. Gogo is a strong believer in preventive care and in providing parents with a basic understanding of childhood diseases and the importance of nutrition, exercise and social development to good health. She encourages her young patients to participate in sports and other activities that contribute to physical, mental and social well-being.

I team with my patients and their families to meet our common goal of fighting a disease in the smoothest way possible. As a pediatric nephrologist, I care for a wide range of problems affecting the kidneys, ranging from simple problems like protein and blood in the urine to dialysis and transplant. I love to take care of my patients, providing a helping hand to them and their families when they need it most.

Dr. Hagerman is medical director of the UC Davis MIND Institute and director of the Fragile X Research and Treatment Center. She has more than 20 years of experience in the field of neurodevelopmental disorders and is an internationally respected leader in fragile X research including fragile X syndrome, a genetic condition that is the leading cause of inherited intellectual disability and the leading single-gene cause of autism.

Dr. Hagerman, her husband, Dr. Paul Hagerman, and their research team are the discoverers of Fragile X-associated Tremor/Ataxia Syndrome (FXTAS), a late-onset neurodegenerative disorder. Randi Hagerman conducts clinical research on individuals with fragile X-associated disorders, including children and adults with fragile X syndrome, adult males with FXTAS, and women with fragile-X related conditions, such as fragile X-associated primary ovarian insufficiency (FXPOI).

Dr. Hagerman also conducts research that bridges the association between autism and fragile X syndrome. Her main area of research is on targeted treatments for neurodevelopmental disorders, including fragile X syndrome, autism, premutation disorders and Angelman syndrome.

Dr. Hagerman has written more than 200 peer-reviewed articles and numerous book chapters on neurodevelopmental disorders, and has written several books on fragile X. They include a 3rd Edition of Fragile X Syndrome: Diagnosis, Treatment, and Research which was published in 2002 by Johns Hopkins University Press, and Neurodevelopmental Disorders: Diagnosis and Treatment, published by Oxford University Press in 1999.

She serves on the editorial boards of the publications Journal of Developmental and Behavioral Pediatrics and Molecular Autism, and has worked to establish fragile X clinical programs and research programs throughout the world.

The National Fragile X Association in 2004 honored Randi and Paul Hagerman for their work on FXTAS, by establishing the Hagerman Award. It honored Randi Hagerman in 2008 with a Lifetime Achievement Award.

Robin Hansen, M.D., is Professor of Pediatrics, Director of the UC Davis Center for Excellence in Developmental Disabilities and Director of Clinical programs at the MIND Institute. She is a board-certified developmental behavioral pediatrician with vast experience in treating children with neurodevelopmental disorders as well as in clinical research. She has been the Director of the NICU Follow-up Clinic at UC Davis since 1985.

Her clinical research has focused on children's temperament, long-term effects of prenatal drug exposure, gene-environment interactions related to causes, early identification of autism spectrum disorders, and biomedical treatments for neurodevelopmental disorders.

She is currently a co-investigator on several grants investigating gene-environment interactions and immune dysfunction in autism spectrum disorders (CHARGE, MARBLES and the Autism Phenome Project), responsible for clinical assessment and medical data collection and analysis.

Dr. Hansen is the principal investigator for the Community Outreach and Translation Core of the UC Davis Center for Children's Environmental health, with ties to community agencies and consumers critical for recruitment and information dissemination.

She heads a multidisciplinary clinic that provides international consultant to Uganda and Mexico for establishing developmental screening and clinical assessment services.

Brian Michael Haus, M.D.

Philosophy of Care
Brian Haus, M.D., is a pediatric orthopedic surgeon and sports medicine specialist with UC Davis Childrens Hospital. Dr. Haus is a native of Sacramento, and is dedicated to providing world-class care to children in his community.

Clinical Interests
After graduating from Stanford, Dr. Haus completed training at the Harvard Orthopaedic Residency Program. This was followed by two year-long fellowships at Boston Children's Hospital/Harvard Medical School; one in Pediatric Orthopaedic Surgery and another in Pediatric and Adolescent Sports Medicine. Currently, he is the only Board Certified Pediatric Orthopaedist in Northern California who is also double-Board Certified in Sports Medicine. As such, he has expertise in managing the most complex sports injuries affecting the young athlete.

He has extensive experience in treating traumatic fractures and sports injuries of the hip/shoulder/knee/ankle in adolescents and children using open and arthroscopic techniques, including cartilage restoration. He also performs hip preservation surgery in young patients with complex hip disorders, including hip arthroscopy, periacetabular osteotomy (PAO) and open surgical dislocation.

In addition to serving as Chief of Pediatric Orthopaedic Surgery, Dr. Haus is also an Assistant Professor of Orthopaedic Surgery at the UC Davis School of Medicine. He is also Director of Pediatric Sports Medicine and Joint Preservation at Shriners Hospital for Children, Northern California. He is accepting new patients.

Brandi Hawk welcomes LGBT patients.

**Philosophy of Care**

My treatment philosophy is rooted in evidence-based practices, including conducting full assessments to determine each client’s needs and using targeted evidence-based treatments that have been shown in research to be effective. I also include parents or caregivers in their child's treatment as much as possible to promote positive change across settings and to support positive parent-child relationships.

**Clinical Interests**

Dr. Hawk is a psychologist at the UC Davis CAARE Center. She has special clinical interest and expertise in working with children and families with trauma histories, and has training in Parent Child Interaction Therapy (PCIT), PC-CARE, and Trauma-Focused Cognitive Behavioral Therapy (TF-CBT).

**Research/Academic Interests**

Dr. Hawk's current research interests include the development of a brief dyadic intervention for children and their parents, and the effectiveness of dyadic interventions in the treatment of trauma and disruptive behavior disorders. She has also studied the impact of institution-wide caregiver interventions on the development of young children reared in institutions in the Russian Federation, as well as the impact of early institutional rearing on children adopted to the United States from the Russian Federation.

Shinjiro Hirose, M.D.

Shinjiro Hirose welcomes LGBT patients.

Clinical Interests
Dr. Hirose is pediatric surgeon specializing in minimally invasive and cancer-related procedures. He serves as chief of pediatric surgery at UC Davis Children's Hospital and is the director of pediatric surgery for the adjoining Shriners Hospitals for Children – Northern California. Dr. Hirose specializes in minimally invasive surgery for gastro-intestinal, biliary, liver and thoracic disorders in fetuses and children, and is a nationally recognized children's cancer surgeon. He is an expert in the development and use of surgical robotics in children. His specific clinical interests also include chest wall deformities and hepatobiliary surgery.

Research/Academic Interests
Dr. Hirose's research interests include:

- clinical innovation
- use of robotics in fetal intervention
- fetal surgery
- surgical device development, and
- surgical education

Kristin Robbins Hoffman welcomes LGBT patients.

**Clinical Interests**

Dr. Hoffman is a neonatologist with a particular interest in improving the care of neonates through simulation-based education of nursing, medical students, residents, and fellows. She also is interested in providing care to infants in our surrounding communities through telemedicine. Dr. Hoffman is also interested in the neurodevelopmental outcomes of term infants at high risk for injury due to perinatal insults or congenital heart disease.

**Research/Academic Interests**

Dr. Hoffman's research interests include Neuroprotection, telemedicine and simulation.

Julie Lynn Ingwerson welcomes LGBT patients.

Dr. Ingwerson joined UC Davis and Shriners Hospitals for Children to be a part of the stellar multi-disciplinary, integrated treatment team for athletes of all ages and abilities. She has always had a passion for exercise and sport as an athlete herself as well as with her professional pursuits. Dr. Ingwerson obtained her B.S. in Exercise Science prior to medical school and then completed her residency training in Physical Medicine & Rehabilitation - a field in which physicians focus on getting patients of all abilities back to their desired level of function. She then completed a Sport Medicine fellowship to focus purely on her passion for treating athletes. Dr. Ingwerson's background has ranged from caring for athletes in elementary to high school and college ages in addition to athletes at ski resort clinics and professional athletes as well as multi-day endurance athletes in South America. Dr. Ingwerson enjoys seeing athletes of all ages, abilities and sport disciplines at UC Davis and Shriners Hospitals for Children. She has additional focus on the areas of ultrasound and injection procedures. Every athlete is welcome at UC Davis Sports Medicine. We look forward to helping you get back in the game!

Chetan Shawn Irwin welcomes LGBT patients.

**Philosophy of Care**

It is my goal to share my in-depth knowledge of the hand and upper extremity with you so that you can understand what is causing your symptoms and together we can make a plan that fits your needs.

I aim to provide each patient with the same, highest quality, care I would seek for my wife or mother. When necessary, I consult with my colleagues - experts around the country - to ensure the treatment we choose is the best possible option for you.

**Clinical Interests**

As a fellowship-trained hand, upper extremity and microvascular surgeon, Dr. Irwin specializes in complex reconstruction after trauma, microsurgery, congenital hand surgery as well as fractures and disorders of the arm and wrist.

In addition, he performs surgical reconstruction for defects of the head, neck, breast, trunk, arms and legs. Other areas of expertise include reconstruction after skin cancer removal, and general plastic and reconstructive surgery.

**Research/Academic Interests**

Dr. Irwin's research interests include:

- Flexor tendon repair with novel coupling devices
- Accessibility to and outcomes of hand trauma care
- Joint orthopedic and plastic surgery academic hand program development
- Mobile device-enabled perioperative care and communication
- Surgical resident education

Anita Jain, M.D.

Philosophy of Care
Dr. Jain prefers following children long-term, through all stages of development, and strives to create a “medical home” for her patients. Through regular well-child visits, she provides guidance before families face the stress caused by illness and injury.

Clinical Interests
Dr. Jain has clinical interests in developmental pediatrics, complex chronic conditions, obesity and weight management. She treats each child's condition in the context of his or her home and social environment and understands the importance of parents' involvement in the health of their children. Dr. Jain treats children and adolescents from birth to age 18 and enjoys general pediatrics as well as challenging medical problems.

Michelle A. James, M.D.

Clinical Interests
Dr. James is a pediatric hand and upper-extremity surgeon with special interests in congenital malformations, reconstruction of the upper extremity after spinal cord injury (tetraplegia), and reconstruction of the burned hand. She is conducting research on the functional outcomes of the treatment of brachial-plexus birth palsy, upper-extremity cerebral palsy and tetraplegia, in addition to researching the use of motion analysis in the upper extremity.

Philosophy of Care
I treat children with hand malformations, hand deformities from injuries, and problems with hand and arm function associated with neuromuscular conditions such as brachial plexus palsy, spinal cord injury and cerebral palsy. I focus on the child’s function and performance, especially from their own perspective. My greatest professional joy is hearing from a child or their parent that my intervention has improved their ability to accomplish a task that is important to them.

Yashar Javidan welcomes LGBT patients.

**Philosophy of Care**

As an adult and pediatric orthopaedic spine surgeon, I understand the challenges facing patients with spinal disorders. I treat each patient as an individual with unique needs and use a team approach to enable timely, effective diagnoses and treatments.

I believe in educating patients as much as possible about their condition and available treatment alternatives. My staff is dedicated to providing this information and answering questions, so you can take an active part in your own care decisions.

**Clinical Interests**

Dr. Javidan's interest in spinal deformity surgery started in residency at University of Southern California, Keck School of Medicine. He gained a tremendous volume of experience in spinal deformity surgery at University of California, Davis Spine Fellowship.

He currently practices at UC Davis and Shriners Hospital of Northern California. We treat severe spinal deformity more successfully today than ever before, but many questions remain regarding the best course of treatment. As faculty of the UC Davis Spine Center he looks forward to continued research and teaching of new orthopaedic surgeons here at UC Davis.

### Research/Academic Interests

As associate dean for research, Joseph leads the research program at the School of Nursing and develops and implements a strategic plan to further enhance the school's focus on Healthy Systems and Healthy People. She also supports research development through mentorship and collaboration, assures high-quality research infrastructure and support systems, and promotes robust and high-impact, interprofessional research.

Her most recent work is broadly focused on understanding and addressing pediatric health disparities and the related system barriers. Her research included the evaluation of programs to enhance parental and child mental health in Head Start, a randomized trial of interventions to improve behavioral risk factors for adverse pregnancy outcomes in African-American women, and studies of violence exposure.

As a generalist, Joseph has also participated in studies of pediatric brain injury, medication errors and improved asthma treatment.

Veeraparn Kanchananakhin welcomes LGBT patients.

Caring for children and our community is my passion, both professionally and personally. I am an active member of the American Academy of Pediatrics (AAP) and have been in pediatric practice for more than 10 years. Being a mother of two helps me have a better understanding of patients and parents' needs.

Being part of the excellent health care team at UC Davis Medical Group allows me to continue my efforts in building a healthy and safe environment for local families.

Outside of work, I love to spend time with my husband and two boys, hiking, biking, doing yoga and cooking.

Dr. K's clinical interests include: breast feeding, pediatric behavioral and development, and ADHD.

Christopher Hyunjoon Kim welcomes LGBT patients.

**Philosophy of Care**

There is no greater privilege than being entrusted to care for the health needs of your children. I believe that promoting children's health should take place beyond the walls of the doctor's office, and is a collaborative effort between physician, child, parents, caregivers, and the community. I strive to provide children and families with comprehensive and compassionate care that is evidence-based.

**Clinical Interests**

Dr. Kim is a general pediatrician who sees patients of all ages. His primary focus is preventive health and population health promotion through well child visits. He manages a wide variety of conditions including asthma, allergies, eczema, acne, and ADHD. He also performs sports participation physicals. Dr. Kim follows the CDC recommended immunization schedule.

**Research/Academic Interests**

Dr. Kim's research interests are in the health consequences of school absenteeism, and is investigating novel strategies to prevent school absenteeism due to chronic illness.

Eric Otto Klineberg, M.D., M.S.

Eric Otto Klineberg welcomes LGBT patients.

**Philosophy of Care**  
My philosophy is to care for each patient as I would like myself or a family member to be treated. I am committed to excellence in surgical care with an emphasis on communication, compassion, and empathy.

**Clinical Interests**  
Dr. Klineberg's clinical interests include all aspects of spinal degeneration, deformity, tumor and fracture. He has a particular interest in adult and pediatric spinal deformity surgery and cervical compression and deformity.

**Research/Academic Interests**  
Dr. Klineberg's research interests focus on enhancement of spinal fusion with stem cells and proteins. He is also actively involved in clinical research investigating spinal deformity and outcomes.

Nathan Kuppermann welcomes LGBT patients.

**Clinical Interests**
Nathan Kuppermann is a nationally recognized expert in pediatric emergency medicine. In addition to his clinical work, he has made outstanding research contributions, promoting global and national collaborations among leading pediatric emergency departments to advance the care of critically ill and injured children.

Kupperman holds the Bo Tomas Brofeldt Endowed Chair in the Department of Emergency Medicine at UC Davis. Kuppermann is an elected member of the National Academy of Medicine (NAM). He is the principal investigator of the Pediatric Emergency Care Applied Research Network (PECARN). He also chairs the executive committee of the global Pediatric Emergency Research Network (PERN).

**Research/Academic Interests**
Kuppermann’s research foci include laboratory and radiographic evaluation of pediatric trauma patients; pediatric diabetic ketoacidosis-associated cerebral edema; clinical and laboratory evaluation of febrile children; and knowledge translation, shared decision-making and cost-effectiveness of clinical prediction rules.

Satyan Lakshminrusimha welcomes LGBT patients.

**Philosophy of Care**

Dr. Lakshminrusimha’s philosophy of care is to provide every neonate, infant and child with evidence based, nurturing family entered care, enabling them to thrive and develop to their fullest potential; to invest in research that improves our understanding of human biology and leads to new discoveries that result in better outcomes for patients; to mentor the next generation of health care providers and researchers to achieve these goals.

**Clinical Interests**

Dr. Satyan Lakshminrusimha is a Neonatologist offering care to term and preterm newborn infants. He has special interest in disorders of neonatal transition such as persistent pulmonary hypertension of the newborn (PPHN). His research focus is on neonatal resuscitation and role of oxygen in regulating pulmonary vascular resistance.

**Research/Academic Interests**

Dr. Lakshminrusimha’s research focuses on neonatal resuscitation, oxygen and nitric oxide and their role in regulation of pulmonary vascular resistance and value and evidence based management.

Joel Allen Lerman, M.D.

Clinical Interests
Dr. Lerman's clinical interests include clubfoot, congenital lower extremity deficiencies, spina bifida, pediatric and adolescent spinal deformity as well as general pediatric orthopaedics. His research focuses on clinical outcomes in lower extremity deficiencies, orthotic management of spinal cord injured patients, and orthotic management of patients with clubfoot.

Philosophy of Care
I attempt to provide state of the art, high level, vigilant, safe care for pediatric and adolescent patients with orthopaedic conditions, accounting for present and future function. The child's needs are critical, and the child's and parent's assistance in care is enlisted.

I believe strongly in evidence based medicine, but also in tailoring the treatment plan to the individual patient and family. I value open communication and strive to make sure that families understand both the big picture and the details of the medical condition. A new medical diagnosis in a child is often a time of crisis for families; I recognize the stress that the diagnosis generates and will do my best to help ease fears. When a child has a particularly rare condition, I love seeking input from outside experts.

I have a longstanding interest in genetics, and have a particular interest in endocrine conditions in children with genetic conditions (including differences in sex development, pituitary hormone deficiencies and disorders of puberty). I also care for children with a wide range of other conditions, including type one diabetes, thyroid conditions, bone disorders and short stature.

Currently, I am active in research looking into how family functioning affects blood sugar control in children with type 1 diabetes. This is part of a larger effort -- our diabetes clinic as a whole is wholeheartedly committed to improving care for diabetic children. I am also active in pediatric resident educational efforts and medical student teaching.

Michael C. Lucien, M.D., M.P.H.

Philosophy of Care
I love working with children and helping families who wish to learn more about their health and adjust to constant developmental changes. I strive to perform friendly, efficient medical care in an encouraging and supportive environment. I consider a healthy environment essential to each patient's overall well-being. Positive role models, love and attention to each child's medical, social and emotional needs are also necessary. I am proud of the long-standing commitment of UC Davis to deliver care to all segments of the community, as well as its emphasis on patient education. In my practice I place emphasis on high-quality, general pediatric care, with the added ability to coordinate with all aspects of specialty care, when necessary.

Clinical Interests
Michael C. Lucien provides friendly, efficient medical care in an encouraging and supportive environment. He enjoys helping parents who wish to learn more about health and adjust to their child's constant developmental changes.

I was drawn to pediatrics by both its challenges and rewards. Pediatric patients, from newborn babies to near-adult adolescents, present a broad spectrum of medical conditions. Illness and disease place special burdens on children, and I am sensitive to each child’s individual discomforts and worries. I believe in the power of preventive health care. I not only treat existing problems, but also try to guide the children I see toward active lives and healthy habits. I value open communication and a supportive environment, and I encourage parents and caretakers to ask questions. In my view, I am in a partnership with families, helping their children grow into healthy adults. I am proud to be part of the UC Davis family, an institution with world-class facilities and a deep commitment to providing the best medical care to the people it serves.

T. Wade Maney emphasizes preventive care and works to guide children toward active lives and healthy habits. He especially values open communication with parents and caretakers.

Caring for seriously ill children and supporting families are my passion. I do all that I can to treat every ill child how I would want my own children cared for, and consider it a privilege and honor to be part of the incredible team at our Children’s Hospital.

Dr. James Marcin practices in the Pediatric Intensive Care Unit at the UC Davis Children’s Hospital. Dr. Marcin is in charge of the Pediatric Telemedicine Program, which provides telemedicine consultations to seriously ill pediatric patients in remote hospitals, emergency departments and inpatient wards.

Dr. James Marcin completed his pediatric critical care fellowship at the Children’s National Medical Center in Washington D.C. He also completed a masters degree in public health at the George Washington University.

Dr. Marcin conducts research on a variety of public health issues in pediatric emergency and critical care medicine, including quality of care, severity of illness measures and telemedicine.

Craig M. McDonald, M.D.

Clinical Interests
Craig McDonald, M.D. is an internationally recognized expert in the clinical management and rehabilitation of neuromuscular diseases including muscular dystrophies and the development of novel outcome measures for clinical trials. He also is widely known for his expertise in the management of children and young adults with spinal cord injury and spina bifida.

Research/Academic Interests
McDonald directs the NIDRR-funded Rehabilitation Research and Training Center in Neuromuscular Diseases and serves as principal investigator of the UC Davis NINDS-funded site in the NeuroNEXT Neurosciences Clinical Trials National Consortium. He is recipient of over $16 million in federal grant support over the past 12 years.

McDonald has been involved in a multitude of NIH, MDA, CDC and Shriners hospitals national committees and serves as a consultant to the pharmaceutical industry regarding clinical trials in Duchenne muscular dystrophy and other muscular dystrophies. He has served on many NIH study sections reviewing research proposals relating to neuromuscular diseases and rehabilitation sciences.

His research has focused on novel clinical endpoint development in neuromuscular diseases, clinical trials and natural history studies in muscular dystrophies, metabolic syndrome, and energy expenditure in childhood disabilities.

Theresa Murdock-Vlautin welcomes LGBT patients.

**Philosophy of Care**
As a physician; the role is to help provide the children with complex medical needs the best opportunity to achieve advance medical care, obtain exceptional pain and symptom management, as well as support and provide resources to the patient and their families with a comprehensive team of providers.

**Clinical Interests**
Dr. Murdock-Vlautin's interests are in pediatric critical care, pediatric palliative care and medical education.

**Research/Academic Interests**
Dr. Murdock-Vlautin's research interests are in advancing medical school education in regards to clinical skills teaching and assessment throughout the four year curriculum. In addition, bridging and advancing knowledge and resources in pediatric palliative care in Northern California.

Stephanie Tram-Anh Nguyen, M.A.S., M.D.

Stephanie Tram-Anh Nguyen welcomes LGBT patients.

**Clinical Interests**

My ultimate goal is to understand how and when hypertension should be treated to improve renal health of children at risk for significant renal and cardiovascular morbidity. My current research is focused on the role of hypertension in the development and progression of kidney disease in children with diabetes mellitus. Since diabetes and hypertension are the most common causes of cardiovascular and kidney disease among adults, hypertensive children with diabetes mellitus represents a vulnerable population at risk to develop substantial morbidity and mortality.

I am currently building a study cohort evaluating how often hypertension is missed in children with diabetes, what the prevalence of white coat hypertension is in children with diabetes, and what the cardiovascular consequences are of missed hypertension in children with diabetes. By concentrating on high risk children, I hope to identify the optimal management strategy for hypertension in children.

Tara Ann Niendam welcomes LGBT patients.

**Philosophy of Care**

Dr. Niendam supports all clients toward wellness and recovery, believing that managing symptoms is secondary to having meaningful roles, goals and relationships in one's life. She also believes that family and support persons are important for the recovery process and strives to include them in all aspects of assessment and treatment.

**Clinical Interests**

Dr. Niendam is a licensed clinical psychologist with specialized training in psychodiagnostic and cognitive assessment in youth at risk for or in the early stages of psychosis. As the Executive Director of the UCD Early Psychosis Programs, Dr. Niendam supervises clinic activities and staff and coordinates outreach and educational presentations within the community.

She also serves as the Co-Director for our HRSA funded pre-doctoral Trauma and Adolescent Mental Illness (TAMI) internship, which is a collaboration with the UC Davis CAARE Center to provide evidence-based trauma informed care to youth with early psychosis.

In her research, Dr. Niendam is interested in understanding how deficits in cognition can influence an individual's ability to maintain age-appropriate social and work/school functioning, as well as how the use of smartphones can improve clinical care for youth with psychosis.

**Research/Academic Interests**

Dr. Niendam's research has focused on four key themes: 1) understanding the cognitive correlates of serious mental illness, 2) linking cognition to brain circuitry, 3) elucidating how cognition and associated brain functioning contribute to real world functioning and clinical outcome across psychiatric and developmental disorders, and 4) evaluating the impact of interventions on outcomes in psychosis and disseminating best practices for early psychosis care.

She has explored these themes within and between multiple specific disorders, across dimensions of clinical symptomatology, and investigated how they can be impacted by intervention.

Taken together, she strives to understand how changes in the brain contribute to cognitive and clinical manifestations of psychiatric illness and lead to poor outcomes in clinical and psychosocial function.

Peter O'Malley, M.D.

**Philosophy of Care**

I chose pediatrics because I enjoy taking care of children and families. From birth through adolescence, young people possess an energy and optimism that can bring a smile to everyone’s face. I am honored to be able to be a part of that. My philosophy of care is to treat every patient as a unique individual and with respect. In doing so, I give each patient my whole and undivided attention. I am detailed and thorough in their medical care. To me, often little things—such as returning phone calls promptly, taking time to answer questions or explain lab results, and treating patients with kindness—matter most to families. I believe in staying current in the latest in pediatric medicine and technology in order to provide the best care for my patients. I believe that a loving family, development of wise eating and exercise habits, and a knowledge and respect of one’s own body are keys to lifelong good health.

**Clinical Interests**

Dr. O'Malley provides general pediatric care but also has interests including attention-deficit hyperactivity disorder (ADHD), asthma, and care of the child with complex medical needs such as infants who had been born prematurely or children with cerebral palsy. He is an instructor and affiliate faculty for Pediatric Advanced Life Support (PALS) and instructor for the Neonatal Resuscitation Program.

Arun Ranjan Panigrahi, M.D.

Arun Ranjan Panigrahi welcomes LGBT patients.

I believe that as physicians who care for children with chronic conditions as well as life-threatening illnesses such as cancer, we bear a distinct responsibility to provide evidence-based medicine with care, honesty and compassion.

I work every day with patients and families to discuss various diseases and their management, and work to partner with families during this difficult process to obtain the best possible outcomes.

Dr. Arun Panigrahi is a pediatric hematology-oncology physician offering care for children with various hematological conditions as well as malignant diseases. He has special clinical interest and expertise in bleeding and clotting disorders, hemoglobinopathies, anemias, leukemia and lymphoma.

Dr. Panigrahi's research focuses on various bleeding disorders, such as immune thrombocytopenic purpura (ITP), hemophilia, von Willberand disease and others. He has also published research focusing on the care of children with sickle cell disease, and has even worked to create protocols for the treatment of sickle cell disease with allogeneic bone marrow transplantation.

Dr. Panigrahi is also very much interested in medical education, and has been a director of a fellowship program. Finally, Dr. Panigrahi is also involved in a variety of international collaborations to provide care for underserved children.

**Philosophy of Care**

I believe that as physicians who care for children with chronic conditions as well as life-threatening illnesses such as cancer, we bear a distinct responsibility to provide evidence-based medicine with care, honesty and compassion.

I work every day with patients and families to discuss various diseases and their management, and work to partner with families during this difficult process to obtain the best possible outcomes.

**Clinical Interests**

Dr. Arun Panigrahi is a pediatric hematology-oncology physician offering care for children with various hematological conditions as well as malignant diseases. He has special clinical interest and expertise in bleeding and clotting disorders, hemoglobinopathies, anemias, leukemia and lymphoma.

Jeanny K. Park, M.D., is a board certified pediatric cardiologist who sub-specializes in cardiac electrophysiology. She treats pediatric patients of all ages, from newborns to adults with congenital heart disease, who have problems with abnormal or irregular heart rhythms. As the only pediatric cardiac electrophysiologist in the Sierra Sacramento region, she performs catheter ablations to eliminate certain fast heart rhythm problems and also implants pacemakers and defibrillators to treat patients at risk for sudden death secondary to heart rhythms that are either too slow or too fast.

Anjali Pawar welcomes LGBT patients.

**Clinical Interests**
Clinical Interests: I am a trained pediatric hematologist oncologist and that means I am a doctor who specializes in taking care of children with cancer and other blood related disorders including various anemias or bleeding and clotting disorders. I am involved in diagnosis, treatment and long term follow-up of my patients. 

Research Interests: Besides oncology and hematology, my area of interest is adolescents with bleeding disorders. I have worked with middle and high schools and am currently working on standardizing a simple pediatric questionnaire instrument that can assess the bleeding problems that require further work up. Another area of my interest is children with clotting problems. This issue is becoming more prevalent in the pediatric population with time. The use of invasive procedures and central lines is making a previously infrequent condition among children, thrombosis, to become more ubiquitous. Altered lifestyles that are more sedentary and obesity are causing problems like thrombosis in childhood that were relatively unknown before.

Philosophy of Care: Although the patient is one of the children in the family, the diagnosis and care of that child affects the whole family. It is very important for the child to have a warm and loving family. Healthy eating habits and lots of exercise go a long way in helping to beat cancer!

Rex M. Pillai, M.D.

Rex M. Pillai welcomes LGBT patients.

**Philosophy of Care**

Patients and their physicians turn to me to assist in the care of complex medical problems using the safe, minimally-invasive and innovative technologies the field of interventional radiology is built upon. I strive to provide individualized care to each of my patients based on the latest scientific evidence, practice experience from training at some of the nations' top institutions, and above all, their specific needs.

As an image-guided specialist, my patients are offered targeted, minimally-invasive, therapeutic options for diseases that have historically been untreatable or required extensive and morbid surgical operations.

**Clinical Interests**

Rex Pillai, M.D., an assistant clinical professor, is a minimally-invasive vascular and image-guided specialist performing diagnostic and interventional procedures for adult and pediatric patients. He has expertise in tumour-directed arterial therapy (chemo and radioembolization), tumor ablation and high-intensity focused ultrasound therapies focusing on liver, kidney and bone cancers. He treats female patients with symptomatic fibroids (uterine fibroid embolization) and pelvic congestion syndrome as well as male patients with varicoceles. His specialized clinical interests also include the treatment of vascular and lymphatic malformations, and pediatric percutaneous and endovascular image-guided interventions.

**Research/Academic Interests**

My research interests include application of high-intensity focused ultrasound in treating pediatric solid-organ tumors, novel treatments for vascular malformations, evaluating treatment methodologies and responses of hepatic tumours to radioembolization and biomedical device development.

Gary Raff welcomes LGBT patients.

**Philosophy of Care**

Caring for the present as well as the future. What we do today should be part of improving quality of life for years to come. This includes care beyond surgery and is multidisciplinary and multicultural. Since medical practice continually evolves and treatment options can change over time, we must consider this and stay up to date of current advancements in surgical and non surgical therapies in order to provide best care.

**Clinical Interests**

Dr. Raff is a Pediatric Cardiothoracic Surgeon with special interest in complex congenital heart disease and pulmonary hypertension. He also has expertise in congenital and acquired chest wall disorders. Dr. Raff’s research focus is in pulmonary hypertension and reduction of narcotic use after surgery.

**Research/Academic Interests**

Dr. Raff has been conducting research focused on pulmonary hypertension since he was a fellow at The Children’s Hospital of Philadelphia. He currently conducts clinical and basic science research in pulmonary hypertension treatments and models of pulmonary hypertension in the fetus. He is also interested in and has conducted research in novel ways to reduce narcotic use in patients after surgery.

Mitch Surabhan Ratanasen, M.D.

Mitch Surabhan Ratanasen welcomes LGBT patients.

Philosophy of Care

Pediatric medicine exemplifies the physician I aspire to be, blessing me with the opportunity to pursue my passion as a health provider, educator, and mentor for today's youth. It allows me to work with patients and their families where I can help guide them through all stages of growing up, from the challenges of newly found parenthood to educating young individuals on how to take responsibility of their health as they transition to adulthood.

I am passionate about providing a medical home for all of my patients and parents so that they can feel truly comforted and supported by a physician who is willing to listen to all of their concerns and help address their needs. I strongly believe in practicing preventive medicine and promoting overall wellness through patient-centered health care and incorporating shared decision making. I am forever grateful for the role models and mentors in my life who molded me into the person I am today, and I hope to have the same impact upon future generations as a dedicated and proud pediatrician.

Clinical Interests

Dr. Ratanasen is a general pediatrician involved in many aspects of healthcare at UCD. This includes working in faculty practice, resident clinic, and PEN (Pediatric Enteral Nutrition) clinic as well as spending time in the hospital in the nursery or on the pediatric wards. He is interested in providing a medical home for all of my patients and parents so that they can feel truly comforted and supported by a physician who is willing to listen to all of their concerns and help address their needs.

Research/Academic Interests

I enjoy spending time teaching pediatric residents in various settings, whether that be in the hospital on the wards and nursery or in our clinics at the Pediatric Glassrock Clinic, Wellspace Oak Park Clinic, Primary Care Center, or Sacramento Native American Health Clinic. I am passionate about promoting wellness and resiliency for all of my patients and co-workers.

Bibiana Restrepo, M.D.

Philosophy of Care
She believes in a family-centered medical care that includes the application of the highest standards of care and scientific knowledge while facilitating the child-family active and informed participation in a culturally sensitive and inclusive manner.

Clinical Interests
Dr. Restrepo is a developmental and behavioral pediatrician offering care for children with neurodevelopmental problems. She has a special interest in caring and improving the lives of children with autism spectrum disorder and their families.

Research/Academic Interests
Academically, she is very interested in early screening, diagnosis and management of neurodevelopmental problems with specific focus on the autism spectrum disorder. She is particularly passionate on strengthening the collaboration between community practitioners, therapy providers and autism diagnosticians; in addition to participating in teaching the new generation of clinicians and leaders in the field of neurodisabilities.

Dr. Restrepo research interests focus on improving the knowledge of different pathways of autism spectrum disorders and increasing understanding of early presentations of this condition in an interdisciplinary approach, while including underrepresented communities and promoting global collaborative efforts.

Patrick Scott Romano welcomes LGBT patients.

**Clinical Interests**
Dr. Romano practices primary care (outpatient) general internal medicine and general pediatrics in a team approach with physicians-in-training.

**Research/Academic Interests**
Dr. Romano's research and teaching interests focus on developing, testing, and validating health care quality measures, using outcomes data to improve the quality and effectiveness of health care, and studying the role of physicians and nurses in optimizing quality and safety across the health care industry.

Catherine Anne-Marie Rottkamp, M.D., Ph.D.

Catherine Anne-Marie Rottkamp welcomes LGBT patients.

Philosophy of Care
I believe that exceptional NICU care requires a team of dedicated professionals as well as involvement of and communication with parents. I strive everyday to maximize outcomes for our babies and to get them home with their families where they belong.

Research/Academic Interests
I am interested in neurodevelopmental biology. My PhD thesis and work as a post-doctoral fellow concentrated on how the developing nervous system establishes all of the cell populations required for it to function. As a neonatologist at UC Davis, I will focus on using this expertise to help improve developmental outcomes in sick and preterm neonates.

Noriko Satake, M.D.

Noriko Satake welcomes LGBT patients.

Clinical Interests
Dr. Satake's research focuses on the development of targeted therapies for pediatric cancers, with a special emphasis on leukemia and neuroblastoma. She is currently developing targeted therapies using nanoparticles, chemotherapeutic drugs, and siRNA, with leukemia-specific ligands and antibodies.
She has developed a human leukemia xenograft mouse model and used this model to evaluate markers for leukemia stem cells. Through a collaboration she initiated with a local company, she has also developed a mouse model of a rare pediatric cancer, which will be used to study this cancer and evaluate new therapies.

Her other research focus is translation of bioengineering technologies into clinical applications. She has established strong collaborations with bioengineers at the UC Davis Center for Biophotonics Science and Technology, particularly in the application of Raman spectroscopy in the clinic. In a previous collaboration, she studied leukemia cells in cerebrospinal fluid using Raman spectroscopy as an objective measurement of central nervous system leukemia. More recently, they have begun to focus on red blood cells.

Andrea Schneider, M.S., Ph.D.

Clinical Interests
From very early on in her academic career, Dr. Schneider focused on interdisciplinary research with brain-behavior interactions and acquired broad knowledge in clinical psychology and medical neuroscience, with specific training and expertise in ADHD, learning disabilities, and fragile X spectrum disorders.

Being also a clinical psychologist, her other area of interest is intervention research. She completed a pilot study of a phytopharmacological intervention (Ginkgo biloba) in dyslexia, and a study about the efficacy of neurofeedback in ADHD. Currently, Dr. Schneider's main research interest is the association between genetic and brain abnormalities underlying the neuropsychopathology, behavioral, and psychiatric symptoms in individuals with the fragile X mutations. Her focus on a number of psychophysiological indicators, like EEG/ERP measures in fragile X spectrum disorders and ASD, prepulse inhibition, eye tracking, and biofeedback.

Dr. Schneider is strongly committed to understanding, prevention, care, and cure of neurodevelopmental disorders.

David Schrimmer welcomes LGBT patients.

**Philosophy of Care**

My approach to patient care is that of a true partnership with you. I have the honor of acting as your guide through a process that is potentially frightening to you, but very familiar to me. I respect your input, desires and wishes, and help to support them in a way that is protective to both you and your unborn child (or children!). We share the mutual goal of a healthy outcome for all. While I am trained in the most sophisticated techniques, my hope for you is that I do as little as possible. A gentle nudge back to health is often better than the most complex procedure. Collectively, we try to do as little as possible, while never losing sight of our mutual goal of health. And, if things happen along the way, you can rest more easily knowing that you will be informed of every development, and will have the ultimate say in the path we take.

**Research/Academic Interests**

I have a special interest in multiple gestation pregnancies, having created and directed a multiple gestation program for more than 10 years. In addition, I am very interested in fetal therapy, including laser therapy for monochorionic twins which is part of our program here at UC Davis. Finally, I have a passion for teaching and advancing the science of medicine through research, which is why I practice here, at UC Davis.

Craig W. Senders, M.D.

Clinical Interests
Presently, 75% of Dr. Craig Senders' practice is pediatrics. This ranges from treatment of otitis media with effusion to airway disorders requiring complex reconstructive surgeries. Many of these pediatric patients have congenital anomalies of the head and neck, mostly consisting of cleft lip and cleft palate. Dr. Senders also has an interest in adults with airway and sinus problems which range from sinusitis to snoring, to patients with obstructive sleep apnea.

Dr. Senders is an expert in pediatric otolaryngology; cleft lip and cleft palate, endoscopic sinus surgery, and surgery for sleep apnea. Dr. Senders is the Director of the University of California, Davis Cleft and Craniofacial Program.

Research Focus
Dr. Senders' research has focused in two areas: The development and treatment of facial birth defects such as, cleft lip and cleft palate. The development and treatment of subglottic stenosis (narrowing of the airway at the voice box).

Dr. Shaikh welcomes LGBT patients.

**Philosophy of Care**

Dr. Shaikh’s philosophy of care is to serve as an advocate for children and to help families make evidence-based health care decisions for their children. She emphasizes preventive care and follows a holistic approach to health, assessing the needs of the whole child in addition to treating specific medical issues.

**Clinical Interests**

Dr. Ulfat Shaikh is the Director for Healthcare Quality at the University of California Davis School of Medicine and is a board-certified pediatrician at the UC Davis Children’s Hospital.

**Research/Academic Interests**

Dr. Shaikh’s expertise is in measuring performance in healthcare and supporting clinicians in designing, implementing and evaluating quality improvement initiatives. She has led training and coaching programs in health care quality improvement methods for public, private, and academic organizations.

Heather Siefkes welcomes LGBT patients.

**Philosophy of Care**
I believe there is no greater privilege than interfacing with children and helping them meet their potential. Caring for critically ill children and supporting their families is my passion and gives me the opportunity to help children meet their full potential. I am excited and honored to join the UC Davis Children's Hospital team.

**Clinical Interests**
Dr. Siefkes practices in the Pediatric Critical Care Unit at UC Davis Children's Hospital.

**Research/Academic Interests**
Dr. Siefkes enjoys teaching medical students, residents, nurses and other medical staff about pediatric critical care. She particularly enjoys using simulation as an educational tool. Her research interests include early detection of critical congenital heart disease in newborns and outcomes related to pediatric critical care medicine.

Rebecca A. Stark welcomes LGBT patients.

Philosophy of Care
Dr. Stark is dedicated to partnering with patients, parents, family members, and other healthcare providers to achieve the best possible outcome for children in her care.

Clinical Interests
Dr. Stark is a pediatric surgeon at UC Davis Children's Hospital and the adjoining Shriners Hospital for Children - Northern California, where she treats neonates, infants, children and adolescents with a wide range of conditions and congenital malformations. She is a COG member and has a specific interest in pediatric tumors. She also has an interest in neonatal surgery and congenital malformations.

Research/Academic Interests
Dr. Stark promotes surgical education through the UC Davis surgical residency program and is active in research protocols focused on congenital diaphragmatic hernias, appendicitis, pediatric tumors, and fetal interventions.

Rebecca Stein-Wexler welcomes LGBT patients.

I believe in providing the best possible quality of care to children in need of imaging. I try to image appropriately, employing principles of ALARA (using as little radiation as is needed) to answer clinical questions. My goal is also to make children and their family members comfortable in what can be a bewildering environment.

Medical student education and resident education are also tremendously important to me. The constant questioning and teaching that take place at an academic center often enhance clinical care. Furthermore, our ability to continue to provide high quality care ultimately depends on educating future generations of practitioners.

My commitment to education has led me to edit two major texts in pediatric radiology, one on orthopedic imaging, the other a general pediatric radiology casebook. With these texts, I hope to help educate many more people than I will ever encounter in person.

In addition to general pediatric radiology, I have a strong interest in international education outreach in radiology. For the past four years, I have helped educate radiology residents in a new residency in Haiti.

I have traveled there many times, often accompanied by UC Davis radiology residents, faculty, and alumni. I find this outreach to be tremendously rewarding and hope to inspire others to make global outreach part of their careers. I have taught in other countries as well, including Malawi and Rwanda.

Intussusception Reduction: I mentored a group of bioengineering undergraduate students at UCD, helping them develop a device that simulates reducing intussusceptions. Almost half of all radiology residents will not be involved with an intussusception reduction procedure during their residency. However, many will be expected to reduce intussusceptions upon graduation. We developed an educational device that enables residents to practice reducing intussusceptions on a doll—under the guidance of an instructor. The student sees actual fluoroscopic images from intussusception reductions projected on a computer screen whenever they tap a simulated fluoro switch while they pump air into the doll. I have also conducted surveys of resident and fellow exposure to intussusception reduction along with surveys of international intussusception reduction practices. I have also conducted research in the field of radiology dose reduction.

In addition, I have edited a major radiology text, Stein-Wexler R, Wootton-Gorges SL, Ozonoff MB. Pediatric Orthopedic Imaging. Springer publishers 2015 and am currently editing a resident-focused pediatric radiology review book, Top 3 Differential Diagnoses in Pediatric Radiology.

Jacob T. Stephenson, M.D.

Jacob T. Stephenson welcomes LGBT patients.

**Philosophy of Care**

Dr. Stephenson views his role as a pediatric surgeon as a distinct honor to engage with a family through what is often their most vulnerable time. He is glad to be a part of a team at UC Davis Children's Hospital that focuses on family-centered care throughout the continuum of surgical treatment.

**Clinical Interests**

Dr. Stephenson practices full-spectrum pediatric general & thoracic surgery, with an interest in minimally invasive approaches to surgical care. He is an active duty Air Force surgeon with skills in trauma care for children and young adults and has a special interest in providing care for underserved children in the California central valley and around the world.

**Research/Academic Interests**

Dr. Stephenson is actively involved in surgical education through the UC Davis surgical residency and through the PAACS organization which trains African surgeons at residency programs throughout Africa. Ongoing clinical research projects include improving colorectal care for children, trauma management, and building global health capacity.

Dennis M. Styne welcomes LGBT patients.

**Philosophy of Care**

I understand that complex endocrine conditions in a child may affect the whole family and I guide my care to include the family unit. As a result of this, I work alongside an excellent team of nurses, dietitians and social workers as the family proceeds through the evaluation and treatment process. I aim to only perform laboratory or radiographic tests when truly indicated so as to spare the child or teenager discomfort and expense. I see my patients on a consistent basis providing continuity of care.

Since I practice in our university system, the patient and family can be assured of having state of the art treatment the same as what can be provided at fine institutions across the world. Indeed our team develops new comprehensive methods of evaluation and treatment to benefit the patients and to teach other doctors how to provide such excellent care.

**Clinical Interests**

Dr. Styne cares for all types of pediatric endocrine patients and has written a text book on the subject. He is interested in obesity, growth disorders, disorders of puberty and of course, diabetes mellitus but accepts children and teenagers with any disorder of the endocrine system.

Dr. Styne is an expert in all areas of Pediatric Endocrinology and has written a textbook on the subject for providers around the world. He Is also a leader in the evaluation and treatment of childhood obesity and the complications that arise from it.

Dr. Styne is considered an authority on puberty, growth and obesity and has numerous publications in these areas and many others. He leads the International team that developed guidelines for the evaluation and treatment of childhood obesity. He has an avid interest in the effects of endocrine disrupting chemicals in the environment on the development of children.

Dr. Styne has performed research and published chapters and papers on many aspects of pediatric endocrinology. While his initial focus was on disorders of growth and puberty more recently he has turned his attention to childhood obesity and its effects. He is recognized as an outstanding teacher and is asked to give presentations across the country and internationally on topics of pediatric endocrinology.

**Research/Academic Interests**

Dr. Styne cares for all types of pediatric endocrine patients and has written a text book on the subject. He is interested in obesity, growth disorders, disorders of puberty and of course, diabetes mellitus but accepts children and teenagers with any disorder of the endocrine system.

Dr. Styne is an expert in all areas of Pediatric Endocrinology and has written a textbook on the subject for providers around the world. He Is also a leader in the evaluation and treatment of childhood obesity and the complications that arise from it.

Steven W. Thorpe welcomes LGBT patients.

**Philosophy of Care**

Dr. Thorpe strives to provide compassionate, evidence based care to all patients and their families. He works closely with a multidisciplinary team to provide expert coordinated care to patients with sarcoma and other tumors of the musculoskeletal system.

**Clinical Interests**

Dr. Thorpe is a fellowship trained musculoskeletal oncologist with expertise in bone and soft tissue sarcomas in both adult and pediatric patients. He specializes in limb sparing resections and reconstructions for bone and soft tissue sarcomas of the extremities. He also has expertise in the surgical management of metastatic bone tumors and benign bone and soft tissue tumors. Dr. Thorpe has particular interest in pediatric limb salvage procedures and surgical resections for malignant sarcoma of the pelvis.

**Research/Academic Interests**

Outcomes and innovations in limb sparing surgery for treatment of bone and soft tissue sarcoma. Outcomes and innovations in pelvic resections and reconstruction for sarcoma of the pelvis. Determination of role of cancer stem cells in the propagation and development of metastases and relapse in bone and soft tissue sarcoma.

Travis Tate Tollefson welcomes LGBT patients.

Clinical Interests
My clinical interests focus on rhinoplasty, facial aesthetic surgery facelift, brow lift, eyelid and minimally invasive endoscopic surgery, cleft lip and palate surgery, restoring facial deformities found at birth, after trauma, or after Moh’s skin cancer surgery, laser skin treatment, Botox™ and injectable fillers e.g., Restyblance for treatment of wrinkles.
I am honored to participate as a surgeon with surgical mission teams travelling to Ecuador and China for Operation of Hope formerly Operation Esperanza and Smile China in providing care for children with facial deformities such as cleft lip and palate.

Research Focus
Dr. Tollefson has an interest in studying facial deformities found at birth, such as cleft lip and palate, microtia absent ears, and craniolocystosis. He believes that translational research that links basic science discoveries to clinical use is very important. He has co-authored several articles and two textbook chapters on various topics in facial plastic and reconstructive surgery; including cleft lip and palate, nasal reconstruction, and facial implant materials. His current projects involve optimizing cleft lip and palate outcomes, improving classification of midfacial clefting, and using computer imaging software to study surgery on the chin. He is also involved in a clinical research project studying surgery for improving nasal breathing.

I love the issues, problems, diseases and challenges of pediatrics. I identify fundamental issues, see how everything interrelates and try to provide my patients with excellent care. I do what is best and correct for each child, with the understanding that illnesses and problems are a natural part of life. My office works together as a family, providing services, knowledge, skills and abilities. I strive to be accessible and to make my practice a model of pediatric care. In my view, common sense, good nutrition and understanding health facts are all important to good health, as is trust in one's doctor and good communication among patient, family and physician. My practice combines the power of the university and it state-of-the-art knowledge with a strong desire to help individuals and families with their health care needs. I am also dedicated to making managed care work for families.

Kevin A. Tracy is challenged by identifying the fundamental causes and interrelationships of disease. One of his goals is to make managed care work for families. He establishes a comfortable, family atmosphere for children while offering knowledge, skill and compassionate care. He encourages parents to develop a basic understanding of good nutrition and preventive care, and to exercise discipline with good common sense.

Vivien Narcisa Triano welcomes LGBT patients.

**Philosophy of Care**
Vivien Triano recognizes that genetic and genomic information is complex and the evaluation process can be daunting.
Her role is to help individuals and their families understand and evaluate their options and to facilitate individualized decisions based on their unique circumstances.
She strives to provide her patients with the support and resources they need to navigate the rapidly changing world of genomic medicine.

**Clinical Interests**
Vivien Triano is a licensed and board certified genetic counselor in the Division of Genomic Medicine. She works with pediatric and adult patients and their families who are at risk for or have a personal or family history of genetic or genomic disease.
She is currently building the Division's TeleGenomics program, aimed at providing genetic and genomic services through telemedicine technology to patients and their families who reside in locations where access to a clinical geneticist or genetic counselor is limited or unavailable.
She has an interest in the genetic and genomic factors contributing to autism spectrum and other neurodevelopmental disorders.

Caring for a premature or sick newborn requires a team of dedicated professionals. I love working with parents, nurses, pharmacists, respiratory therapists, dietitians, social workers, and specialists to provide the very best care for these fragile little guys.

Dr. Underwood's clinical activities are in the care of premature and sick newborn infants. His research interests include necrotizing enterocolitis, development of intestinal innate immunity, and mechanisms of probiotics and prebiotics in pre-term infants. Dr. Underwood's research projects include clinical trials of probiotics and prebiotics in premature infants, assessment of Paneth cell antimicrobial expression in infants with necrotizing enterocolitis and evaluation of Paneth cell expression in newborn rats.

Anthony Joseph Urquiza specializes in the medical evaluation, psychological assessment and treatment of abused and neglected children, and is Director of the CAARE Center. His extensive clinical experience includes individual and group therapy for children and adults, family and marital therapy, and parent training. His research addresses family violence, including treatment approaches for physically abusive families, sexually abused children, and survivors of childhood sexual abuse; and psychodiagnostic issues related to child mistreatment. He is also Director of the PCIT Training Center—a program whose mission is to disseminate parent-child interaction therapy to community mental health treatment programs around the world.

Cheryl W. Vance, M.D.

Cheryl W. Vance's specialty lies in the emergent care of pediatric, medical and trauma cases, including asthma, seizures, resuscitation, and blunt abdominal, cervical spine and head injuries. In addition to performing patient care, Vance teaches staff and medical students about pediatric emergencies. Her current research interests include CT evaluation of pediatric head trauma and cervical spine injuries. Her snow skiing and rock climbing activities and her knowledge of the risks they present allow her to personalize care for those suffering from traumatic situations.

Cheryl K. Walker, M.D.

Dr. Walker completed a fellowship in Reproductive Infectious Diseases and Immunology following her residency in Obstetrics & Gynecology. Her current research interests bridge epidemiology and basic science principles to study three areas: 1) the impact of the gestational environment on fetal risk for neurodevelopmental disorders such as autism, 2) the effect of gestational age and maternal physiology on extra-fetal hematopoietic and mesenchymal stem cell populations and, 3) costs and risks associated with early births, with the goal of using evidence-based principles to reduce avoidable early deliveries, including those resulting from elective induced labors and cesarean deliveries.

Dr. Walker is an investigator on a number of research projects at the Center for Children’s Environmental Health and the M.I.N.D. Institute here at UC Davis. Dr. Walker’s clinical interests are in general obstetrics & gynecology, infectious diseases, and family planning, and her practice is with the Department of Health and Human Services through Sacramento County.

Stephen Wedgwood, Ph.D.

Clinical Interests

Our research investigates the roles of elevated reactive oxygen species (ROS) in the development of pulmonary hypertension associated with neonatal diseases including persistent pulmonary hypertension of the newborn (PPHN) and bronchopulmonary dysplasia (BPD). By identifying the sources of ROS and the molecular signaling pathways they influence, we aim to develop better detection and treatment strategies for newborns with PPHN and BPD.

Jean A. Wiedeman, M.D., Ph.D.

Jean A. Wiedeman specializes in the treatment of children with infectious diseases, especially complex clinical cases or those with problematic diagnostic and management intricacies. She has extensive experience managing the care of children who are HIV-positive or have AIDS and serves as a consultant for the only CCS-approved pediatric infectious diseases and immunology center in northeastern California. Wiedeman's current research involves the study of chlamydia pneumoniae and the role it may play in atherosclerosis.

Jessica Caitlin Witkowski welcomes LGBT patients.

**Philosophy of Care**
As a Pediatric Hospitalist, I strive to provide family-centered, value-based care to all my patients. I hope to guide a family through the difficult time of hospitalization and, by using shared-decision making, work as a team toward the goals of care that are important to patients and their families.

**Clinical Interests**
As a pediatric hospitalist, my main clinical interest is providing value-based care to hospitalized children and families. By understanding the evidence and safely doing less, I hope to minimize unnecessary interventions while providing the optimal care to the patient.

**Research/Academic Interests**
My academic interest and research is in medical education and hope to empower my students to use research and evidence to provide high value care to their patients.

**Specialty**
Pediatrics

Granger B. Wong, D.M.D., M.D.

Clinical Interests
Dr. Wong's distinct perspective on managing congenital anomalies has allowed development of crossover techniques in aesthetic surgery. He applies virtual-reality computer software, endoscopic (minimally invasive) surgery, ultrasound and lasers to aesthetic body contouring and facial rejuvenation. His clinical practice includes aesthetic surgery, congenital craniofacial anomalies (including cleft lip and palate), pediatric plastic surgery, maxillofacial surgery and vascular anomalies. Dr. Wong's research interests are in distraction osteogenesis, resoluble biomaterials and minimally invasive surgical techniques.

Title

Jennifer H. Yang welcomes LGBT patients.

**Clinical Interests**

Dr. Yang specializes in providing urologic care for infants and children. Her practice involves the diagnosis and treatment of prenatal and congenital hydronephrosis, undescended testicles, hydroceles, hernias, neurogenic bladder, urinary infections and vesico-ureteral reflux. Dr. Yang’s expertise also includes complex genitourinary reconstructions including hypospadias repair and management of disorders of sex development.

Disorders affecting the brain and spine are often life-altering for patients and their families. Under these circumstances, selecting the optimal treatment strategy for a child is a complex decision process. As a neurosurgeon I strive to educate and empower parents to make these complex healthcare decisions so that they can best fulfill the needs of their child and family.

I specialize in pediatric neurosurgery with specific emphasis on the treatment of brain tumors, craniofacial disorders, epilepsy, spinal dysraphism, and traumatic brain injury. My research interests include studying the effects of injury to the developing brain and long term impact on neurological functioning. Current research projects include evaluation of the cognitive impact of radiation to the pediatric brain and amelioration of its effect by administration of oral selenium compounds. I am interested in the impact of moderate brain injury on the cognitive development of young children and teenagers. I am currently studying these effects in a pediatric brain injury model and am involved with the development of relevant injury models for the pediatric age group. Development of these models will allow us to better understand the pathophysiology of injury and develop more targeted future interventions.
