Nobuko Hagiwara, M.S., Ph.D.

Clinical Interests

Nobuko Hagiwara has expertise in the field of molecular genetics. She completed postdoctoral training at the University of Iowa in biological sciences and the University of California, Irvine, in anatomy and neurobiology. She also was a postdoctoral fellow at the Fox Chase Cancer Center Institute for Cancer Research in Philadelphia, PA, and the University of Arizona College of Medicine in Tucson. The Hagiwara lab studies development of the heart and skeletal muscle at the molecular and cellular levels. We are researching the Sox6 mutant heart to understand the progression of early stages of heart failure. A deficiency of the Sox6 transcription factor shows cardiac and skeletal muscle degeneration and arrhythmia. Another interesting phenotype is fiber type distortion in skeletal muscle. Since specialization of slow- and fast-twitch fiber type is crucial for physiological function of skeletal muscle, Sox6 should play an important role in normal fetal muscle development as well as in muscle degenerative diseases. To understand the role of Sox6 in skeletal muscle development, we are investigating downstream targets and cofactors of the Sox6 protein. To conduct our research, we utilize genetic, molecular and cellular biology techniques.

Title

Assistant Professor

Specialty

Cardiovascular Medicine, Internal Medicine

Department

Internal Medicine

Division

Cardiovascular Medicine

Center/Program Affiliation

Cardiovascular Services

Additional Phone

Physician Referrals: 800-4-UCDAVIS (800-482-3284)

Education

Ph.D., University of Tokyo, Tokyo, 1995
B.S., Ochanomizu Women's University, Tokyo, 1984
M.S., Ochanomizu Women's University, Tokyo, 1987

Professional Memberships

American Heart Association
Society for Developmental Biology
Society for Neuroscience

Honors and Awards

Japanese Ministry of Education Scholarship for graduate studies abroad., 1986
