Gregory Melcher, M.D.

Philosophy of Care I believe that one of the most important aspects of providing care is establishing a trusting

relationship with my patients. I believe in educating them about the disease process so that

together we can develop a treatment plan that makes sense and achieves their goals for improving

their health.

Clinical Interests I have broad interests in the breadth of adult infectious diseases, with expertise in the management

of HIV infection, systemic fungal infections, endocarditis, osteomyelitis and prosthetic joint infections. My research interests are in the area of conducting clinical trials of new antimicrobial

agents for bacterial and fungal infections, and for HIV infection.
