UC Davis Medical Group Directory
Your guide to primary and specialty health-care providers

Patient information and appointment assistance:
800-2-UCDAVIS
(800-282-3284)

Provider referral and transfer assistance:
800-4-UCDAVIS
(800-482-3284)

medicalgroup.ucdavis.edu
UC Davis Medical Group offers nationally renowned primary care and specialty expertise based at UC Davis Medical Center and multiple medical offices across the greater Sacramento region. Medical group physicians, nurse practitioners and clinical nurse specialists emphasize wellness and prevention, apply the latest knowledge to solve health problems and offer access to promising clinical trials, newly proven therapies and advanced technologies when needed.

FOR PATIENTS
Find a UC Davis physician, nurse practitioner or clinical nurse specialist
Consumer Resource Center: 800-2-UCDAVIS (800-282-3284)

- General information about available providers and services
- Assistance with appointments and referrals
- Information about accepted insurance plans

Established UC Davis patients can also use the MyChart web-based portal to communicate with their care teams, request certain appointments and refills, access medical records and more.

FOR HEALTH PROFESSIONALS
Outpatient referrals and provider phone consultations
UC Davis Physician Referral Center: 800-4-UCDAVIS (800-482-3284) Option #2 Monday | Friday, 8 a.m. to 5 p.m. Or online (non-urgent) requests via referrals.ucdavis.edu

- Information about availability of specialty services
- Coordination and status of referrals to specialty services
- Assistance for provider-to-provider phone consultations with specialists

Acute interfacility transfers and after-hours consultations
24/7 Transfer Center: 800-4-UCDAVIS (800-482-3284)

- Round-the-clock, R.N.-led coordination of acute interfacility transfers
- After-hours coordination of emergent provider-to-provider telephone consultations for complex or unusual cases
- Transfer requests evaluated based upon clinical urgency, availability of resources and other factors

Referring physicians can receive real-time access to test results and clinical information for their patients at UC Davis through the PhysicianConnect online electronic medical record.
Mehrdad Abedi, M.D.

Clinical Interests
Dr. Abedi's clinical interest is in the area of bone marrow transplantation and in the treatment of refractory/relapsed hematological malignancies. His basic science research interest is in the area of hematopoietic stem cells and novel models of bone marrow transplantation.

**Research/Academic Interests**  
Dr. Abu Aboud's research focuses on discovering novel diagnostic and therapeutic targets for solid tumors such as kidney cancer and for other hereditary kidney diseases such as polycystic kidney disease. He approaches these goals by utilizing omics approaches (metabolomics, proteomics and genomics) and developing animal models for these diseases. Dr. Abu Aboud is also interested in metabolic reprogramming in cancer to validate and use amino acids as molecular imaging agents for PET scanning.

Our laboratory studies the interface between the skeletal and immune systems, a newly emerging area of research called “osteoimmunology”. Haematopoietic stem cells in the bone marrow give rise to both T cells which are important in inflammation and osteoclasts that regulate bone resorption. Differentiation and activation of osteoclasts from their precursors is tightly regulated by cytokines and growth factors such as receptor activator of nuclear factor kappa beta (RANKL), tumor necrosis factor (TNF) and various interleukins. Receptor engagement of these molecules results in signaling cascades and transcriptional changes that give rise to medical conditions such as rheumatoid arthritis, osteoporosis and osteopetrosis. Using in vivo gene transfer of immune cytokines IL-23 and IL-17, we have established new arthritis animal models that highlight the importance of these immune cytokines in arthritis initiation and bone homeostasis. Using in vitro assays, we continue our attempts to define the cellular and molecular mechanisms that take place in this fascinating interplay of the immune and skeletal systems.

Dr. Aguilar-Gaxiola is an internationally renowned expert on mental health in ethnic populations. As on-site principal investigator of the Mexican American Prevalence and Services Survey, the largest mental health study conducted in the United States on Mexican Americans, he identified the most prevalent mental health disorders in the Mexican-origin population in California’s central valley; showed that the rate of disorders increases the longer an individual resides in the United States; and demonstrated that children of immigrants have even greater rates of mental disorders. From this study, he developed a model of service delivery that increased access to mental health services among the Central Valley’s low-income, underserved, rural populations. Dr. Aguilar-Gaxiola conducts cross-national epidemiologic studies on the patterns and correlates of psychiatric disorders in general population samples. He is the coordinator for Latin America and the Caribbean of the World Health Organization’s Mental Health Survey, and coordinates the work of the National Mental Health Institute surveys in Mexico, Columbia, Brazil, Peru, Costa Rica, and Portugal. He also develops culturally and linguistically sensitive diagnostic mental health measures, and translates mental health research into practical information for consumers and their families, health professionals, service administrators and policy makers.

Philosophy of Care

I believe in caring for patients and their families with respect, dignity and compassion. I focus on communicating effectively with my patients, being sensitive to their overall needs and concerns as well as their immediate medical problem. I keep my patients informed, answer their questions frankly, and involve them and their families in any decision-making process.

At UC Davis, my patients can benefit from the highest level of care achievable because of our state-of-the-art resources, knowledge, skills and technology. As a long-time resident of the Sacramento area, I have established good relationships with many health-care professionals, and I enjoy working with our community physicians and other hospitals, sharing knowledge and expertise to provide quality patient care.

Clinical Interests

Dr. Albertson is a leading expert in clinical pharmacology and toxicology, aero medicine, and septic and adult respiratory distress syndrome. In addition to his role at UC Davis, he is a flight surgeon and chief of pulmonary and critical care medicine for the Veteran's Administration Northern California Health Care System.

Research/Academic Interests

Dr. Albertson’s research and academic interests include: Sepsis, ARDS, Toxicology, and Clinical research in IPF.

I believe that one of the most important factors of successful care management is good communication, and that is why I make every effort to be a good listener. I provide my patients with all the information and tools they need to be active members in their own care. I also strongly believe in the importance of prevention and early intervention.

Dr. Al-Juburi's clinical interests include: gastrointestinal motility disorders, gastroparesis, esophageal diseases, celiac and celiac-like diseases, and general gastroenterology.

Gastroparesis and other gastrointestinal motility disorders, Gastroesophageal Reflux Disease (GERD) and Eosinophilic Esophagitis.

I find myself in the best of both worlds. I left private practice in order to join academic medicine. This has afforded me the opportunity to become a research fellow sponsored by the American Lung Association and the NIH, the director of the Medical/Surgical Intensive Care Unit, and director of the Invasive Procedures in the Pulmonary Services Laboratory at UC Davis Medical Center. I have the opportunity to treat complex diseases in critically ill patients using state-of-the-art technology and investigative measures that are available only in the academic setting. This year, as a transplant physician, I participated in our rapidly growing Lung Transplant Program. I am especially excited that now I can make this kind of practice available to the community.

Roblee Allen is an expert in advanced-stage lung disease and lung transplantation. His clinical interests include functionality of lung volume reduction surgery, effects of anti-rejection drugs following lung transplantation, chronic obstructive pulmonary disease, acute respiratory distress syndrome, and cystic fibrosis. His pulmonary expertise and skill in mountain climbing led to his selection as team physician for the 1993 K2 West Ridge and 1995 Makalu Himalayan Southeast Ridge expeditions. Dr. Allen's extensive research studies include effects of high-carbohydrate diet on acute mountain sickness and circulating cytokines, effects of therapeutic drugs on community-acquired pneumonia, cellular responses of bronchial and esophageal carcinomas to photodynamic therapy, treatments for gram-negative septic shock, and pharmacokinetics and iatrogenic drug toxicities in intensive-care units.

Dr. Asmuth’s philosophy of care is based on patient autonomy and providing a proactive approach to medical therapy. He seeks to provide information to the patient in a partnership that focuses on maintaining health and limiting the long-term consequences of chronic infections, especially HIV and HCV.

Dr. Asmuth has had over 25 years experience treating patients with general infectious diseases with a focused interest in HIV/AIDS and HIV/HCV coinfection. He also treats patients with HCV infection alone.

Dr. Asmuth has conducted approximately 100 clinical trials in the treatment of HIV/AIDS, HIV/HCV coinfection, and HCV monoinfection over the last twenty-five years of clinical research. He has a special interest in translational research trials that focus on HIV pathogenesis, immune reconstitution following initiation of anti-HIV medications, and the impact of HIV infection on mucosal immunity in the gastrointestinal tract. He has recently directed attention to host-microbiome interactions in HIV enteropathy and their effects on systemic immune activation. In addition, he has written and conducted clinical trials for the development of preventive and therapeutic vaccines for HIV, immune-based therapies, and is collaborating with researchers exploring the role of stem cell approaches for the treatment of HIV.

Mark Avdalovic, M.D.

Philosophy of Care

The core of high-level specialty care is effective communication with patients, their families and referring physicians. I pride myself on being an effective teacher and listener for my patients.

Clinical Interests

Dr. Avdalovic has general clinical interests in pulmonary and critical care, with a particular emphasis on interstitial lung disease and asthma. His research activities focus on the molecular aspects of lung wound repair.

Research/Academic Interests

Vascular growth factor expression by respiratory epithelium. Regenerative approaches to treating chronic lung disease COPD phenotyping.

Philosophy of Care
Patients are treated as family members. Patients must be thoroughly educated about their health and any investigations and treatments that are ordered for them.

Clinical Interests
I am a passionate believer in the saying that "Prevention is better than cure," and that if a treatment or cure is needed, then the more natural it is, the better. And hence the emphasis on what I call the three pillars of good health: Good exercise, Good nutrition and good sleep.

Gerhard Bauer is an assistant professor of hematology and oncology and director of the Good Manufacturing Practice (GMP) laboratory at the UC Davis Institute for Regenerative Cures. In addition to GMP design and construction expertise, Bauer also has extensive experience in the field of gene and cell therapy, having spent two decades developing novel clinical applications to improve medical outcomes for life-threatening illnesses. He also has investigated potential therapies for HIV, replacing the devastated immune system of an HIV-infected patient with cells that have been engineered to resist the virus. Bauer came to the UC Davis Health System in 2006 after designing and directing a state-of-the-art GMP laboratory at Washington University in St. Louis.

My research is in the field of nanoscience and specifically in exploring the interactions between inorganic nanomaterials and biomolecules. By taking advantage of synthetic chemistry, bioconjugation and other biomolecular tools I am attempting to create new bionanomaterials with advanced properties.

My goal is to develop new synthetic strategies for creating multi-functional nanoparticles and to gain a better understanding on how nanomaterials interact with biomolecules. The methods and knowledge acquired through this research will possibly lead to next-generation diagnostic tools and therapeutic approaches for cancer and other diseases.

Lorenzo Berti, Ph.D.

Amogh Bhat, M.D.

My approach to treating heart and vascular disease focuses on patient knowledge and empowerment. By involving the patient in his or her own care decisions and applying evidence-based best practices, together we can improve outcomes and well-being.

Dr. Bhat is an invasive, non-interventional cardiologist serving in a teaching role as Assistant Clinical Professor for medical students, residents, and fellows as they provide care to veterans at VA NCHCS in Mather, CA. He also provides direct inpatient and outpatient VA cardiology specialty care, and performs cardiovascular procedures as the Director of the VA NCHCS cardiac catheterization laboratory.

Dr. Bhat’s teaching interests include training medical students, residents, and fellows basic and advanced cardiovascular care, critical care, imaging (including echocardiography, nuclear, and coronary CT imaging), and procedures (including TEE, cardioversion, coronary angiography).

William J. Bommer, M.D.

Clinical Interests
William J. Bommer's clinical interests focus on sonography (thoracic esophageal and gastric imaging) and intraluminal echocardiography. Dr. Bommer is evaluating risk factors for preclinical disease, morbidity and mortality in patients 65 or older. Projects involve computer simulation of blood-flow models in finite difference analysis, restenosis prevention with time-release oligonucleotide site-specific delivery, bronchial airway circulation, and new contract agents. He is the director of the California Off-Site PCI Program.

Christopher L. Bowlus, M.D.

**Philosophy of Care**
Technology has led to tremendous improvements in the care of patients, but the physician's greatest tool remains the ability to listen.

**Clinical Interests**
Christopher L. Bowlus specializes in autoimmune liver diseases, specifically primary biliary cirrhosis, primary sclerosing cholangitis, and autoimmune hepatitis. He also cares for patients with hepatitis B.

**Research/Academic Interests**
Dr. Bowlus is interested in elucidating the underlying genetic and immunologic causes of autoimmune liver diseases and using this information to develop more effective treatments for these conditions.

                          Caledonian Society at John Muir College
                          Sigma Sigma Phi
                          Society of Critical Care Medicine

Honors and Awards: Winner, American College of Physicians National Poster Competition, Orlando FL, 2014
                   Third Place Winner, American College of Physicians Regional Oral Presentation Competition, Salem OR, 2013
                   Magna Cum Laude University of California at San Diego, 2007

Harold Burger, M.D., Ph.D.

Philosophy of Care
Respect for patients

Research/Academic Interests
Dr. Burger’s research interests include: HIV research, in particular HIV tropism and other determinants of HIV pathogenesis and disease progression.

Technology Transfer
Six Patents on:
The patented technologies are licensed to Quest Diagnostics and serve as the basis for its clinical test, "HIV-1 Coreceptor Tropism Assay."
Patents and licenses are owned by Health Research Inc.

Kevin James Burnham, M.D.

**Philosophy of Care**
I want to improve the health and quality of life of my patients through a comprehensive treatment approach, emphasizing diet, exercise, and other non-drug therapies. I strive to practice medicine based on the best-available medical evidence, but individualize a treatment plan for each patient.

**Clinical Interests**
Dr. Burnham is clinically active in internal medicine primary care and primary care sports medicine. He is a team physician for local high school and collegiate athletics programs. His clinical interests include adult primary care, office-based primary care procedures, diagnosis and management of musculoskeletal injuries and conditions, and sports ultrasound.

**Research/Academic Interests**
Dr. Burnham has additional interests in resident and medical student education.

Enkhmaa Byambaa, M.A.S., M.D., Ph.D.

Clinical Interests

Dr. Byambaa's research interest is focused on risk factors for cardiovascular diseases (CVD), including metabolic syndrome, genetics and lipid and lipoprotein metabolism in various ethnic/racial groups. A major interest has been to identify factors that impact on Lipoprotein(a), Lp (a), a genetically regulated cardiovascular risk factor. Her current research projects: to test the suitability of rhesus monkey as a model system for studies on Lp(a), to assess the roles of inflammation, endocrine dysregulation, HIV disease activity and antiretroviral therapy in modulating Lp(a) levels and associated atherogenic properties, and to identify genetic determinants of Lp(a) levels in humans.

Dr. Chen has had a passion for understanding and improving the treatment of neoplastic diseases. She has established close collaborations with physician scientists to discover novel useful biomarkers that stratify clinicopathological subtypes of solid tumors. These biomarkers will be used to predict treatment outcomes of cancer patients undergoing clinical trials with combined inhibitors specifically targeting aberrant oncogenic signaling.

Dr. Chen's research strives to elucidate the molecular mechanisms underlying human diseases and thereby identify useful biomarkers and druggable targets in a broad range of malignancies. In the last five years, her studies have revealed multiple oncogenic complexes and have also developed the peptide-based therapeutics to mitigate cancer metastasis and drug resistance. Currently, the research foci of Dr. Chen's laboratory are 1) to discover potential therapeutic targets in renal cell carcinoma and polycystic kidney disease using integrated -omics data, genetic manipulations and pharmacological approaches; 2) to develop clinically viable methods of ex-vivo expansion and activation of tumor propagating cells. In addition, Dr. Chen is actively engaging in the feasibility of PIP2 retention strategies on controlling cancer progression and increasing the efficacy of chemo- or immunotherapy.

Jennifer Chen, M.D.

Philosophy of Care

I chose a career in primary care because I value forming long-term relationships with patients (and their families), as well as getting the opportunity to be the initial point of contact for my patients' care. My main area of interest is preventive health, including how regular exercise and a healthy diet can significantly improve overall well-being. I believe in patient-centered care and shared decision making and look forward to working with you to develop a joint medical plan for any health issues that may arise. Because of this belief, I strongly encourage patients to bring family members and loved ones with them to participate in their care as I find this achieves the best results.

Moon S. Chen, Jr., Ph.D., M.P.H. is a nationally renowned expert in cancer health disparities, particularly as they affect Asian-American populations. He is UC Davis Comprehensive Cancer Center's Associate Director for Cancer Control, leading a portfolio of research that addresses determinants of cancer risk and their mitigation in human populations. Determinants include access to care, behaviors (e.g., tobacco use, screening, etc.), socio-cultural factors, and the interactions of individuals with their environment and the health-care system.

Additionally, Chen oversees shared resources for cancer epidemiology, which includes leveraging the California Cancer Registry, the world's largest registry of cancer data in a single geographical entity with the richest diversity of data on cancer in diverse racial/ethnic populations. Chen also oversees shared resources for the cancer biorepository, an increasingly important source of biospecimens for investigating cancer causes. He serves as a liaison with the California Department of Public Health, Kaiser Permanente Division of Health, and other external agencies.

Yung-Wei Chi, D.O.

Clinical Interests
Dr. Chi is a nationally recognized expert in vascular medicine with clinical expertise on venous, arterial and lymphatic disorders. A prolific author and researcher, he has presented his research works and lectured at major national and international conferences. His research comprises all aspects of vascular medicine, focusing on vascular ultrasound imaging, anti-thrombotic therapy, cellular based/angiogenesis therapy for peripheral arterial disease, and venous diseases and interventions. As part of the first group of board-certified phlebologists in the U.S., Dr. Chi is a regional expert in catheter-based endovenous treatment of venous disorders.

Andrew I. Chin, M.D.

Clinical Interests
Dr. Chin is interested in the care of those with kidney diseases. This includes individuals with chronic kidney disease, inflammatory kidney conditions, as well as adults on long-term dialysis. He also devotes much of his time to the education and training of residents and fellows.

Research/Academic Interests
Dr. Chin's research focuses on clinical aspects of dialysis, including vascular access and dialysis treatment adequacy, as well as the progression of chronic kidney disease.

May Cho, M.D.

**Philosophy of Care**

Dr. Cho is an adult medical oncologist who specializes in medical treatment of gastrointestinal malignancies including esophageal, gastric, pancreatic, hepatobiliary, and colorectal cancers. She is a strong advocate for providing patients with comprehensive care such as mutational profiling, regional therapies, clinical trials and supportive care.

**Clinical Interests**

Dr. Cho is an adult medical oncologist who specializes in medical treatment of gastrointestinal malignancies including esophageal, gastric, pancreatic, hepatobiliary, and colorectal cancers. For Gastrointestinal Oncology Clinical Trials at UC Davis Comprehensive Cancer Center, click here.

**Research/Academic Interests**

Dr Cho is interested in conducting clinical trials for these malignancies and has a particular interest in novel treatments for colorectal cancer including molecular targeted therapies, immunotherapies and liver directed therapies.

**Philosophy of Care**
With a background in integrative medicine, I always aim to take a patient-centered and holistic approach in my patient care. This involves getting to know my patients as individuals, with a goal of forming a partnership through honest and open communication. This partnership allows us to work together to make informed and joint decisions for your health and well being.

**Clinical Interests**
Dr. Christiansen is an internal medicine primary care provider who works with a wide variety of patients and broad range of diseases. She provides comprehensive care with an emphasis on prevention through positive lifestyle changes. She has a passion for teaching and remains involved as a clinical educator through the UC Davis Internal Medicine Residency, helping her remain current on cutting edge research and evidence based medicine.

I chose my specialty because I had an interest in microbiology. Most of the new and challenging syndromes are connected with infectious diseases. Humor and compassion are the methods I use in my practice. I try to personalize patient care to the needs of each patient. In my view, appropriate immunizations and the patient's educational knowledge about his or her condition are most important for good health. In addition, at UC Davis, we have a vital facility that generates new knowledge and the specialists necessary to handle the most complex cases.

Stuart H. Cohen specializes in clinical infectious diseases and infection control in the hospital environment. He is interested in AIDS, HIV infection and treatment of immunocompromised patients and serves as primary infectious diseases consultant to transplant programs. Cohen uses molecular biology to investigate epidemiology of resistant microorganisms. His laboratory-based studies look at susceptibility testing of HIV clinical isolates to multiple antiretroviral agents. Additional research focuses on new antimicrobial agents and chemokine and cytokine level changes.

Felicia A. Corbett, M.A., M.S.

I enjoy getting to know the patient's entire history, including social history in order to educate them about self care and a treatment plan they can agree with. I feel like I make a difference when I see patient's successfully staying out of the hospital for heart failure exacerbations. I enjoy working in this ever evolving field of medicine to treat patient's who have this chronic disease.

Felicia Corbett, PA-C works collaboratively with the director and physicians of the Advanced Heart Failure Service. Involved with the Ventricular Assist Device Program, supports the inpatient Heart Failure Service with consults and case management. She is involved with evolution of several programs/devices that are used to treat or prevent heart failure exacerbations and assists with clinical trials. Works closely with a team to identify new heart failure admissions, educate patients and assists with transitions to self care and outpatient appointments. She enjoys treating the whole patient and developing a care plan for self management.

Felicia Corbett PA-C is a preceptor for the Betty Irene Physician Assistant/Nurse Practitioner Program. She educates nurses and staff about heart failure care and about several of the related programs at UCD Health.

Philosophy of Care
In working with patients, I use a careful and efficient application of scientific knowledge to the artful practice of pulmonary medicine. I strongly believe that UC Davis makes a special contribution to the Sacramento-area community through the heartfelt concern of medical students, house staff and faculty for the health and welfare of the patients it serves.

Clinical Interests
Dr. Cross serves as co-director of UC Davis' Adult Cystic Fibrosis Clinic and also has a special interest in alpha-antitrypsin deficiency (congenital emphysema). He has produced over 200 publications on topics related to inhalation toxicology, with a focus on oxidants including ozone, oxides of nitrogen and cigarette smoke, and antioxidant micronutrients. He also has published on several aspects of clinical lung disease.

**Philosophy of Care**
Coinciding with the mission of the Department of Internal Medicine, my goal is to provide excellence in clinical care, research and education, and to deliver high-quality medical care with commitment to cutting-edge research and superior physician training.

**Clinical Interests**
My clinical interests focus on kidney and kidney-pancreas transplantation and Nephrology. My research focuses on seeking a better understanding of cardiovascular disease in individuals with chronic kidney disease and approaches to early detection and intervention. I am also interested in renal transplantation access, outcomes research, and recurrence of renal disease after transplantation.

I became a doctor specializing in internal medicine because I enjoy helping people and managing a range of complex medical problems. I try to provide care in a compassionate way and treat my patients the way I would want my own family to be treated. As a primary care physician, I look forward to forming long term relationships with patients based on trust and mutual respect. I believe balance of both body and mind is essential to good health, as are healthful eating, stress reduction, and exercise.
Dr. Eiserich's research interests are focused on chronic and acute inflammation, most specifically on the cellular and biochemical mechanisms underlying endothelial cell dysfunction commonly associated with inflammatory disorders of the vasculature. He has broad lecturing and teaching experience and has presented at national and international society meetings. He now is working on investigatory grants from the American Heart Association and National Institutes of Health. Dr. Eiserich has published extensively in the area of free radical metabolism and pathophysiology of lung inflammation, and his work has been cited hundreds of times in prestigious journals, including the Journal of Biological Chemistry, Archives of Biochemistry and Biophysics and Nature. He also is a member of the scientific advisory board for Biochemical Journal. As a researcher, Dr. Eiserich does not see patients.

Dr. Erdembileg's research interest is focused on risk factors for cardiovascular diseases, including metabolic syndrome, inflammation, genetics and lipid and lipoprotein metabolism in various ethnic/racial groups. Many of the results to date have focused on the characterization of a high-risk phenotype and have aimed to analyze synergistic, contributory effects of metabolic, genetic and inflammatory risk factors in promoting cardiovascular disease. I have specifically pursued models illustrating an association of genotypes with cardiovascular disease phenotypes.

**Philosophy of Care** To assist individuals to identify and harness internal motivation to make positive health behavior changes that are consistent with their personal values and goals. Patients are viewed as collaborative partners in their care and services are delivered in a manner that respects personal interests, autonomy, and choice.

**Clinical Interests** Clinical services are focused on assisting patients to engage in and maintain positive health behaviors, in order to prevent and/or manage single or multiple health issues.

Faith Thayer Fitzgerald, M.D.

**Philosophy of Care**
I decided to become an internist because of the diagnostic and therapeutic challenges of complex disease. I also enjoy having the opportunity to talk with and listen to men and women from all different walks of life. My philosophy of care centers on applying rigorous thought and the knowledge of both medicine and the human experience to making people both feel better and fulfill their full potential. Frankly, a lot of "good health" is good luck?economic, social and genetic. I like helping the unlucky.

**Clinical Interests**
Faith T. Fitzgerald is recognized for her superb diagnostic, patient care and teaching skills. In 1991, the American College of Physicians conferred upon her the prestigious title of "Master Physician." In 1992, she was honored by the California Medical Association with a Golden Apple lifetime academic achievement award.

Dr. Gandara’s research interests focus on developmental therapeutics of new anti-cancer agents as well as preclinical modeling and clinical research in lung cancer. He is the principal investigator on an Early Therapeutics award from the National Cancer Institute (NCI), where he leads an interdisciplinary team of clinical oncologists, pharmacologists, molecular biologists and statisticians in developing new anti-cancer agents in a variety of novel drug classes. He also leads a multi-specialty team in the Southwest Oncology Group (SWOG), an NCI-funded national clinical research organization, in studies related to improving therapies for lung cancer and developing predictive biomarkers of therapeutic efficacy. Dr. Gandara is also the UC Davis principal investigator for a multi-institutional collaboration (iGXT: integrated Genetically-engineered mouse models, patient-derived Xenografts, and Clinical Trials) between the NCI Center for Advanced Preclinical Research (CAPR) and Jackson Laboratory, an NCI-designated basic cancer center. The goal of this iGXT project is to develop better preclinical models to optimize cancer drug development and speed the transition to personalized cancer therapy.

© 2018 UC Regents
I love the practice of internal medicine. I firmly believe that health care is a partnership—a "therapeutic alliance" between patient and physician. As a result, my ability to provide medical care depends critically on a patient's respect for and active participation in this relationship. I am proud to be a member of an organization like UC Davis, which heals with a passion and delivers on its promise to teach both patients and health care professionals.

Minority health care issues, particularly in relation to Hispanic and Latino populations, are of high priority for Jorge A. Garcia. Garcia's research interests include the quality of health care delivery for underserved persons from diverse backgrounds, Hispanic and Latino health care issues, and cultural competency in medical education.

Dr. Haczku is a respiratory immunologist with a research focus on the pathogenesis of allergy, asthma, COPD and pulmonary infections. She has developed in vivo (animal) and in vitro models to investigate disease mechanisms. She is interested in studying the effects of environmental exposures such as air pollution, cigarette smoking and psychosocial stress on airway inflammation.

**Research/Academic Interests**

- **Title**: Professor of Medicine
- **Specialty**: Allergology, Immunology, Respiratory pathology and physiology
- **Division**: Pulmonary, Critical Care, and Sleep Medicine
- **Languages**: Hungarian
- **Education**: M.D., University Medical School of Debrecen, Debrecen Hungary 1986
  Ph.D., Immunology, Imperial College, London UK 1997
- **Internships**: Internal Medicine, University Medical School of Debrecen, Debrecen Hungary 1986
- **Residency**: Internal and Pulmonary Medicine, University Medical School of Debrecen, Debrecen Hungary 1986-1990
- **Fellowships**: Postdoctoral Fellowship-Allergy and Clinical Immunology, National Jewish Medical and Research Center, Denver CO 1995-1998
- **Honors and Awards**: Nominee for Membership, Collegium Internacionale Allergologicum, 2015
  Fellow of the AAAAI, American Academy of Asthma, Allergy and Immunology, 2008
  Career Investigator Award (Rank: top 9.6%), American Lung Association, 2008
  University of Pennsylvania Research Foundation Award, University of Pennsylvania, 2003
  Research Award, American Lung Association, 2003
  Parker B. Francis Pulmonary Research Fellowship Award, Francis Families Foundation, 2000
  MRC (Canada) Fellowship Award (ranked 3 of 170), Medical Research Council of Canada, 1999
  Fellowship Award, International Life Sciences Institute, 1997
  Pharmacia Allergy Foundation Fellowship, Pharmacia Allergy Foundation, 1997
  First Prize Von Pirquet Award, American College of Asthma, Allergy and Immunology, 1996

Nobuko Hagiwara, M.S., Ph.D.

Clinical Interests
Nobuko Hagiwara has expertise in the field of molecular genetics. She completed postdoctoral training at the University of Iowa in biological sciences and the University of California, Irvine, in anatomy and neurobiology. She also was a postdoctoral fellow at the Fox Chase Cancer Center Institute for Cancer Research in Philadelphia, PA, and the University of Arizona College of Medicine in Tucson. The Hagiwara lab studies development of the heart and skeletal muscle at the molecular and cellular levels. We are researching the Sox6 mutant heart to understand the progression of early stages of heart failure. A deficiency of the Sox6 transcription factor shows cardiac and skeletal muscle degeneration and arrhythmia. Another interesting phenotype is fiber type distortion in skeletal muscle. Since specialization of slow- and fast-twitch fiber type is crucial for physiological function of skeletal muscle, Sox6 should play an important role in normal fetal muscle development as well as in muscle degenerative diseases. To understand the role of Sox6 in skeletal muscle development, we are investigating downstream targets and cofactors of the Sox6 protein. To conduct our research, we utilize genetic, molecular and cellular biology techniques.

Dr. Hallett has clinical interests in immunologic and allergic diseases, including rhinitis, asthma, sinusitis, urticaria, angioedema, anaphylaxis, hypersensitivity pneumonitis, atopic dermatitis and allergic gastrointestinal disorders.

Dr. Hallett also treats patients who have comparable clinical problems without an apparent allergic cause, including vasomotor rhinitis, nonallergic asthma, primary immunodeficiency and adverse drug reaction.

Her research activities include identification of common aeroallergens associated with asthma, allergic rhinitis in the Sacramento Valley, and the association of tension or migraine headaches presenting as allergic rhinitis and sinusitis.

Dr. Harper specializes in the diagnosis and management of patients with diffuse parenchymal lung diseases. In collaboration with the UC Davis Interstitial Lung Disease Specialty clinic, he predominantly sees patients with sarcoidosis, idiopathic pulmonary fibrosis, and connective-tissue disease-related interstitial lung disease. He also provides expertise in cardiopulmonary exercise testing as a means to diagnose patients with unexplained shortness of breath, or to better assess response to therapy.

Dr. Harper's research includes the study of important signaling molecules regulating mucosal innate immunity and allergic responses. This includes the study of mechanisms that are critical for neutrophil recruitment in the airway epithelium.

Xiaosong He holds a doctorate in molecular biology. He has extensive experience in developing recombinant vaccines based on different vector systems and evaluating immune responses after vaccination. His recent research, which has focused on human T cell immunity against viral pathogens (in particular, hepatitis C virus), is important for the design of preventive and therapeutic vaccines for viruses that cause persistent infections. He also has considerable experience training, advising and supervising medical students and graduates on research projects and thesis work. As a researcher, he does not see patients.

Mechanisms of cellular response to oxidative stress, drug and carcinogen metabolism, pharmacokinetics assay development, mass spectrometry, HPLC. Dr. Henderson is pursuing the development of advanced diagnostics with the goal of predicting patient response to cancer drugs prior to initiation of toxic chemotherapy. The diagnostics development is enabled by accelerator mass spectrometry (AMS), an ultrasensitive technology for detecting rare isotopes such as radiocarbon and tritium in biological samples. AMS is also useful for measuring pharmacokinetics of small drug doses in humans, which Dr. Henderson is applying to drug development and drug formulation studies. Another project involves the incorporation of hydrophobic drugs and membrane proteins into nanoparticles made of apolipoproteins and phospholipids called nanolipoprotein particles (NLPs). NLPs closely mimic the cellular membrane bilayer, and render hydrophobic molecules water soluble. Dr. Henderson is using NLPs for drug delivery and protein biochemistry studies that are related to breast cancer research.

Calvin H. Hirsch, M.D.

I specialized in geriatrics because of the challenge of clinical diagnosis and management, along with a desire to improve the quality of care for elderly patients. My principal focus of care and research is the optimization of functional status and the prevention of functional decline. The diagnosis and management of dementia constitutes a second area of emphasis. In treating frail elderly people and those with cognitive impairment, I view the patient and caregiver as single inextricable unit. For elderly patients, a program of regular exercise to prevent a decline in mobility and balance and to reduce the risk of dependency is very important. Care should be coordinated by a primary-care physician to minimize inappropriate treatment and testing. UC Davis also can help through its extraordinary expertise and cutting-edge medical practice in a variety of disciplines.

Calvin H. Hirsch's special clinical interests include Alzheimer's disease and the clinical implications of normal aging. He chairs the Committee on Extreme Care, Humane Options (ECHO), a four-county, community-wide project to involve the public in health-care decisions and promote discussion of treatment preferences. His research interests include the correlates, preservation and optimization of physical functioning in the elderly; diagnosis and management of dementia; psychiatric and physical health effects of caregiving; and enhancing communication within the physician-caregiver-older patient triad. He also is studying the impact of arthritis-specific disability on home care and nursing home use, and the efficacy of resistance and band exercises for improving and maintaining strength and balance in community-dwelling frail elderly persons.

Philosophy of Care
I believe physician and patient work together in partnership towards greater health and wellbeing for the patient. I provide common-sense, evidence-based education and treatment plans for each of my patients, while simultaneously seeking to understand each patient as an individual.

Clinical Interests
Dr. Hood-Medland is a general internal medicine physician offering primary care for adult patients. Her additional roles as clinical research fellow and medical student / resident educator keep her up-to-date on evidence based medicine.

Research/Academic Interests
Dr. Hood-Medland's research interests include systems-based care, community medicine, and primary care based mental health and addiction services. Dr. Hood-Medland's other academic interests include clinical staff wellbeing, underserved medicine, and medical education.

Yihung Huang, M.D.

Philosophy of Care
Dr Huang is committed to clear, straightforward communication to help patients understand their medical issues and partnering with them to deliver effective medical care.

Clinical Interests
Dr Huang's clinical interests include kidney transplantation in highly sensitized recipients, promotion of living donor kidney transplantation and kidney paired donation, and treatment of chronic active antibody mediated rejection.

Research/Academic Interests
Dr Huang's research interests include protocol biopsies following kidney transplantation and cost-effective surveillance strategy following kidney transplantation.

Kendra Hutchinson, M.D.

**Philosophy of Care**
I believe that exceptional care requires an interdisciplinary approach combining the efforts of medical oncologists, surgeons, and radiation oncologists. I teach my patients about their disease so that we can make decisions about their care that best matches their goals.

**Clinical Interests**
My clinical practice is focused on breast cancer, therefore, I am able to offer clinical trials to my patients.

We are here to come alongside patients as they continue their cancer treatments. Whether you are just starting your treatment journey, or have been on this road for some time, we can offer you an extra team to support you during this time.

**Philosophy of Care**

Dr. Iglowitz is board-certified in Family Medicine, and previously worked as a Hospitalist before completing her fellowship in Hospice and Palliative Medicine through UC Davis. She currently serves as the physician-lead for the Palliative Care Clinic at the UC Davis Comprehensive Cancer Center. In addition, she attends on the inpatient Palliative Medicine consult service at the UC Davis Medical Center. Through a holistic approach, she and her team address physical, emotional, and spiritual symptoms as well as advanced care planning to walk with patients through intense illness.

It is not uncommon for me to be asked, "What does an endocrinologist do?" I often find myself answering this question with examples of the common diseases that I treat - diabetes, thyroid disorders, adrenal abnormalities, pituitary problems, bone diseases, cholesterol problems, etc. But the study of endocrinology is more complex than that.

In general, the endocrinologist strives to understand the complex ways in which the different glands and organs of the body communicate with one another to maintain the structure, function, nutrition and health of the whole body. Hormones are the means by which many of these glands and tissues communicate with one another. Yet these hormones often have many effects throughout the whole body. Therefore, as an endocrinologist I may be asked to help evaluate and manage a specific endocrine problem, but I must always look at the specific problem in the context of the whole person. And that is my favorite part of being an endocrinologist.

I believe in caring for people, not just diseases. And I believe that each person has been created in such a way that they are very much like everyone else, yet also completely unique in many ways. Therefore, when I see you as a patient, I always try to listen carefully and perform a thorough physical examination. I then evaluate and help manage your condition based on the most current, scientifically-based evidence available, and then individualize the plan of care to meet your specific needs.

All of this will be done in coordination with your primary care provider to ensure the best care possible. And when necessary, we have the privilege of utilizing the expertise of some of the brightest minds in medicine and the cutting-edge resources available to us as part of the UC Davis Health System.

**Philosophy of Care**

When treating PCOS patients, there are several important points to consider: First, early and correct diagnosis is crucial. Ordering the appropriate tests requires experience and expertise. Second, PCOS is a life-long condition and the patient's goals change with time. Thus, the doctor's treatment plan needs to change to fit these goals. Third, PCOS treatment is a team work, including not only the patient and the doctor but also the dietitian and the pharmacist. Finally, this journey takes compassion, patience and persistence.

I truly enjoy taking care of PCOS patients. In the past, these women did not receive medical attention until they desired pregnancy. Fortunately, this has changed. We now start taking care of women with PCOS in their early teens. I feel privileged to help these young, otherwise healthy women in my clinical practice and with my research.

Dr. Karakas's clinical practice is dedicated to the care of women with polycystic ovary syndrome (PCOS). This is a complex disease characterized by endocrine and metabolic disorders. The endocrine aspects of PCOS involve irregular periods, infertility, and excess hair in the face and body. Metabolic aspects include obesity, insulin resistance, and predisposition to diabetes and lipid disorders. It is important to recognize that endocrine and metabolic aspects of PCOS interact with each other. For example, weight loss and treatment of insulin resistance regulate menstrual periods and increase fertility.

Dr. Karakas's research focuses on the effects of diet and nutritional supplements on obesity, insulin resistance, lipid disorders, inflammation and reproductive abnormalities associated with PCOS. She is especially interested in the effects of different proteins and fatty acids. She has conducted numerous nutrition intervention studies and clinical translational research funded by the National Institutes of Health and non-profit research foundations.

Pouria Kashkouli, M.D., M.S.

**Philosophy of Care**
Dr. Kashkouli's philosophy of care is to provide high quality and compassionate care to the whole person by collaborating with the health care team to promote healing and restoration of quality of life.

**Clinical Interests**
Dr. Kashkouli's clinical interests include Palliative Care and Hospice, Education and Mentoring, Bioethics (end-of-life and resource allocation), and Public Service.

Theresa Keegan, Ph.D., M.S.

Research/Academic Interests
Dr. Keegan is a cancer epidemiologist with primary research interests in studies of cancer surveillance, cancer outcomes and cancer survivorship. She has worked extensively with population-based cancer registry data to understand patterns of cancer incidence, treatment and survival, and been involved with multiple studies examining patient experiences with cancer and patient-reported outcomes after cancer diagnosis.

Title
Associate Professor

Specialty
Cancer Epidemiology, Cancer Survivorship

Division
Hematology and Oncology

Center/Program Affiliation
UC Davis Comprehensive Cancer Center

Additional Phone
Phone: 916-734-3772
Fax: 916-734-7946

Education
M.S., Wellness Management, Ball State University, Muncie IN 1999
Ph.D., Epidemiology, Stanford University School of Medicine, Stanford CA 2003
B.S., Physiology, UC Davis, Davis CA 1996

Professional Memberships
American Association for Cancer Research (AACR)
American Society for Preventive Oncology (ASPO)

Honors and Awards
National Institutes of Health Predoctoral Traineeship in Epidemiology, 1999

Karen Kelly, M.D.

**Clinical Interests**
Dr. Kelly is an internationally recognized lung cancer expert dedicated to providing enhanced cancer care through cutting-edge clinical trials. Dr. Kelly’s lung cancer research spans the spectrum of the disease from prevention to treatment. She has been at the forefront of clinical trials development evaluating drugs to treat lung cancer and novel compounds to prevent lung cancer. She is also involved in developing biomarkers for screening and early detection of lung cancer. Dr. Kelly has authored or co-authored more than 190 publications, including original papers, reviews and book chapters. She frequently lectures on lung cancer topics, nationally and internationally. Dr. Kelly is a long-standing active member of ASCO, SWOG and the IASLC.

Clinical Interests
Dr. Kenyon's clinical interests focus on asthma, non-invasive markers of airway disease, chronic obstructive pulmonary disease (COPD) and sepsis.

Research/Academic Interests
My research interests are in airways diseases and critical care medicine. As a physician-scientist and Co-Director of the UC Davis Asthma Network (UCAN) clinics with a research interest in adult severe asthma, my laboratory staff and I are working to develop the next medications to improve the care of all patients with asthma.

My emphasis in asthma therapeutics focuses on the role of nitric oxide in airway inflammation. I was the recipient of an NIH career development award to study the effects of nitric oxide in models of airway inflammation and this work translated into an FDA new drug application to study L-arginine in adult severe asthma.

I presently have NIH funding to perform a Phase II clinical trial of L-arginine supplementation in asthma. In addition, I have collaborations with other UC Davis investigators to run intervention trials in asthma and to test novel asthma drugs in animal models. With colleagues in the College of Engineering, we are developing breath sensor technologies that will be handheld and phone-based to improve care for patients with asthma.

My training and translational research has depended heavily on the UC Davis Clinical and Translational Science Center and I am grateful for their efforts. To help train the next generation of physician-scientists and clinical fellows, I serve the Director of the CTSC Pre-doctoral Training Program and Associate Director of our NIH Training Program in pulmonary medicine and the Center of Comparative Respiratory Biology and Medicine.

Edward Kim, M.D., Ph.D.

Clinical Interests
Dr. Kim is an adult medical oncologist who specializes in medical treatment of gastrointestinal malignancies including pancreatic, hepatocellular, biliary, esophageal, gastric, and colorectal cancers.
He has expertise in conducting clinical trials for these malignancies and has a particular interest in novel treatments for pancreatic cancer.
For Gastrointestinal Oncology Clinical Trials at UC Davis Comprehensive Cancer Center, click here.

Research/Academic Interests
Dr. Kim's research includes developing and conducting clinical trials for gastrointestinal malignancies. He has a particular interest in translational and clinical research for pancreatic cancer.
His laboratory research is focused in 2 primary areas: 1) investigation and development of novel rational combinations of drugs for pancreatic cancer, and 2) development of patient-derived models of pancreatic cancer (including patient-derived xenografts and patient-derived organoids) to enhance pre-clinical evaluation of promising new therapeutics for pancreatic cancer.

Dr. Anne A. Knowlton specializes in cardiology, with particular interests in atrial fibrillation and heart failure. She graduated from Harvard University magna cum laude with a degree in biology. After earning her medical degree from Yale University and doing her internship and residency training at Boston City Hospital, Dr. Knowlton completed a cardiology fellowship at Boston University Medical Center. She was honored with a National Research Award as a postdoctoral fellow at the Cardiovascular Institute at Boston University School of Medicine from 1984 to 1986.

Dr. Knowlton has research interests in heat shock protein, apoptosis, heart failure, estrogen and aging. She has written numerous papers and several book chapters on topics related to cardiovascular medicine and serves on the editorial board of the Journal of Heart Disease and Open Autoimmunity.

Synopsis: The research in our laboratory focuses in 4 areas related to the protective properties of heat shock proteins (HSPs), and a developing area of research on aging, estrogen and mechanisms of cardiovascular disease. These four areas of research are:

1) Mechanisms underlying the protective properties of HSP72 in the cell, with particular focus of localization of HSP72 to the nucleus with stress.

2) Role of HSP60 in apoptosis and heart failure; we are interested in whether HSPs in heart failure paradoxically have a detrimental effect on the heart mediated by the immune system and an inflammatory response.

3) Estrogen and the HSPs - regulation of expression of HSPs by estrogen in cardiac myocytes and endothelial cells.

4) Estrogen, aging and the cardiovascular system.

We are interested in the interaction of aging and estrogen loss on the expression of HSP72 in the heart, and what impact this has on the response to ischemia. We use simulated ischemia of isolated cardiac myocytes, endothelial cell culture and failing hearts as models in our work. We are particularly interested in protein localization and post-translational modification, and the effect of disease on this.

In studying particular aspects of HSP function we use various molecular methods including yeast-2-hybrid, site-directed mutagenesis and overexpression systems to study the effects of these changes. Our overall goal is to better understand cardiovascular injury in order to develop better treatments.

Richard Louis Kravitz, M.D., M.S.P.H.

Richard Kravitz is Professor and Co-vice Chair for Research, Department of Internal Medicine, University of California, Davis. As a clinician, he believes that careful history taking, judicious use of diagnostic studies, and clear communication are the fundamentals of good medical care. His primary research interests include patients as agents for quality, the causes and consequences of physician behavior, and improving care for mental health conditions in primary care settings. Over the past 25 years, Dr. Kravitz has examined patients' expectations for care, how physicians respond to patients' requests for services, and how direct-to-consumer advertising of prescription drugs influences physician decision making in depression. He recently completed a project evaluating targeted and tailored messaging to enhance care seeking for depression in general medical practices, and he is currently researching a phone app that helps patients with chronic pain design their own personalized clinical trials.

The winner of the 2013 George Engel Award for Outstanding Research Contributing to the Theory, Practice and Teaching of Effective Health Care Communication and Related Skills, Dr. Kravitz currently serves as Co-Editor-in-Chief of the Journal of General Internal Medicine. A Fellow of the American College of Physicians and Academy Health, he is a graduate of Stanford University and UC San Francisco School of Medicine. He completed additional clinical and research training at UCLA, where he served on faculty until his 1993 arrival at UC Davis.

Richard Louis Kravitz, M.D., M.S.P.H.

© 2018 UC Regents
Disease is difficult to cope with, but often ambiguity of the diagnosis is even harder to deal with, as the prognosis and treatment plan are not evident. I thoroughly review patient medical records and listen to the patient's history to devise a clear, thoughtful diagnostic and therapeutic plan. Most importantly, I educate my patients about my proposed plan so that together we can make a diagnosis and optimize treatment.

Dr. Kuhn is a pulmonology and critical care (i.e. intensive care) specialist. He has special interest in the care of patients with chronic obstructive pulmonary disease (COPD), alpha-1 anti-trypsin deficiency, and patients receiving mechanical ventilation.

As Co-Director of the UC Davis Alpha-1 Anti-Trypsin Deficiency Clinic, Dr. Kuhn strives to increase community awareness of this non-so-rare disease to improve identification, education, and treatment of alpha-1 anti-trypsin deficiency patients.

Dr. Kuhn's research interest is in the management of patients with acute exacerbations of COPD including: early identification of exacerbation using new technologies; management and prognostication of patients ill enough to require mechanical ventilation; and preventative measures to prevent re-admission after discharge. Dr. Kuhn uses cutting-edge health informatics approaches and new technologies to improve the management of COPD patients in the modern health care environment.

Dr. Lam is an expert in combinatorial chemistry, chemical biology, drug development, molecular imaging, nanotherapeutics and medical oncology. His laboratory is engaged in the development and application of combinatorial library methods for basic research and drug discovery. In addition to cancer drug development, he is also interested in signal transduction, antibiotics development, molecular immunology, chemical microarray, and proteomics.

Dr. Lam is both a practicing medical oncologist and a laboratory investigator. He is acclaimed for his pioneering role in the field of combinatorial chemistry and developing the novel one-bead-one-compound technology, which rapidly screens millions of chemicals at one time to identify those that bind to diseased cells. The tool is advancing the early detection and precise delivery of treatments for brain, breast, prostate, pancreatic, lymphoma and other cancers. In addition, it is advancing the discovery of imaging agents that produce highly detailed molecular profiles of diseases for improved diagnosis and tracking medication effectiveness.

His development and applications of combinatorial chemistry and other chemical methods look to solve many biomedical problems. Dr. Lam invented the "one-bead-one-compound" (OBOC) combinatorial library method, filed the patents and published the technique in Nature in 1991. This represents one of the first few reports in the new field of combinatorial chemistry at the time. Since then, the field of combinatorial chemistry has rapidly evolved into a new chemistry discipline, and has become an indispensable tool in drug development and chemical research. The OBOC combinatorial library approach is unique and truly an ultra-high throughput method, as thousands to millions of chemical compounds (peptides, peptidomimetics, small molecules, and macrocyclic natural product like molecules) can be efficiently synthesized and screened in parallel in a relatively short time.

In addition to expanding the use of one-bead-one-compound technology, Dr. Lam's research also includes developing a blood test for ovarian-cancer detection, utilizing nanoparticle carriers for drug delivery and synthesizing cancer-fighting molecules with less-toxic side effects. He is currently collaborating on projects to identify the molecular pathogenesis of and treatments for primary biliary cirrhosis, osteoporosis and Alzheimer's disease.

Clinical Interests

Nancy E. Lane, MD is an Endowed Professor of Medicine, Rheumatology, and Aging Research, Director for the Center for Musculoskeletal Health, Director of the K12 NIH Building Interdisciplinary Research Careers in Women’s Health (BIRCWH), and Principal Investigator of the NIH funded Program on Sex Differences in Musculoskeletal Diseases Across the Lifespan at the University of California at Davis School of Medicine where she has served for the past 8 years. Dr. Lane is an internationally recognized scientist in the fields of both osteoporosis and osteoarthritis. Her translational research team has been instrumental in defining the role of glucocorticoids in bone fragility including their effects on cell stress and vulnerable cell populations including osteocytes. As a faculty member at the University of California at San Francisco, she pioneered a seminal clinical trial to demonstrate that daily injections of the hormone PTH could reverse glucocorticoid induced osteoporosis. After transitioning to U.C. Davis, she developed a novel compound to direct stem cells to the bone to grow new bone and treat osteoporosis. In addition she has uncovered novel genetic variations that predispose individuals to osteoarthritis and has studied novel treatments for osteoarthritis. She organized and directs an NIH funded junior faculty grant writing workshop that has taught over 300 junior faculty in musculoskeletal medicine grant writing skills that has resulted in a 45% success rate in applicants receiving research grants (2006-present).

Dr. Lane has been recognized by the University, her medical residents, subspecialty fellows, and by her faculty peers as an outstanding mentor with the UC Davis Dean’s Award for Scientific Mentoring (2008). Her research accomplishments have been recognized by the UC Davis School of Medicine Dean’s Team Science Award (2012), the American College of Rheumatology for the Oscar Gluck Memorial Lecture for outstanding work in Osteoporosis (2011), the Remodeling in Bone “RIB Award” by the International Society of Bone and Mineral Research (2012), her election as a Master of the American College of Physicians (2012) and David Trentham Lectureship and Women in Medicine Lectureship at Harvard Medical School (2013). She is also recipient of the Bone and Joint Decade Outstanding Achievement Award for developing a mentoring program in grant writing (2009).

Dr. Lane was President of the Board of the United States Bone and Joint Decade (2006-2008), co-led the International Bone and Joint Decade Conference in Washington DC (2010), was elected and serves on the council of the American Society of Bone and Mineral Research (2010-2013), and the Orthopedic Research Society.
Dr. Lane is on the editorial boards of Nature Reviews Rheumatology, Rheumatology (Associate Editor), Seminars in Arthritis and Rheumatism (Associate Editor), Co-editor Arthritis and Rheumatism (2005-2010), and Journal of Rheumatology. She was elected to the Association of American Physicians (2006) and the National Academy of Sciences Institute of Medicine (2013), has been named Best Doctors in America annually since 2004, and continues to have an active rheumatology practice.

Primo Nery Lara, Jr., M.D.

Clinical Interests

Dr. Lara is a clinician-scientist whose principal research interests are in the field of developmental therapeutics, particularly in genitourinary and thoracic malignancies, as well as in cancer biomarker development. He has a national and international reputation in clinical-translational research, and has chaired or co-chaired many cancer clinical trials from phase I to III. He directs an active clinical practice in genitourinary and thoracic malignancies and is a strong advocate for cancer clinical trials.

Research/Academic Interests

Dr. Lara has received research funding from the National Institutes for Health/National Cancer Institute (including R01 and R21 awards) and the American Cancer Society, among others. He has authored or co-authored nearly 200 peer-reviewed manuscripts, most notably on novel or emerging anti-neoplastic strategies. He is currently principal investigator of the NCI-funded K12 Paul Calabresi Clinical Oncology Training Grant, the NCI-funded N01 Early Therapeutics Award, and the UC Davis ACS Institutional Research Grant. He also serves as an active co-investigator in several NCI-funded drug development awards at UC Davis.

Dr. Lara is active in medical education and training, having served as chair of the American Society of Clinical Oncology's Continuing Medical Education Subcommittee in 2012-2013 and Education Committee chair of the International Association for the Study of Lung Cancer from 2011-2013. He has chaired SWOG's Advanced Kidney Cancer Organ Site since 2002, and serves as chair of SWOG's Professional Review Committee.

Lawrence J. Laslett specializes in general cardiology, providing both short- and long-term cardiac care. His practice focuses on acute-care cardiac problems, (particularly coronary disease), including diagnostic catheterization, coronary angioplasty and stent placement. Laslett’s research involves the effects of angiographic contrast on left ventricular function and dynamic resistance exercise on myocardial oxygen supply and demand. He is also assessing post-thrombosis coronary anatomy, potential myocardial injury from high-intensity endurance running, and the impact of serologic infarct markers on prognosis for *rule out* MI patients.

Joseph W. Leung, M.D.

**Philosophy of Care**
To provide the best care for my patient through clinical service, education and development of new (and improved) treatment.

**Clinical Interests**
Dr. Joseph Leung specializes in all types of gastroenterological conditions. He is one of the leading biliary endoscopists in the United States and well-recognized in Asia for his work on biliary stents and stones.

He pioneered several therapeutic endoscopy techniques including injection hemostasis, urgent nasobiliary drainage and stenting for patients with acute cholangitis.

His research interests focus on design of biliary stents, bacterial biofilm and biliary infection and methods to prevent of biliary sludge and stones formation.

His other clinical and research interests are in colorectal cancer screening using the novel water method. He is interested in teaching endoscopy especially in the use of simulation practice to improve trainees’ clinical ERCP skills.

**Research/Academic Interests**
Patients with pancreaticobiliary diseases

Teaching novice endoscopists the basic technique of ERCP and biliary intervention.

Dr. Li has been involved in several translational research projects since her fellowship training, leading to the publication of several original research papers. Areas of her current studies are in optimizing anti-epidermal growth receptor (EGFR) therapy in non-small cell lung cancer and combining charge farnesyl transferase inhibitor tipifarnib with cytotoxic and hormonal agents in breast cancer. She has served as principle investigator of several investigator-initiated studies in breast cancer and lung cancer. As a physician-scientist, her main research focus is on understanding the mechanisms of action of novel targeted agents and developing rational therapeutic strategies for breast and lung cancer.

Javier Lopez, M.D.

Clinical Interests

Javier E. Lopez is interested in studying how soluble factors may regulate the transition of cardiac myocytes from regeneration during fetal growth to hypertrophic growth postnatally. It is postulated that the lack of cardiac regeneration in the postnatal heart confounds the myocyte dysfunction, cell death and tissue fibrosis that is associated with decompensated heart failure. Our global hypothesis is that by manipulating the cardiac gene program of the failing heart with soluble factors (drugs), we may augment endogenous and/or transplanted cardiac myocyte regeneration to ameliorate the progression of left and/or right ventricular failure. My laboratory focus is in studying the fundamental mechanisms of this growth transition to enhance the translational efficacy of soluble factors (drugs) and cell-based strategies (stem-cells) for cardiac regeneration in the failing heart.

I believe in caring for the whole patient and family not just their medical illness. I aspire to empathic, honest and open communication with patients and families.

Dr. MacMillan is a general internist whose focus of care is on the hospitalized adult patient. In addition, he is board certified in hospice and palliative medicine and has special interest in working with adult patients and families dealing with life limiting medical illness.

Title: Clinical Professor
Medical Director, UC Davis Medical Center Palliative Care Program
Medical Director, UC Davis Hospice Program

Specialty: Internal Medicine, Hospice and Palliative Medicine
Department: Internal Medicine
Division: Pulmonary, Critical Care, and Sleep Medicine

Address/Phone: UC Davis Medical Center, 2315 Stockton Blvd. Sacramento, CA 95817
Phone: 800-2-UCDAVIS (800-282-3284)

Dr. Mangat and her staff welcome you and value the trust you place in us to take care of all your endocrine and diabetes related health needs. She believes in building a strong relationship with every patient based on mutual respect and open communication. We hope that every treatment plan results from collaboration between an informed and educated patient and a knowledgeable healthcare provider.

Each patient requires a varied amount of physical, emotional, psychological, social and spiritual support. We believe that each patient has basic needs, rights, privileges and preferences, which must be respected regardless of race, color, age, sex, creed, national origin, economic status or physical disability.

Dr Mangat provides expert care for diabetes, thyroid disease, metabolic disorders, changes in hormone production and more. We combine professional expertise with leading edge technology to deliver compassionate care and improve the lives of people with these conditions.

Dr. Mangat is a board certified endocrinologist offering specialized care for adults with various endocrinology conditions such as Diabetes, Thyroid and Adrenal disorders. She has special interest in managing Diabetes and its associated complications.

Archana Maniar, M.D.

**Philosophy of Care**
In a time of ever-increasing use of technology in healthcare, infectious diseases requires more than diagnostic testing and procedures. The practice of Infectious Diseases requires detailed discussions with patients and time spent understanding the course of their disease processes.

**Clinical Interests**
Dr. Maniar's clinical work includes the spectrum of infectious diseases from HIV and hepatitis C to infections in travelers and hospital-acquired infections. She sees patients in the ambulatory care and inpatient settings.

**Research/Academic Interests**
In addition to her clinical role, Dr. Maniar is head of Infection Control at VA Northern California Healthcare System. She participates in antimicrobial stewardship program to encourage the appropriate use of antibacterials.

Clinical Interests

Dr. Margolis has extensive research and public policy experience and expertise related to the health impacts of climate change and environmental factors, most notably heat and air pollution, on vulnerable populations, especially children and older adults. Her 20 years experience as a California state scientist and program lead, and academic training in epidemiology (PhD), immunology (MA), and marine sciences (oceanography)/biology (B.A.) gives her a unique knowledge-base and perspective on issues related to climate change. Her ARRA Challenge Grant (?Projected Heat Wave Magnitudes and Public Health Impacts?; NIEHS) is advancing understanding of heat-related illness and morbidity that occurs even under relatively mild conditions across California. Dr. Margolis? research interests include: Public health impacts of climate change and variability, including clinical ramifications and interventions to reduce vulnerability; pathophysiology/mechanisms and influence of environmental factors on natural history of chronic diseases (respiratory, cardiovascular, metabolic, immunologic); pediatric asthma and lung function growth; gene-environment interactions; exposure assessment; and translation of research findings into integrated public health and environmental policies. A particular interest is development of multiple-determinant models of chronic disease and related health outcomes that incorporate individual- and community-level factors and assess vulnerability across the life-span. She is committed to addressing issues of ethics in environmental health research, social inequities in health and environmental policy and access to healthcare.

Gregory A. Maynard, M.D., M.S., M.H.M.

Philosophy of Care
I strive to provide compassionate and professional care in the inpatient setting, along with other members of the healthcare team, partnering with the patient and their family.

Clinical Interests
Dr. Maynard's clinical interests are in quality improvement and safety of healthcare systems.

Research/Academic Interests
My research interests parallel my clinical and operational improvement interests; improving the quality, safety, and efficiency of patient care with research like rigor and innovative methods. I have extensive experience in DVT prevention, inpatient glycemic control, prevention of adverse drug events, and transitions of care.

Michael K. McCloud, M.D.

### Clinical Interests
Duke University-trained geriatrician Michael K. McCloud is a clinician-educator whose focus is on optimal wellness after age 65. He has special interest in the post-diagnostic management of memory-impaired older adults. He developed the UC Davis Internal Medicine Faculty Practice, and co-directs the Geriatric Clinic. He is a founding member of the medical-scientific council of the Alzheimer’s Association of Northern California and lectures nationally on issues of aging and health. Dr. McCloud is the creator and course director of UC Davis’ acclaimed program "Medical Science and Aging: A Mini Medical School to Prepare for Life’s Second Half." Since 2001, this tuition-free program has opened the doors of UC Davis School of Medicine to more than 2500 individuals to learn the secrets of healthy aging from top faculty members. Dr. McCloud’s mission is to improve health care delivery to older adults, and to excite young physicians and nurses into geriatric careers.

© 2018 UC Regents
A member of the UC Davis faculty since 1982, Dr. Meyers has distinguished himself as a national expert in hematology and oncology, with a special emphasis on cancer molecular biology, metastatic cancer, end-of-life care and pain management. He served as chair of the Department of Internal Medicine for 12 years, senior associate dean for academic affairs and medical director of home health services.

Under Dr. Meyers’ visionary leadership, the Department of Internal Medicine flourished as a productive and dynamic center of academic medicine. With a focus on translating basic science research into clinical therapies and advancing the practice of evidence-based medicine, the department’s academic and clinical programs have made high-impact innovations to advance health.

Dr. Meyers is a longtime leader of the hospice movement in the United States, establishing programs that are now national models for providing compassionate, end-of-life care. He is well-known for his work in “simultaneous care,” a model of care that allows cancer patients with advanced disease to receive both investigational treatments and palliative care.

Dr. Meyers is also the executive director of Medical Education and Academic Planning for the University of California, Merced. He is leading the effort to begin a UC Merced medical school that would train new physicians in the San Joaquin Valley to provide care in the medically underserved communities.

Dr. Morrissey has extensive experience managing patients with cystic fibrosis and bronchiectasis. He is skilled at performing a wide range of technically difficult procedures, including double-lumen intubation, whole-lung lavage and brachyradiation catheter placement. Dr. Morrissey's research focuses on airway disease and cystic fibrosis. He is studying the influence of oxidation on the pulmonary pathology of patients with cystic fibrosis.

I feel fortunate to have been able to join the UC Davis faculty. I not only care for patients in my area of specialization, but do so as a member of a talented, dynamic department that is active in teaching and research as well as clinical care. In this setting, I know my knowledge and skills will constantly expand, keeping me on the cutting edge of the profession and allowing me to give my patients the best possible care.

Dr. Murin's key interests encompass smoking and the lung, deep venous thrombosis and pulmonary embolism, heritable thrombophilias, and resource utilization, including the influence of education on this subject matter. Her clinical projects include the effects of smoking on breast cancer, mechanical ventilation and the efficacy of weaning protocols, and improved approaches to pleural effusion.

Barao I., M. Alvarez, Redelman D., Weiss JM, Ortaldo JR, Wiltrout RH, and Murphy WJ.
Understanding of the immunological cause of diseases was just beginning when I was in residency. The specialty intrigued and challenged me, both then and now. Education is the most important service that I deliver. Patients need knowledge to make the best decisions. I enjoy teaching patients, nurses, students?everyone. I believe in a team approach to medical care and that the patient is a full partner in health-care delivery. UC Davis has a special commitment to teaching and a wealth of resources, including professional and technical expertise, equipment and dedication to excellence.

In addition to his expertise in the full spectrum of allergic and rheumatologic diseases, Stanley M. Naguwa has a special clinical interest in Sj??gren's syndrome, rheumatoid arthritis, and complex allergic diseases. Prevention, patient education and public awareness are important focuses of his work. His research focuses on biologic markers for SLE.

© 2018 UC Regents
My approach to excellent patient care is simple. I listen first and then ask questions. I make sure that all patient concerns have been acknowledged and have a working plan by the end of the visit. The patient is the focus and not the computer screen.

I also believe in direct communication between the patient and the doctor. For this reason, I rely heavily on My Chart which allows patients to email me directly. This allows for ongoing support to the patient. I also believe in staying current with evidenced-based patient care.

My participation in the residency program as one of the primary teachers in both clinic and hospital settings forces me to stay updated on medical research that directly affects patient care.

Dr. Katie Newell has been practicing Primary Care Internal Medicine at UC Davis since 2001. As a member of the Internal Medicine Faculty Practice, she provides direct primary care to a large, diverse group of patients.

She also participates in the UC Davis Internal Medicine residency program in many capacities including outpatient teaching, inpatient teaching, and by participating in the Residency Selection Committee.

She also works directly with UC Davis medical students through clinic supervision, rounding on the wards and by participating in the Endocrinology Case series. This year she will be co-staffing the Musculoskeletal Specialty clinic at the Sacramento County Clinic.

Teaching in the residency program and medical school at UC Davis. Direct patient care through the Internal Medicine Faculty Practice and the Musculoskeletal clinic at Sacramento County Health Clinic.

Dr. Parikh is an adult medical oncologist who specializes in medical treatment of genitourinary malignancies including kidney/renal cell, bladder, prostate, ureteral and testicular cancer/germ cell tumor cancers. She is a strong advocate for providing patients with comprehensive care such as mutational profiling, regional therapies, clinical trials and supportive care.

Dr. Parikh is interested in conducting clinical trials for these malignancies and has a particular interest in novel treatments for prostate, renal, and bladder cancer including molecular targeted therapies, immunotheerapies and therapies to overcome resistance.

Clinical Interests

Debora A. Paterniti earned her doctorate in sociology from UC Davis and completed a fellowship in health policy and health services at Yale School of Medicine. She is an expert in the application of qualitative research methodology to questions of health services. Her areas of specialization include medical and applied sociology and social psychology. She received a University Teaching Award from UC Davis in 2003. Dr. Paterniti currently teaches research design, medical sociology, and social welfare and health. Her research interests include studies of informed consent, physician-patient interaction and decision-making, and community-based research.

**Philosophy of Care**
I consider the highlight of my work at UCDMC the performance of a wide variety of complex invasive electrophysiologic (EP) procedures. Of great importance, our patients are experiencing arrhythmia-free survival off of antiarrhythmic drugs after ablation for atrial fibrillation and ventricular tachycardia.

**Clinical Interests**
Cardiac electrophysiology, the science of elucidating, diagnosing, and treating the electrical activities of the heart. Performing a wide variety of invasive procedures including mapping and ablation of SVT, VT, and atrial fibrillation, device implantation including cardiac resynchronization.

**Research/Academic Interests**
My clinical and research interests focus on ventricular tachycardia in a normal heart and sudden cardiac death.

Chinh Phan, D.O.

**Philosophy of Care**

I believe quality health care involves a shared decision making process with patients and their families through values that reflect honest communication and compassion.

It is my role and responsibility to provide support and guidance using a multidisciplinary approach that incorporates evidence based medicine and expertise for patients and their families to make an informed, individualized, and efficient decision.

**Clinical Interests**

Dr. Phan’s clinical interests includes the management of thoracic malignancies, airway disorders, and pleural diseases using minimally invasive diagnostic and therapeutic techniques.

Dr. Phan has advanced Interventional Pulmonology training in the following procedures: flexible and rigid bronchoscopy, ablative therapies including argon plasma coagulation, lasers, cryotherapy, photodynamic therapy, and electrocautery, brachytherapy, cryobiopsy, convex and radial endobronchial ultrasound, endobronchial stent placement (silicone, hybrid, and metallic), endobronchial valve placement, navigational bronchoscopy for the diagnosis of peripheral lung lesions, balloon bronchoplasty, large volume lung lavage, percutaneous tracheostomy, percutaneous endoscopic gastrostomy, medical pleuroscopy, pleurodesis, tunneled pleural catheters, pleural biopsy, lung and pleural ultrasound, thoracentesis, chest tube placement, and bronchothermoplasty.

**Research/Academic Interests**

Dr. Phan’s academic focus is on clinical research to improve advanced bronchoscopic and pleural techniques and evaluating new therapies for the treatment of lung cancer and pleural disease.

As a clinician-educator, his focus is on the development of simulation based learning to enhance pulmonary procedural skills as well as course and curriculum development.

Ben A. Rich, J.D., M.A., Ph.D.

Clinical Interests
Dr. Rich is an attorney with a doctoral degree in philosophy. He has substantial experience in both private practice and as a legal counsel for several leading academic medical centers. His special interests include the legal and ethical aspects of the physician-patient relationship, end-of-life care and pain management. He received the Mayday Scholar's Award and the University of Colorado President's Fund for the Humanities Award. Dr. Rich is working to further develop the UC Davis Bioethics Program and its training of medical staff, students and other professionals.

Rich, B. A. Prospective autonomy and critical interest: a narrative defense of the moral authority of

Irina Richards, M.D.

I became a physician because I enjoy helping and working with people. I subsequently chose the specialty of Internal Medicine as it allows me to treat a wide variety of conditions and thus focus on the “whole” patient. I believe in practicing medicine with compassion and respect. Getting to know my patients is the ultimate privilege of my job.

Dr. Richards is interested in Preventative Medicine, promoting a healthy lifestyle, and exploring and applying the mind and body connection to improve health.

Dr. Rodler admires the courage and fortitude that her cancer patients show on a daily basis and tries to help them through this difficult period. She researches all available treatment options and advise each patient as she would a family member. Her goal is to provide my patients with clear information in understandable language, and then to partner with them to decide which is the best treatment for them. She is a strong advocate for her patients and promise to support them during each stage of their cancer care.

Dr. Rodler is a clinician investigator in both breast cancer and sarcoma.

Dr. Rodler’s research interests are in triple negative breast cancer treatment. She specializes in breast cancer clinical care and research. Her area of research interest in is hormone receptor negative, HER2/neu negative breast cancer ("Triple negative breast cancer"). She is the principal investigator for a phase I clinical trial in patients with metastatic triple negative breast cancer which is exploring the efficacy of using a chemotherapy drug combination that causes DNA damage, and a new drug called a "PARP inhibitor" which acts as a double hit to these tumor cells. Poly (ADP-ribose) polymerase (PARP) inhibitors inhibit DNA repair in cancer cells that have pre-existing DNA repair defects, but not normal cells.
Eve Therese Rodler, M.D.

My philosophy of care is to give every patient an exceptional care experience at a level that I would provide for my own family. I enjoy listening to my patients' personal lives and view each one as an individual with unique concerns and needs. My goal is to always provide the highest level of compassionate and skillful care for my patients.

Dr. Rogers is board certified in interventional cardiology and vascular medicine, and is an integral member of the cardiovascular clinical and research program. He serves as the Director of Interventional Cardiology and is the Program Director for the Interventional Cardiology Fellowship.

Dr. Rogers has been widely published and has served as invited faculty at national and international meetings. His current clinical focus is the treatment of adult structural heart disease using minimally invasive transcatheter methods, such as MitraClip therapy for mitral regurgitation and transcatheter left atrial appendage occlusion.

Dr. Rogers serves as the Medical Director of the Cardiovascular Medicine Clinical Research Unit. Research is directed at the treatment of adult structural heart disease with an emphasis on the management of valvular heart disease using emerging minimally invasive and percutaneous procedures.

Clinical Interests

Patrick Scott Romano, M.D., M.P.H., FACP, FAAP

Clinical Interests
Dr. Romano practices primary care (outpatient) general internal medicine and general pediatrics in a team approach with physicians-in-training.

Research/Academic Interests
Dr. Romano's research and teaching interests focus on developing, testing, and validating health care quality measures, using outcomes data to improve the quality and effectiveness of health care, and studying the role of physicians and nurses in optimizing quality and safety across the health care industry.

His research program is supported by the US Agency for Healthcare Research and Quality, the Robert Wood Johnson Foundation, and numerous State agencies, and has resulted in over 186 peer-reviewed publications.

He now serves as Co-Editor in Chief of Health Services Research (HSR), an official journal of AcademyHealth published by the Health Research & Educational Trust (HRET), and as Director of Quality, Safety, and Comparative Effectiveness Research Training in Primary Care (QSCERT-PC), a T32 primary care research training program supported by the Health Resources and Services Administration.

Jamie L. Ross, M.D.

Interventional nephrology is a subspecialty designed to ensure that patients receive and maintain the vascular and/or peritoneal access they need to start or continue dialysis. Using the latest techniques in fluoroscopic evaluation and intervention, Dr. Ross diagnoses, treats and monitors patient dialysis access. She has been dedicated to this type of care for more than 10 years, ensuring that kidney disease patients have a better quality of life.

Dr. Ross focuses her research on the triad of blood flow, vascular injury and accelerated thrombosis to improve the success of vascular dialysis access. These areas of vascular research are all vital to understanding the accelerated damage to blood vessels that is prevalent in kidney disease patients.

Saul Schaefer, M.D.

**Philosophy of Care**
My goal is to thoughtfully listen to and evaluate a patient's complaints and develop an evidence-based diagnostic and therapeutic plan that aligns with the patients goals.

**Clinical Interests**
Dr. Schaefer focuses his clinical research on the utilization of non-invasive cardiac testing to diagnosis ischemic heart disease and pulmonary embolism.

**Research/Academic Interests**
Dr. Schaefer's laboratory studies involve the modulation of calcium uptake into mitochondria as a method of preventing and treating heart failure. These studies use transgenic mice with conditional knockout of the mitochondrial translocator protein.

Michael Schivo, M.A.S., M.D.

Dr. Schivo’s clinical interests include airway diseases focusing on COPD and other obstructive lung diseases such as asthma. He is part of the Reversible Obstructive Airway Diseases (ROAD) Center, the UC Asthma Network (UCAN) Clinics, and the Center for Comparative Respiratory Biology and Medicine (CCRBWM) at UC Davis. Dr. Schivo also has a general Pulmonology clinic once a week in Rocklin, CA.

Dr. Schivo focuses on analysis of exhaled and emitted volatile organic compounds (VOC) with the aims of non-invasive diagnostics, disease monitoring, and evaluation of therapeutic response. He collaborates highly with biologists, chemists, chemometricians, engineers, and pediatric/adult clinicians to coordinate clinical trials utilizing VOC analysis in disease states. His research spans from in-vitro epithelial models to human subject studies.

Dr. Schivo believes that patients should receive the best care available. This includes thorough and compassionate clinic visits, subspecialist referrals when appropriate, and access to clinical research studies. Through this level of care and attention, Dr. Schivo believes that all patients can benefit.

© 2018 UC Regents
Dr. Eleanor Bimla Schwarz, M.D., M.S.

**Philosophy of Care**

Dr. Schwarz's philosophy of care is patient and family-centered. She has great respect for the social determinants of health and the ways culture frames people's illness experience. Dr. Schwarz welcomes LGBT patients to her practice and does her best to foster a safe and caring environment for all patients.

**Clinical Interests**

Dr. Schwarz's clinical interests include primary care, health maintenance, preventive care, family planning and women's health. She is happy to place (or remove) highly effective reversible contraceptives (i.e. IUDs or Nexplanon) for patients who desire such services.

**Research/Academic Interests**

Dr. Schwarz is an internationally recognized health services researcher whose work has centered on the use of technology to promote health, improving pregnancy outcomes through innovative approaches to family planning service delivery, and quantifying the effects of lactation on maternal health. These areas of inquiry are interrelated in seeking to broaden understanding of the ways social policies and healthcare delivery systems affect health-related behaviors and long-term health outcomes.

Dr. Schwarz has a particular interest in identifying ways to better meet the needs of diverse and vulnerable populations, including women with chronic medical conditions and other underserved populations.

Dr. Schwarz has served as a Senior Medical Expert in Reproductive Health for the US Department of Veterans Affairs, medical consultant for the California Department of Healthcare Services' Office of Family Planning, as a Deputy Editor for the Journal of General Internal Medicine, Associate Editor of Journal Watch Women's Health, and as a member of the FDA's Advisory Committee on Reproductive Health Drugs. She is a Fellow of the Society of Family Planning, and past-chair of the Society of General Internal Medicine's Taskforce on Women's Health.

Alison Marie Semrad, D.O.

**Clinical Interests**

Thyroid Cancer, Iodine-Refractory Thyroid cancer

Dr. Semrad is an Associate Health Sciences Clinical Professor in Endocrinology. At the Betty Irene Moore School of Nursing at UC Davis she serves as the medical director for the physician assistant program as well as an instructor of record for the first year NPPA Endocrine course. She is Program Director for the Endocrinology Fellowship as well as a faculty advisor for residents & medical students.

She co-founded UC Davis Medical Center's multidisciplinary thyroid cancer clinic. She co-chairs the Endocrine tumor board with the Department of Otolaryngology and Endocrine Surgery and Medical Oncology. Her clinical interests include thyroid cancer. Semrad's research interests focus on health outcomes in thyroid cancer and iodine-refractory thyroid cancer.

Our main topic of research is chronic HIV infection, with an emphasis on the body's immune response to HIV in the gastrointestinal and reproductive tracts as well as the central nervous system. We are also very interested in HIV prevention strategies, including vaccines and microbicides. Work in the laboratory is funded by grants from the National Institutes of Health (NIH). Our major areas of study can be summarized as:

1) Cellular Immunology: T-cell biology, innate-like T-cell subsets
2) Mucosal Immunology: Adaptive immunity in the gastrointestinal and reproductive tracts
3) Infectious Diseases: HIV and other sexually transmitted diseases. Emerging viruses.

**Philosophy of Care**

I enjoy forming long-lasting relationships with and learning about my patients before tackling their medical issues, which allows me to better individualize their care. I feel it's important to regularly engage my patients in shared decision making regarding diagnostic and therapeutic interventions. I strongly believe in preventative care to reduce sickness resulting from many largely avoidable medical conditions.

**Clinical Interests**

Dr. Shimatsu is an internal medicine primary care provider for adult patients and manages chronic medical diseases such as diabetes and hypertension with an emphasis on preventative medicine. She performs some office-based procedures including pap smears.

**Research/Academic Interests**

Dr. Shimatsu's current clinical interests include weight loss medicine and cost-conscious, appropriate medical care.

Deliver patient-centered, evidence-based, quality cardiovascular care through a compassionate and open patient-physician relationship. My hope is for each patient to receive personalized care for their given lifestyle, quality of life, and overall goals.

Not all patients fit the mold of clinical trials and no single patient nor their families want to be treated as such. Each patient presents with a problem that is unique to them and while there may be many different ways to treat a particular problem, my job is to find the solution that best fits the patients needs in efforts to improve quality of life and their overall lifespan.

Dr. Singh is a board certified cardiologist and interventional cardiologist who received his medical degree from New York Medical College with induction to the Alpha Omega Alpha Society on graduation. He completed both internship and residency at Stanford University. He completed his cardiology, interventional cardiology, and vascular medicine/intervention training at UCDMC where he received Clinical Fellow of the Year Award and Trainee Research Award with the Department of Internal Medicine.

His clinical interests are the development, practice, and research of a range of minimally invasive procedures for the treatment of complex coronary, structural, and vascular diseases. His other major interest is in educating and mentoring the doctors of tomorrow by working with medical students, residents, and fellows on the inpatient and outpatient cardiology services, and creation and development of research projects to help foster life-long learning and evidence based medical practice.

Dr. Singh is an investigator on multiple research protocols directed at the treatment of heart and vascular disease. He has co-authored several published articles relating to his research interests.

**Clinical Interests**

Thomas Smith is a specialist in cardiovascular imaging utilizing multiple techniques including echocardiography (transesophageal and transthoracic), computed tomography, nuclear medicine and magnetic resonance imaging to evaluate cardiac structure and function. He completed his general cardiology fellowship here at UC Davis with additional, advanced training at Cedars Sinai. Currently, he is the Director of the Adult Echocardiography Laboratory. His clinical interests include echocardiographic guidance of minimally invasive cardiac procedures, cardiac computed tomography, valvular heart disease and prevention of coronary artery disease.

**Research/Academic Interests**

Dr. Smith is active in multiple research studies focusing on transcatheter aortic valve replacement and transcatheter mitral valve repair. He is also involved in research studies using specialized blood tests and nuclear imaging to evaluate the heart muscle following myocardial infarctions.

Dr. Sood believes that providing care for patients is a partnership between the patient and physician. He likes to understand the thought processes of his patients and tries to provide care that harmonizes with their view point. While making sure that the care is based on best medical evidence and current standards, he makes patient satisfaction his top priority.

**Philosophy of Care**

Dr. Sood is an endocrinologist providing care to patients with diabetes mellitus and other hormone disorders, including those involving thyroid, adrenal, pituitary, osteoporosis and hypogonadism. He has special interest in health care delivery for patients with diabetes mellitus and using telehealth technology for the care of these patients.

**Clinical Interests**

Dr. Sood clinical research is related to diabetes mellitus. He has been an investigator in several clinical trials in the field of diabetes mellitus, including ACCORD, LEADER, DEVOTE and GRADE trials.

Dr. Sood is interested in different models of health care delivery for patients with diabetes mellitus, including the role of telemedicine in health care delivery. He is also involved in continuing medical education of primary care providers as related to management of patients with diabetes mellitus.

I do my best to treat patients with the same care I wish my family to have. I serve as a medical advisor to my patients trying to explain why we should do the things I am suggesting. Ultimately the decision is theirs to make. Sometimes patients come to me because they are frustrated with the medical system. Lending a comforting ear can be all the medicine that is required.

Dr. Southard is an interventional cardiologist with an interest in cardiovascular medicine. He sees patients in clinic, in the hospital and in consultation. He is the director of the Transcatheter Aortic Valve Replacement Program and has been the principle investigator in many research related valve trials.

In addition his research interests focus on expanding care to patients in underserved areas and he is working with our Telemedicine program to continue cardiology consultation in that regard. He also has an interest in patients with hypertrophic cardiomyopathy and was the principle investigator for the first ever cardiovascular stem cell trial here at UC Davis.

Dr. Southard’s research interests include Transcatheter Aortic Valve Replacement, Hypertrophic Cardiomyopathy and Optical Coherence Tomography.

Clinical Interests
I have been privileged to serve our diverse patient population, in both inpatient and outpatient settings. As a physician and medical educator, I strive to promote best practices in medicine, through compassionate, evidence-based care. I believe that partnership between patients and physicians is essential to achieving the best possible health outcomes. My special interests are in doctor-patient communication around challenging topics, such as palliative care, mental health and medical genetics. Additionally, I work to improve physician competency in these and other areas, through curriculum development, evaluation, and individualized feedback.

In general, Dr. Stebbins' research interest is control of the circulation as it relates to regulation of blood pressure and blood flow during exercise. Of particular interest to him are endothelial function and vascular biology as they relate to regulation of skeletal muscle blood flow. Recent studies have focused on the effects of dietary supplements such as fish oils, nitrates and polyphenols on blood pressure, blood flow and vascular function in healthy individuals as well as those with pre-hypertension.

Patients want high quality medical care, and they want it provided in an efficient and timely manner. They also want a health care provider that values communication; one that communicates with clarity and compassion. I share these beliefs. It is my goal to provide care that reflects these values.

Dr. Stollenwerk's clinical interests:

Pulmonary Medicine:

1. Interventional Pulmonology: advanced diagnostic bronchoscopy, airway interventions, and pleural disease management
2. Lung cancer: diagnosis, staging, and management
3. Cystic fibrosis

Critical Care Medicine:

1. Medical critical care
2. Multidisciplinary care for critically ill subspecialty patients
3. Bedside ICU procedures for the diagnosis and management of critical illness

Point-of-care ultrasound:

Independent of the specific disease being managed, I am interested in the application of ultrasound performed by the clinician at the time of direct patient care. This application of point-of-care ultrasound can improve the safety of medical procedures, improve diagnostic accuracy, and help direct patient management and further diagnostic testing.

As a clinician-educator, my academic interests focus on bedside teaching, as well as course and curriculum development. Specifically, I am interested in the following:

1. Developmental learning theory for training future physicians: I am primarily interested in teaching learners the skills they need to become better future clinicians. However, I am particularly interested in teaching students, and young physicians, how to become better leaders and teachers themselves. It is also my goal for learners to develop the skills necessary to continue to learn after they finish training.
2. Teaching procedures: In additional to teaching basic and advanced procedures, I focus on improving procedure safety and teaching less invasive procedural approaches.
3. Expanding the application of point-of-care ultrasound: I am interested in expanding use in
both in the inpatient and outpatient clinical setting, and for diagnosis and for therapeutic procedures.

Flora Wai Stondell, R.N., M.S.N.: FNP-C

**Philosophy of Care**
I am committed in providing the highest standard of care for our patients. Care that is knowledgeable, accessible, and sensitive to their needs.

**Clinical Interests**
Flora specializes on Bone Marrow/Stem Cell Transplant, which includes: autologous, allogeneic (matched and mis-matched donor), and haplo-identical transplant. She focuses on the care of patients during pre-transplant, during transplant course (in the hospital setting), and post-transplant.

She performs bone marrow biopsies and aspirations; and supervises the infusion of cryopreserved stem cells for autologous transplant patients. She also assists in providing consultation for patients that may be eligible for transplant.

### Philosophy of Care
My aim is to provide the best possible care for a challenging chronic condition. With each patient I hope to provide long term solutions with the goal of preventing progression of disease and improving quality of life.

### Clinical Interests
I am a locally trained gastroenterologist with a primary focus on inflammatory bowel disease. Our medical center provides a modern approach to treatment with experts in nutrition, pharmacy, and surgery to provide complete care for the IBD patient.

### Research/Academic Interests
Dr. Stondell’s research interests include: clinical trials for new medications related to IBD treatment, and water colonoscopy trials.

Dr. Swislocki's research interests include disorders of insulin resistance, specifically: Hypertension, diabetes mellitus, complications of diabetes mellitus, and pathophysiology of insulin resistance. He is also interested in delivery of health care to people with chronic metabolic diseases, including diabetes, hypertension, and osteoporosis.

Dr. Swislocki is board-certified in Internal Medicine and Endocrinology and Metabolism. His practice is by referral and almost entirely clinic-based. His primary interest is in disorders of insulin resistance, such as hypertension, diabetes, and diabetes complications, but he is also interested in caring for patients with chronic metabolic diseases such as obesity and osteoporosis, as well as more general endocrinologic disorders. Dr. Swislocki is currently a member of the VA VISN 21 Endocrine Task Force addressing appropriate goals of therapy, and safety issues, for diabetes and male hypogonadism, and other endocrine and metabolic disorders. He is also part of a national VA Transgender Working Group focused on providing consistent, multispecialty, state-of-the-art care for Trans Veterans.

I believe in patient-centered, evidence-based, and collaborative care and strive to incorporate the benefits of these into gastrointestinal endoscopy and indeed the practice of medicine. My goal is to provide compassionate and effective care to help preserve quality of life and ensure that all patients have an optimal healthcare experience.

Dr. Tabibian is specially trained in advanced therapeutic endoscopy, including specialized procedures such as ERCP, EUS, EMR, RFA, luminal stenting, and balloon enteroscopy. He also has expertise in the management of bile duct disorders (i.e. "cholangiopathies"), in particular primary sclerosing cholangitis and other stricturing conditions. Dr. Tabibian's clinical interests encompass these areas of focus as well as training the next generation of academic gastroenterologists.

Dr. Tabibian's research interests include: Advanced endoscopy, Bile duct disorders, in particular primary sclerosing cholangitis, Clinical trials, Clinical outcomes research, Mentoring gastroenterology fellows, residents, and medical students, and Promoting diversity in medicine.

Philosophy of Care

Working as a night physician, I am here to provide the initial medical care for you when you are admitted to the hospital. My goal is to find out what is happening so that we can help you as best as possible.

I communicate to the day hospitalist physician in order to continue care for you throughout your hospital stay.

Clinical Interests

I provide medical care for inpatients. I admit patients overnight, cross-cover for already admitted patients, and coordinate care with other services.

Sooraj Tejaswi, M.D., MSPH

Philosophy of Care
I will treat every patient in the same way that I would like my family member be taken care of, and I will strive to make sure that no one suffers for lack of knowledge, effort, or compassion on my part.

Clinical Interests
Treating biliary and pancreatic diseases, treating everyday gastrointestinal problems such as heartburn and constipation, screening for and preventing colon cancer.

Research/Academic Interests
- Studying disease characteristics of colon cancer among racial and ethnic minorities, especially among Asian Indians.
- Exploring newer methods of colonoscopy such as water colonoscopy and CO2-assisted colonoscopy.
- Mentoring Gastroenterology Fellows in their clinical, academic, and research endeavors.
- Quality improvement initiatives aimed at increasing colon polyp detection, while increasing patient satisfaction and comfort with screening colonoscopy.

Suzanne Teuber specializes in allergy and clinical immunology with a particular interest in food allergies of all types and anaphylaxis. She aims to ensure that each patient is armed with knowledge of triggers and exacerbating factors as well as how to avoid accidental exposures and have a plan of action. Her research is in the area of characterizing tree nut and seed allergens, and investigating cross-reactivity among nuts, seeds and legumes. She is the training program director for the Allergy and Immunology Fellowship Program at UC Davis.

George Thompson, M.D.

Clinical Interests
Dr. Thompson is Associate Professor of Clinical Medicine at the University of California, Davis, School of Medicine with a joint appointment in the Departments of Medical Microbiology and Immunology, and Internal Medicine, Division of Infectious Diseases. Dr. Thompson specializes in the care of patients with invasive fungal infections and has research interest in fungal diagnostics and host immunogenetics. His current research focuses on the host-pathogen interaction of humans and both Coccidioides spp. (the agent of “Valley Fever”), and Cryptococcus spp. Dr. Thompson has served on the IDSA Journal Club which is a committee comprised of 12 panelists who select key papers for review and compose a summary of important articles that is published in the internationally disseminated monthly IDSA News. Additionally, he is a member of the Coccidioidomycosis Study Group Planning Committee, and as Co-chair of the Mycoses Study Group - a committee responsible for the development of content and dissemination of materials to practitioners across the United States, planning of the mycology content at our yearly meetings (IDSA and ICAAC), and the design of clinical trials.

© 2018 UC Regents
Elisa Tong is a general internist who helps take care of patients in the clinic and hospital settings. Her area of interest is in tobacco cessation and its cross-cutting impact on health and wellness for smokers and their families. Tobacco not only is an important risk factor for cancer and cardiopulmonary death and disease, its use can increase infections, worsen surgical healing, and affect the metabolism of medications.

The U.S. Surgeon General has also determined there is no safe level of smoke exposure for nonsmokers. Since tobacco is one of the most addictive substances, it can take at least 8-12 tries before a smoker can quit for good, but each try is a closer step to success. UCDMC offers tobacco cessation classes (livinghealthy.ucdavis.edu) and the California Smokers' Helpline at UC San Diego offers free telephone counseling and educational materials in different languages (www.nobutts.org).

Dr. Tong's research interests are in tobacco control policy and cessation, with special interests in secondhand smoke, diverse and underserved populations (particularly Asians), and health systems change.

She is the founding Project Director for "UC Quits", the UC-wide Tobacco Cessation Network across the 5 UC medical centers that has used the electronic medical record to help address tobacco at every clinical encounter and connect with the California Smokers' Helpline at UCSD. She has also worked on tobacco cessation interventions targeting community college students, Medi-Cal members, and Chinese smokers living with household nonsmokers.

Mukherjea A, Modayil MV, Tong EK. Paan (pan) and paan (pan) masala should be considered tobacco products. Tob Control. 2015 Dec;24(e4):e280-4.

I believe in a multidisciplinary approach to managing chronic diseases and empowering patients through education about their condition. My primary goals are to ensure that my patients have the best possible quality of life and survival by providing access to all appropriate therapies for their heart failure and to help them understand their condition so that they become members of the care team.

Dr. Tong's clinical interests rest in the management of heart failure patients, an expanding population in the United States. Research over the last two decades has brought the medical community many effective pharmaceutical and surgical treatments for heart failure, and patients currently have a better chance at having a meaningful quality of life than ever before.

I am currently involved in a research project that evaluates the effectiveness of a multidisciplinary strategy in the transition of care of heart failure patients from the inpatient to the outpatient setting. I have additional training in advanced heart failure therapies such as heart transplantation and mechanical assist devices so that I can help patients who are at the end stages of their disease navigate all possible treatment options.

Natalie J. Torok, M.D., M.Sc.

**Philosophy of Care**
As a hepatologist and certified transplant hepatologist, I take care of patients with end-stage liver disease and also provide post-transplant care, including management of immunosuppression and treatment of post-transplant hepatitis C.

I see patients with nonalcoholic steatohepatitis (NASH), alcoholic liver disease, and autoimmune hepatitis. Also, we provide comprehensive care for patients with hepatocellular carcinoma.

**Clinical Interests**
Dr. Torok's clinical interests include; Gastroenterology and Hepatology, Transplant Hepatology, and Internal Medicine.

**Research/Academic Interests**
Our research focuses on wound healing and the basic mechanism of fibrosis in the liver. We explore the pathways linking chronic liver injury, hepatocyte death and the activation of hepatic stellate cells, the principle fibrogenic cells of the liver.

Our investigations led to the discovery of the important role of the NADPH oxidases in stellate cell activation and the production of oxidative radicals. Based on our findings our aim is to explore the specific role of NADPH oxidases in non-alcoholic steatohepatitis and alcoholic liver disease. Our ultimate goal is to move towards translational studies and to develop new therapies for patients with liver fibrosis and cirrhosis.

Shin-Ping Tu, M.D., M.P.H.

**Philosophy of Care**
My philosophy of care is to establish a partnership with my patients to enhance their health and manage their illness. Focusing on the whole person is paramount to my medical practice because of the impact different parts of our bodies and the environment we live in have on health and disease.

**Clinical Interests**
Dr. Tu is a board certified general internist who has provided comprehensive medical care for nearly 25 years.

**Research/Academic Interests**
Dr. Tu’s research interests encompass early detection of cancer, cardiovascular health, tobacco control, cross cultural care, the dissemination and implementation of evidence-based interventions, and health care delivery in complex systems.

Philosophy of Care

Focused on patient-centered clinical care and researching application of technology for developing best care for gastrointestinal diseases in the patient.

Clinical Interests

Dr. Shiro Urayama specializes in advanced endoscopy including EUS (Endoscopic Ultrasound), ERCP (Endoscopic Retrograde Cholangiopancreatography) and various intra- and extra-luminal interventions including endoscopic mucosal resections/submucosal dissections, ablative procedures, and placement of luminal prosthesis for luminal and periluminal diseases.

He has published studies on the endoscopic approaches in GI cancers and investigations on novel detection modalities of precancerous lesions. Specifically his research involves the application of endoscopic ultrasound, tumor markers for early diagnosis of pancreatic cancers, and the applications of optical technologies in early detections of dysplasia and cancer in esophagus.

Research/Academic Interests

Diagnostics and endotherapeutics for gastrointestinal malignancies specifically in upper GI tract and pancreaticobiliary organ. Translational research in pancreatic and esophageal cancer for development of early detection biomarkers.

Sandhya Venugopal, M.D.

**Philosophy of Care**
My goal has always been to provide the best standard of care for my patients. I strongly believe that decision-making in healthcare should be collaboration between the healthcare team and the patient and family. Communication is key. In order to make this collaboration work well!

**Research/Academic Interests**
Dr. Venugopal's unique skills and passion lie in imparting optimal medical education to the adult learner. She endeavors to constantly search and continually strive to reshape the role of the clinician educator. She is a talented lecturer, leader, and respected member of the UC Davis School of Medicine; dedicated to the interrelatedness of teaching, student learning and development, research and scholarship, and applied clinical skills.

Heather Anne Vierra, M.D., M.P.H.

© 2018 UC Regents
My philosophy of care is woman-centered and culturally sensitive, with respect for each patient, and a goal of empowering women.

Dr. Villablanca is a preventive cardiologist who focuses on treating heart disease in women with the explicit goals of improving health-care outcomes and reducing gender-based health disparities. Her areas of expertise include all aspects of heart disease in women with specific interest in ischemic heart disease, chest pain syndromes with nonobstructive coronary artery disease (microvascular), preventive cardiology and the use of evidence-based guidelines for heart disease prevention in women, cardiac risk assessment including cardiac conditions associated with pregnancy (hypertension, diabetes, pre-eclampsia), cholesterol and lipid disorders, autonomic dysfunction including POTS, heart failure and peripartum cardiomyopathy, valvular heart disease, and arrhythmias in women.

Dr. Villablanca is professor of cardiovascular medicine, a physician-scientist with over 25 years experience in academic medicine, and a pioneering clinician in the field of women and heart disease. She is interested in the study of cardiovascular disease and prevention, with a focus on gender and sex differences and conditions that are unique to women or have female predominance. In 1994, she founded and became director of the UC Davis Women's Cardiovascular Medicine Program, the first women's heart program in the nation, that focuses on addressing the under-recognition, under-treatment and under-study of heart disease in women with the primary goal of improving outcomes and enhancing prevention.

Her translational research program focuses on understanding the molecular and cellular determinants of atherosclerosis, the mechanisms whereby hormones and their receptors regulate susceptibility to cardiovascular disease in males and females, and the vascular determinants that may contribute to dementia in males and females. She is also a leader in community-based participatory research, and has developed and assessed efficacy of heart disease prevention models for improving heart disease outcomes in women in community settings who are at high-risk for cardiovascular disease. Dr. Villablanca's research has been funded by several NIH Institutes, including the National Heart, Lung, and Blood Institute (NHLBI), the National Institute on Aging (NIA), and the National Institute of General Medical Sciences (NIGMS); as well as by the U.S. Dpt of Health and Human Services, Office of Women's Health; and the NIH Office of Research on Women's Health where she was profiled as a 'woman scientist in action'.

Additionally, Dr. Villablanca is a mentor, champion and scholar for women in science careers. Her research team was the recipient of one of 14 NIH grants addressing issues posing barriers to women in the academic biomedical workforce, with a focus on career flexibility and family friendly...
practices. She helped to establish the School of Medicine's faculty development, diversity, mentoring, and women in medicine programs at the UC Davis School of Medicine and currently serves as director of the Women in Medicine and Health Sciences Program. She is also a co-chair of the national Research Partnership for Women in Science Careers to provide leadership and new insights into the key factors that promote the inclusion, retention, success, and advancement of women in academia.

Anastasia C. Waechter, M.D.

**Philosophy of Care**

I enjoy gastroenterology because it is a diverse specialty that encompasses a variety of illnesses and also has a pivotal role in the prevention of diseases like colon cancer. Furthermore, I get the chance to help patients in the acute hospital setting as well as follow patients with chronic gastrointestinal illnesses over the long term. In my practice, I focus on obtaining a thorough clinical history and educating patients about the known pathophysiology and available treatments for their illnesses. I view my relationship with my patients as a partnership with the goal of empowering my patients to take an active role in their own care through effective education and communication in order to obtain the best possible clinical outcomes.

Richard H. White, M.D.

**Philosophy of Care**
To provide patients with all the knowledge necessary to understand and take responsibility for their medical condition.

**Clinical Interests**
Dr. White's clinical interests include: Deep vein thrombosis, pulmonary embolism, prevention, treatment, epidemiology, rheumatology, and anticoagulation therapy.

**Research/Academic Interests**
Dr. White's research centers on diagnosis, treatment and prevention of deep vein thrombosis and pulmonary embolism, which collectively is called venous thromboembolism.
He runs a 3000 patient anticoagulation clinic and direct a thrombosis specialty clinic. Where they conduct clinical research and to clinical epidemiology studies using large data bases.

Michael S. Wilkes, M.D., M.P.H., Ph.D.

**Clinical Interests**

Michael Wilkes is widely known for his efforts to introduce medical students to the humanistic side of being a physician, and for working tirelessly to include the public health and social sciences as part of training physicians. During his tenure as Vice Dean of the Medical School he lead the way toward enormous changes in medical education at UC Davis including the rural prime program, the college system of mentoring, a new education building, and a dramatic shift away from lectures toward small group and interactive learning. Wilkes introduced UC Davis' "Doctoring" curriculum, a series of classes and seminars for all four years of medical school. Topics within the curriculum include doctor-patient communication, clinical reasoning and end-of-life care, to name but a few. Dr. Wilkes has extensive experience in the development, management, and evaluation of eLearning technologies. In his current capacity as Director of Global Health he works locally with the UC Davis Vet and Nursing faculty and with medical and health sciences schools around the world as they seek to train the most capable health providers to address local health needs. He serves as a reviewer for many medical publications. He is the Director of the UC Davis Adolescent Clinic.

Philosophy of Care

I will work with you to achieve your goals in life and support you towards them, through medical diagnosis, treatment and in other ways as appropriate.

Clinical Interests

Dr. Wise diagnoses and treats a range of rheumatologic conditions, including rheumatoid arthritis, systemic lupus erythematosus, osteoarthritis and others.

Research/Academic Interests

Dr. Wise is a clinical researcher with research interests in osteoarthritis, sex differences, trials, mindfulness and compassion, and pain.

Dr. Wu has used human lung cells and tissues as well as animal models to study the molecular mechanisms of various lung diseases in asthma, chronic obstructive pulmonary disease (COPD), cardiac fibrillation (CF), airway inflammation and infection, smoking, and inhalation toxicology. His focus is on the role of airway epithelial cells in the development of these diseases and the injury/repair response. Dr. Wu also is interested in the cell signaling, innate immunity and regulation of gene expression in airway epithelial cells. Recently, he has developed the application of stem cells for airway regenerative medicine.

Reen Wu, Ph.D.

© 2018 UC Regents
Ted Wun's clinical interests are malignant and non-malignant hematology and he maintains an active clinical practice. His primary areas of research have been in the pathophysiology and complications of sickle cell disease (SCD) and the epidemiology of venous thromboembolism with focus on cancer-associated thrombosis.

He and his colleagues demonstrated significant platelet and leukocyte activation in SCD and described platelet-erythrocyte aggregates in these patients. He has participated in several multi-center therapeutic trials in SCD and is the former Chair of the Sickle Cell Disease Advisory Committee of the National Heart, Lung, and Blood Institute.

He is presently co-PI on an NHLBI R21 determining the incidence of cancers in patients with SCD, and UC Davis PI for a HRSA funded SCD treatment demonstration project and the NHLBI funded SCD Implementation Consortium. Over the last decade he and colleagues at UC Davis have extensively described the epidemiology of venous thromboembolism (VTE) in patients with a variety of cancers. This widely cited work has identified certain cancer types and predictive factors associated with a high risk of symptomatic VTE and informed large prophylactic trials. More recently he founded the Center for Oncology Hematology Outcomes Research and Training (COHORT) with the goal of using innovative and robust epidemiological methods and large datasets to determine outcomes in hematological and oncological diseases with a focus on long term complications and health outcomes disparities.

In his role as associate dean for research in the School of Medicine, Wun is responsible for expanding the breadth and depth of research at the health system, as well as implementing the health system’s 2017 Strategic Plan to increase innovative research.

I enjoy the intellectual challenge of nephrology - sorting out the complex ways in which kidney disease interacts with other functions. I like to take the time to get to know the patients under my care, including their medical history, philosophy and approach to life. I try to help patients take care of themselves and participate as much as possible in the medical decisions that affect them. In my practice, I explain things as simply and thoroughly as I can so that each patient can understand the disease better. I think it is most important that patients know what the problem is and what treatment options are available so that they can fully participate in the decision-making process. My affiliation with UC Davis gives my patients access to everything from basic to very specialized care in an environment dedicated to scientific knowledge and teaching, rather than just the bottom line.

Jane Y. Yeun has particular interests in the treatment of glomerular diseases, management of hypertension, and peritoneal dialysis. She serves on the Medical Review Board, End Stage Renal Disease Network No. 17, an organization that monitors and reports to the Health Care Finance Administration concerning the medical care of patients with end-stage renal disease. Yeun conducts research on incidence of inflammation, cardiovascular disease and vascular access thrombosis among dialysis patients.

I firmly believe that patients with cancer are best managed with a multidisciplinary team approach, and that patients, along with their family members, are integral to the decision-making process. I feel extremely fortunate to be a part of our National Cancer Institute-designated cancer center, and to work alongside the dedicated physicians, nurses and other affiliated personnel who make it possible for our patients to have some of the very best care available anywhere in the world. In addition to offering state-of-the-art care and clinical research trials, we have the unique opportunity to discuss patients with lung cancer and other thoracic malignancies before an expert panel of subspecialists at our "tumor board." Whether it is to diagnose, treat or palliate lung cancer, it is through our tumor board, or through close consultation with my medical oncology, thoracic surgery, radiation oncology and thoracic radiology colleagues, that I am able to devise the best strategies for my patients. As an interventional pulmonologist, there are a variety of procedural techniques I can provide to establish a difficult diagnosis, to manage pleural effusions, and to treat endobronchial complications such as hemoptysis and bronchial obstruction. However, I know care must be individualized, as no single strategy works for all patients. Perhaps more so than for any other disease, a patient's overall condition as well as their desires and expectations play the most important role in this decision-making process.

Dr. Yoneda's primary outpatient clinical interests are in lung cancer and the thoracic complications associated with other malignancies. As an interventional pulmonologist, he is particularly interested in new and innovative techniques for the diagnosis, management and palliation of pleural effusions and endobronchial lung cancer. It is his belief that technological advances in these fields have improved patient comfort and safety, while improving outcomes and reducing length of hospitalizations. While a variety of procedural approaches are available, he believes that no single strategy works for all patients, and care must be individualized. Dr. Yoneda's hospital-based clinical interests are in general pulmonary and critical care medicine.

Dr. Yoneda's clinical research is focused on lung cancer, particularly with regard to the role of interventional pulmonology in the diagnosis, management and palliation of lung cancer, and the development of interstitial lung disease in lung cancer patients. He also conducts clinical trials in high-altitude medicine, chronic obstructive pulmonary disease (COPD), asthma and sepsis. His basic-science research has involved the study of alterations in airway epithelial cells exposed to tobacco smoke and on differential gene expression in lung cancer.

**Clinical Interests**
Ken Yomer Yoneda, M.D.

Department: Internal Medicine

Division: Pulmonary, Critical Care, and Sleep Medicine

Center/Program Affiliation: UC Davis Comprehensive Cancer Center

Address/Phone: UC Davis Comprehensive Cancer Center, 2279 45th Street Sacramento, CA 95817
Phone: 916-734-5959

Additional Phone: Physician Referrals: 800-362-5566

Education:
- M.D., Northwestern University School of Medicine, Chicago, Illinois, 1985
- B.S., UC Davis, Davis, California, 1978

Internships:
- University of Kansas Medical Center, Kansas City, Kansas, 1985-1986

Residency:
- University of Kansas Medical Center, Kansas City, Kansas, 1986-1988

Fellowships:
- UC Davis Medical Center, Sacramento, California, 1993-1996

Board Certifications:
- American Board of Internal Medicine, 1988
- American Board of Internal Medicine, Critical Care Medicine, 1998
- American Board of Internal Medicine, Pulmonary Disease, 1996

Professional Memberships:
- American College of Chest Physicians
- American College of Physicians
- American Thoracic Society

Honors and Awards:
- UC Davis, B.S. with honors, in Biochemistry, 1978

John C. Yoon, M.D., Ph.D.

**Clinical Interests**
Dr. Yoon's clinical interests are in Diabetes Mellitus.

**Research/Academic Interests**
Dr. Yoon is interested in molecular studies of metabolic regulation and human disease, with a particular focus on diabetes mellitus. Ongoing work utilizes a combination of experimental systems and approaches to investigate the role of specific intracellular signaling pathways such as the Wnt pathway in the regulation of muscle metabolism and their impact on physiological and pathological adaptations.

Another area of interest is the contribution of mitochondrial defects and inflammatory processes to the development of metabolic disease. Large-scale genetic screens in muscle cells have been performed to isolate regulators of mitochondrial function and some of the identified genes are being characterized.
