UC Davis Medical Group offers nationally renowned primary care and specialty expertise based at UC Davis Medical Center and multiple medical offices across the greater Sacramento region. Medical group physicians, nurse practitioners and clinical nurse specialists emphasize wellness and prevention, apply the latest knowledge to solve health problems and offer access to promising clinical trials, newly proven therapies and advanced technologies when needed.

FOR PATIENTS
Find a UC Davis physician, nurse practitioner or clinical nurse specialist
Consumer Resource Center: 800-2-UCDAVIS (800-282-3284)

• General information about available providers and services
• Assistance with appointments and referrals
• Information about accepted insurance plans

Established UC Davis patients can also use the MyChart web-based portal to communicate with their care teams, request certain appointments and refills, access medical records and more.

FOR HEALTH PROFESSIONALS
Outpatient referrals and provider phone consultations
UC Davis Physician Referral Center: 800-4-UCDAVIS (800-482-3284) Option #2 Monday | Friday, 8 a.m. to 5 p.m. Or online (non-urgent) requests via referrals.ucdavis.edu

• Information about availability of specialty services
• Coordination and status of referrals to specialty services
• Assistance for provider-to-provider phone consultations with specialists

Acute interfacility transfers and after-hours consultations
24/7 Transfer Center: 800-4-UCDAVIS (800-482-3284)

• Round-the-clock, R.N.-led coordination of acute interfacility transfers
• After-hours coordination of emergent provider-to-provider telephone consultations for complex or unusual cases
• Transfer requests evaluated based upon clinical urgency, availability of resources and other factors

Referring physicians can receive real-time access to test results and clinical information for their patients at UC Davis through the PhysicianConnect online electronic medical record.
Leonard Abbeduto, Ph.D.

Leonard Abbeduto is director of the UC Davis MIND Institute and holds the Tsakopoulos-Vismara Endowed Chair of Psychiatry and Behavioral Sciences at UC Davis. He is a nationally recognized expert on the behavioral profiles of individuals with intellectual disabilities, with particular focus on the development and use of language by these individuals.

The MIND Institute was recently named an Intellectual and Developmental Disabilities Research Center. As one of only 15 such centers nationwide, the IDDRC is funded by the Eunice Kennedy Shriver National Institute of Child Health and Human Development. IDDRCs promote multidisciplinary research and training focused on identifying gene-behavior relationships in neurodevelopmental disorders, as well as the treatment of these conditions.

Abbeduto’s research focuses broadly on the development of language across the lifespan in individuals with neurodevelopmental disorders and on the family context for language development. He also investigates the effects of stress on parents and caregivers who raise children with neurodevelopmental disorders, and how parent stress affects the behavior and development of their children.

Abbeduto’s research has been funded continuously by the National Institutes of Health since 1996. He has published more than 130 articles, book chapters, reviews and books on fragile X, autism, Down syndrome and other disabilities and has delivered numerous presentations throughout the nation and the world.

Abbeduto serves as the editor of the American Journal on Intellectual and Developmental Disabilities, the flagship journal of the American Association on Intellectual and Developmental Disabilities. He also directs the NIH-funded Interdisciplinary Training Conference on Developmental Disabilities, designed to foster an interdisciplinary approach to research on neurodevelopmental disorders in the next generation of scientists.

Current research projects in Abbeduto’s lab examine the feasibility of using samples of spoken language collected in naturalistic contexts as outcome measures in clinical trials. His lab also is developing a multimodal intervention, including both pharmacological and behavioral components, that will target the narrative language skills of 10- to 17-year olds with fragile X syndrome. The novel intervention will be delivered to participants through distance teleconferencing and will involve parents as the agents of change in delivering the intervention to their children.

David G. Amaral, Ph.D.

Dr. Amaral is a Distinguished Professor in the Department of Psychiatry and Behavioral Sciences at UC Davis. He is also the Beneto Foundation Chair and Research Director of the MIND Institute which is dedicated to studying autism and other neurodevelopmental disorders.

As Research Director, he coordinates a multidisciplinary analysis of children with autism called the Autism Phenome Project to define clinically significant subtypes of autism. More recently, Dr. Amaral has become Director of Autism BrainNet, a collaborative effort to solicit postmortem brain tissue to facilitate autism research.

In April of 2015, Amaral became Editor-in-Chief of Autism Research, the journal of the International Society for Autism Research. In 2016, he was appointed to the Interagency Autism Coordinating Committee by the Secretary of Health and Human Services.

Cameron S. Carter, M.D.

**Philosophy of Care**
Dr. Carter's philosophy of care includes early intervention, multidisciplinary team approach, family systems perspective.

**Clinical Interests**
Cameron S. Carter's clinical interest is the early diagnosis and treatment of schizophrenia and other cognitive mental disorders. His research focuses on the pathophysiology of disturbances in cognition in mental disorders such as schizophrenia and OCD, with the goal of developing more effective therapies to improve patients' chances of rehabilitation. Carter also is involved in development of new treatments for cognitive disability in schizophrenia and other brain disorders. A key element of the philosophy of his lab is that good clinical research can proceed only if it is being constantly informed by ongoing theoretical and methodological progress in basic cognitive neuroscience, and that the experiments of nature provided by clinical brain disorders may lead to powerful additional insights into the neural basis of normal cognition.

Jacqueline N. Crawley, Ph.D., is an internationally recognized leader in behavioral neuroscience, mouse behavioral genetics, and translational neuropharmacology. Dr. Crawley joined the University of California Davis in July 2012 as the Robert E. Chason Endowed Chair in Translational Research at the MIND Institute and Professor in Residence in the Department of Psychiatry and Behavioral Sciences at the UC Davis School of Medicine. Her research program focuses on rodent models of neuropsychiatric disorders. Current emphasis is on understanding the genetic causes of autism spectrum disorders, and discovering effective medical therapeutics for the core diagnostic symptoms of autism. Mouse models are used as preclinical research tools to test hypotheses about the etiology of autism and to evaluate the therapeutic benefit of proposed treatment interventions.

Dr. Crawley received her B.A. in biology from the University of Pennsylvania, Ph.D. in zoology from the University of Maryland, and conducted postdoctoral research in neuropsychopharmacology at Yale University School of Medicine. As an intramural investigator in the National Institute of Mental Health Intramural Research Program in Bethesda, Maryland from 1983 to 2012, she served as Chief of the Laboratory of Behavioral Neuroscience. Her laboratory has published over 260 papers and 100 reviews. She serves on 16 journal editorial boards and numerous scientific advisory committees. Honors include the Distinguished Scientist Award from the International Behavioral and Neural Genetics Society, Myers Lifetime Achievement Award from the International Behavioral Neuroscience Society, Society for Neuroscience Service Award, Fleur Strand Lecture Award from the Summer Neuropeptide Conference, Gladstone Institute of Neurological Disease Distinguished Scholar Award, MIND Institute Distinguished Lecturer, Mathilde Solowey Lecture Award in Neuroscience, NIMH Director’s Award, and Howard Hughes Medical Research Institute Preceptor Award. She serves on numerous review boards and councils, and is a Fellow of the American Association for the Advancement of Science.

The Crawley lab developed a multi-tiered strategy for behavioral phenotyping of mutant mice which has been widely adapted by the international biomedical research community. Her sole authored book, What's Wrong With My Mouse? Behavioral Phenotyping of Transgenic and Knockout Mice, has become the primer for the field. Beginning in 2000, Dr. Crawley’s team pioneered mouse behavioral tasks with conceptual relevance to the diagnostic symptoms of autism, which are employed by many research groups investigating lines of mice with mutations associated with autism spectrum disorders. Her expertise in mouse behavioral phenotyping offers a unique collaborative resource to the UC Davis research community.

David Randal Hessl, Ph.D.

**Philosophy of Care**
My philosophy is first to be a good listener, to really appreciate the patient's perspective, their developmental background, and to approach children and those with disabilities at their level. I enjoy using humor and a casual style to connect with these patients. I always try to bring knowledge of disabilities through scientific inquiry into the assessment process.

**Clinical Interests**
Dr. Hessl is a licensed clinical psychologist with clinical interests involve cognitive, emotional, and behavioral evaluation of children, adolescents and adults with neurodevelopmental disorders, especially those with fragile X syndrome, Down syndrome, autism spectrum disorders, ADHD, Tourette Disorder and learning disabilities.

**Research/Academic Interests**
Dr. Hessl directs the Translational Psychophysiology and Assessment Laboratory (T-PAL) at the MIND Institute to investigate the emotional psychophysiology of children with neurodevelopmental disorders, and to develop novel outcome measures for clinical trials. He also conducts collaborative studies with other researchers, investigating brain imaging, molecular genetics and neuropsychology in an effort to understand links between genetics, brain function and behavior. His research focus is primarily on fragile X-associated disorders, such as fragile X syndrome and fragile X-associated tremor ataxia syndrome (FXTAS). His lab has contributed to the refinement or development of cognitive and behavioral assessments for people with disabilities.

Ladson Hinton welcomes LGBT patients.

**Clinical Interests**

Dr. Hinton's clinical interests are in Geriatric Psychiatry.

**Research/Academic Interests**

Ladson Hinton, M.D. is a geriatric psychiatrist, clinical and services researcher, and social scientist. Over the past two decades, he has conducted interdisciplinary research to better understand the cultural and social dimensions of late life depression and dementia-related illness and caregiving experience among older adults and their families. He has applied this knowledge to develop innovative and culturally-appropriate intervention approaches to overcome gaps and disparities in healthcare. Dr. Hinton has received national recognition for his expertise on the cultural aspects of geriatric mental health and family caregiving and has received multiple awards from NIH as principal investigator. He is currently the principal investigator for an NIMH study entitled "A family-based primary care intervention to enhance older men's depression care" and is Co-Directing a project (CARE-Partners) to develop and implement innovative new community and family-centered models of care for depression in older adults through a grant from the California-based Archstone Foundation.

Dr. Hinton directs the Latino Aging Research Resource Center (https://www.ucdmc.ucdavis.edu/latinoaging/), one of seven national Resource Centers for Minority Aging Research (RCMAR) funded by NIA and also directs the Education Core for the NIA funded UC Davis Alzheimer's Disease Center. He chairs the Distinguished Scholars Advisory Board for the USC Roybal Institute on Aging and is an Associate of the Harvard Asia Center where he is engaged in a collaborative global health project to develop new models for eldercare in Asia. He was a Contributor to the DSM-5 Gender and Cross-Cultural Work Group and is co-editor of a forthcoming book entitled Cultural Formulation Interview Handbook (American Psychiatric Press, Inc.). He is currently serving on the Institute of Medicine (IOM) Committee on Family Caregiving for Older Adults.

Mia Juanita Hogains welcomes LGBT patients.

**Philosophy of Care**
I provide coordinated specialty care in an outpatient setting. This approach uses a team of people from multiple disciplines who work together to provide the best possible care. It is my belief that therapy does not necessarily need to last forever. My hope for you is that you can learn about your symptoms and learn new ways to cope and manage these symptoms. Then, you can go on with your life having gained this new knowledge.

**Clinical Interests**
Ms. Hogains is an LCSW in the SACEDAPT/EDAPT program which specialized in early psychosis care. She has a special interest in the utilization of trauma informed care for people with psychosis and trauma focused Cognitive Behavioral Therapy (CBT).

David Liu, M.D., M.S., is a staff physician in the Department of Psychiatry and Behavioral Sciences at the UC Davis School of Medicine. Dr. Liu completed his general psychiatry residency training at Case Western Reserve University, and then went to the University of California San Francisco to complete his Psychosomatic Medicine (PSM) Fellowship before joining the faculty at UC Davis. He is board-certified in both general adult psychiatry and psychosomatic medicine.

Dr. Liu specializes in psychosomatic medicine, emergency psychiatry, and the integration and collaboration of psychiatric care within primary care. He treats patients suffering from medical and surgical illnesses in a variety of inpatient and outpatient settings. He believes in the importance of utilizing psychodynamic principles, empathy and compassion when caring for the psychiatric and psychosocial needs of patients, as well as working to support their families and other caregivers.

Dr. Liu is actively involved in the recruitment and supervision of medical students, residents, and fellows. Through his integrative-model work within primary care, Dr. Liu collaborates with primary care providers and directs multifaceted team approaches to treating patients within the UC Davis Primary Care Network (PCN) and Health Management and Education.

Clinical Interests
Dr. McDermott is a Professor of Clinical Psychiatry and Research Director at Napa State Hospital (NSH). She completed her graduate training in Clinical Psychology at the University of Cincinnati. She serves as the instructor for the Forensic Psychiatry Fellowship Research and Psychological Assessment Seminar. She is the director of the UC Davis/NSH Forensic Psychiatry Research Division. Dr. McDermott has an extensive background in consultation to state government systems on Forensic Mental Health Issues. Her current interests and research involve risk assessments of violent offenders, the assessment and identification of malingering and factors related to success of forensic patients on conditional release status. Dr. McDermott has published in the area of factors associated with institutional aggression, malingering, release decision-making and competence of forensic patients.

Tara Ann Niendam welcomes LGBT patients.

Dr. Niendam supports all clients toward wellness and recovery, believing that managing symptoms is secondary to having meaningful roles, goals and relationships in one's life. She also believes that family and support persons are important for the recovery process and strives to include them in all aspects of assessment and treatment.

Dr. Niendam is a licensed clinical psychologist with specialized training in psychodiagnostic and cognitive assessment in youth at risk for or in the early stages of psychosis. As the Executive Director of the UCD Early Psychosis Programs, Dr. Niendam supervises clinic activities and staff and coordinates outreach and educational presentations within the community.

She also serves as the Co-Director for our HRSA funded pre-doctoral Trauma and Adolescent Mental Illness (TAMI) internship, which is a collaboration with the UC Davis CAARE Center to provide evidence-based trauma informed care to youth with early psychosis.

In her research, Dr. Niendam is interested in understanding how deficits in cognition can influence an individual's ability to maintain age-appropriate social and work/school functioning, as well as how the use of smartphones can improve clinical care for youth with psychosis.

Dr. Niendam's research has focused on four key themes: 1) understanding the cognitive correlates of serious mental illness, 2) linking cognition to brain circuitry, 3) elucidating how cognition and associated brain functioning contribute to real world functioning and clinical outcome across psychiatric and developmental disorders, and 4) evaluating the impact of interventions on outcomes in psychosis and disseminating best practices for early psychosis care.

She has explored these themes within and between multiple specific disorders, across dimensions of clinical symptomatology, and investigated how they can be impacted by intervention.

Taken together, she strives to understand how changes in the brain contribute to cognitive and clinical manifestations of psychiatric illness and lead to poor outcomes in clinical and psychosocial function.

Dr. Noctor studies development of cortical structures in the central nervous system. The cerebral cortex consists of billions of neurons and glia that are produced over a relatively short period of time during development. Dr. Noctor investigates factors that control proliferation of the precursor cells that produce cortical neurons and glia, and how cortical cells migrate over long distances to reach their appropriate position in the developing brain.

Dr. Ozonoff is a licensed clinical psychologist who works clinically with individuals on the autism spectrum. Her specialty is in early diagnosis in the infant and toddler years.

Dr. Ozonoff's research focuses on very young children with autism. She is studying the onset of autism in a prospective investigation that follows high-risk infants from birth through age 3. She is also developing an innovative autism screening instrument that uses video examples rather than written descriptions of behavior. Other research interests include early diagnosis of ADHD and prediction of later psychopathology from infant measures.

I utilize an evidence-based cognitive behavioral therapy approach.

Dr. Ragland is a clinical psychologist, with specialty training in neuropsychology, cognitive neuroscience, and functional neuroimaging. His clinical work is primarily with early psychosis patients, and he offers standardized intake assessment interviews and supervision of cognitive behavioral therapy based individual and group interventions.

Dr. Ragland is a Professor of Psychiatry and Behavioral Sciences at the University of California at Davis. He uses behavioral, functional neuroimaging, and electrophysiology methods to identify brain networks responsible for specific aspects of learning and memory, and to test the impact of psychotic disorders on these brain systems and memory functions, with the goal of identifying relative strengths and weakness to guide development of cognitive enhancing interventions.

Dr. Ragland serves on the editorial boards of Biological Psychiatry, Psychiatry Research: Neuroimaging, Schizophrenia Research and Treatment, Faculty of 1000 Medicine, is a recipient of the EJLB Young Investigator Award and Hoffman Trust NARSAD (now Brain & Behavior Research Foundation) Independent Investigator Award, a Robert Wood Johnson Foundation grant, and has received continuous funding through the NIMH.

Sally J. Rogers welcomes LGBT patients.

I specialize in working with parents of young children (3 and under) who have autism spectrum disorder and in working with parents with infants who are having difficulty with social interactions. I believe that parents and caregivers are the most important sources of learning and change for all young children, including those with ASD.

I also believe that a young child's daily routines with his or her caregivers are the most important learning environments and opportunities available. Working with young parents and other caregivers to support a young child's development of language, play, social communication, and happy participation in family life as part of everyday caregiving is very rewarding work for me because of the effects of daily interactions in everyday situations to support development and change.

Dr. Rogers' clinical interests include infants presenting with risk features of autism spectrum disorders; assisting parents with their young children with ASD; consultation with families or therapists when young children with ASD are not responding well to treatment; and difficult to treat children.

Dr. Rogers specializes in conducting research into autism and other developmental disorders, and treating patients who have developmental disabilities, especially young children with autism. She studies early developmental processes, including imitation, social-communicative behavior, development of motor skills, language and social interaction patterns. She collaborates on studies of autism in infant siblings, and is also involved in developing treatments and examining treatment efficacy in autism using a treatment model that she developed in collaboration with Geraldine Dawson, the Early Start Denver Model.

Her clinical interests include evaluation of cognitive, behavioral, social, emotional, and adaptive functioning; early intervention for children with autism; developing treatment and educational interventions for persons with autism of all ages; and social skills groups for adults with autism. Dr. Rogers has written extensively in her field, is an associate editor for Autism Research and serves on the editorial board of many publications, such as the Journal of Autism and Developmental Disorders, Topics in Early Childhood Special Education and Infants and Young Children.

Dr. Roof completed medical school and his residency training in psychiatry at the University of Texas Medical School at Houston. He completed additional training in forensic psychiatry at UC Davis. Dr. Roof has been qualified as an expert witness in federal, state and military courts and has testified to issues including bipolar disorder, substance use and memory. He is part of the Sacramento County Superior Court Expert Witness panel and has completed numerous appointments for them involving competency to stand trial, sanity evaluations and evaluations of sexual offenders. He is the site director for medical students and residents for Jail Psychiatric Services at the Sacramento County Jail. Dr. Roof is currently the first author on a book chapter for American Psychiatric Press Inc., (in press) involving geriatric criminal offenders.

Ruth E. Salo, Ph.D.

Clinical Interests
Dr. Salo specializes in conducting research into substance abuse and schizophrenia with an emphasis on methamphetamine and comorbid addiction. Dr. Salo employs neuroimaging techniques and cognitive assessment to better understand the neural and cognitive correlates of brain changes associated with long-term stimulant use and comorbid substance use in psychiatric patients at the UC Davis Imaging Research Center. Dr. Salo’s interests include the identification of neural circuits involved in behavioral regulation and cognitive control. Her research program is also focused on the study of recovery that may occur in the brain following extended periods of drug abstinence. Dr. Salo is funded by the National Institute of Drug Abuse (NIDA) and NARSAD. Dr. Salo reviews for various periodicals including Biological Psychiatry, Psychopharmacology, Drug and Alcohol Dependence, Neuropsychologia and Psychiatry Research Neuroimaging.

Lorin M. Scher welcomes LGBT patients.

**Philosophy of Care**

Dr. Scher treats patients suffering from medical and surgical illnesses in a variety of inpatient and outpatient settings, and he believes in an empathic and compassionate approach to patient care. Dr. Scher leads the emergency psychiatry team, and works with a large team of emergency physicians, psychiatrists, nurses, clinical social workers and case managers to stabilize patients who present to the emergency department.

**Clinical Interests**

Dr. Scher's clinical interests include: Psychosomatic Medicine (consultation-liaison psychiatry), Emergency Psychiatry, Behavioral Health Integration within Primary Care, Telepsychiatry Implementation in Primary Care, and Neuropsychiatry, specializing in Huntington's Disease. Dr. Scher completed his general psychiatry residency training at New York Presbyterian Hospital (Cornell). During that time, he completed a fellowship at the New York Psychoanalytic Institute. He also completed a psychosomatic medicine fellowship at UC Davis before joining its faculty. He is board-certified in general psychiatry and psychosomatic medicine.

**Research/Academic Interests**

Since 2011, Dr. Scher has collaborated with the ambulatory care leadership team to integrate behavioral health programs across the Primary Care Network. This team has implemented validated screening measures and a stepped-treatment model to improve patient outcomes. The stepped program includes electronic consultations, care coordination services, collaborative care for depression, telepsychiatry services, and embedded psychiatric consultants. Dr. Scher is the principal investigator for an innovation award through the UCD Practice Management Board, and is a co-investigator on a number of research and implementation grants related to behavioral health integration and huntington's disease (funded by AHRQ, CDC, CIRM). He also supervises medical students, residents, fellows and allied-health professionals in a variety of settings within UC Davis Health, including its psychosomatic medicine service, emergency psychiatry service, Primary Care Network, and within the Department of Care Services and Innovation. Dr. Scher also directs medical student education efforts within the Department of Psychiatry. He also serves as chair of the fourth year oversight committee within the school of medicine, which oversees the fourth-year curriculum.

Julie Beth Schweitzer welcomes LGBT patients.

**Clinical Interests**

Dr. Schweitzer's clinical specialty is ADHD evaluation and treatment in children, adolescents and adults. The ADHD Clinic is in the MIND Institute.

**Research/Academic Interests**

Dr. Schweitzer's research interests include the identification and treatment of challenges of impulsivity, inattention and problems with cognitive and emotional regulation in children and adults. Her research studies frequently involve behavioral/neuropsychological and functional neuroimaging methods.

Other interests include self-control and understanding the developmental trajectory of response to reward in typically developing adolescents and in ADHD.

She conducts research in behavioral, cognitive and pharmacological interventions for persons with ADHD and autism across the life span. Her program also includes an ADHD Clinic within the MIND Institute with evaluation and treatment for ADHD. Dr. Schweitzer's goal is to apply translational research methods using a variety of basic behavioral and physiological techniques to develop novel treatment and preventative approaches to addressing attentional disorders.

Additional funded collaborative work includes projects in autism. Dr. Schweitzer is also committed to training the next generation of clinical and translational scientists through her work at the UC Davis Clinical and Translational Science Center and the UC Davis Schools of Health Mentoring Academy (https://www.ucdmc.ucdavis.edu/mentoring/).

Charles L. Scott, M.D.

Dr. Scott is Chief, Division of Psychiatry and the Law, Forensic Psychiatry Training Director, and Professor of Clinical Psychiatry at the University of California, Davis Medical Center in Sacramento. He is board certified in Forensic Psychiatry, General Psychiatry, Child and Adolescent Psychiatry, and Addiction Psychiatry. He is the current president of the American Academy of Psychiatry and the Law (AAPL) and is also past-president of the Association of Directors of Forensic Psychiatric Fellowships. He has served as a member of the AAPL national task forces to develop guidelines for the evaluation of criminal responsibility and competency to stand trial. He is also one of the four AAPL Forensic Psychiatry Review Course Faculty instructors and in 2008 received the AAPL award as the most outstanding forensic psychiatry fellowship program instructor in the United States. Dr. Scott has served as a forensic psychiatric consultant to jails, prisons, maximum security forensic inpatient units, and to the National Football League (NFL) providing training on violence risk assessment for NFL counselors. He has been editor and co-editor on four books related to forensic psychiatry and has published articles and book chapters in the areas of risk assessment of violence and aggression, the death penalty, juvenile violence, and mental health law. His research interests include the relationship of substance use to aggression among criminal defendants and on the quality of forensic evaluations of criminal responsibility. He lectures nationally on the topics of violence risk assessment, juvenile violence, substance use and violence, the assessment of sex offenders, correctional psychiatry, and malpractice issues in mental health.

Mark E. Servis welcomes LGBT patients.

**Philosophy of Care**
Dr. Servis practices from a holistic perspective that understands and treats the patient using a biopsychosocial framework that includes cultural and spiritual dimensions.

**Clinical Interests**
Dr. Servis is a general psychiatrist with training and experience in consultation psychiatry to medical and surgical specialties. He has special expertise in personality disorders, integrated and collaborative care, and psychodynamic psychotherapy.

**Research/Academic Interests**
Dr. Servis is a national leader in medical education and a member of the UC Davis School of Medicine faculty for more than 25 years. His research interests include medical and residency education, cognitive models for the development of diagnostic expertise, psychiatry and spirituality, teaching professionalism and ethics, consultation-liaison psychiatry and psychosomatic medicine, treating severe personality disorders and neuropsychiatry. An expert in integrating psychiatric care with primary-care settings, he has pioneered combined residency training programs in family medicine and psychiatry, and internal medicine and psychiatry.

Dr. Silverman’s current expertise is in preclinical translational evaluation of pharmacological treatments for autism spectrum disorders. Dr. Silverman’s research team administered promising compounds to mice with social deficits and repetitive behaviors, and conducted assays for improvements in those two primary diagnostic domains of autism. Her most recent first author publications in Science Translational Medicine, Neuropsychopharmacology and Neuropharmacology described reductions in repetitive behaviors and mild improvements in social behavior in two mouse models of autism. Dr. Silverman’s group is currently working on project topics that include phenotypes of autism relevant genetic mouse models, the complexities in interpretation of mouse behavioral data, additional pharmacological treatment reversals in mouse models of autism and the development of mouse behavioral tasks of cognition using technology that is analogous to cognitive tasks being used clinically.

Dr. Silverman completed her undergraduate education in June of 1999 at Rutgers University, New Brunswick, NJ. She obtained a Bachelor of Arts degree in Biological Sciences and Psychology (Honors) with a heavy emphasis in Neurobiology and Behavior. During this time, Dr. Silverman gained insight into the clinical neurological community, by working as a Cognitive Retraining Therapist for individuals with behavioral disruptions caused by traumatic brain injuries. For her doctoral research at the Maryland Psychiatric Research Center, University of Maryland School of Medicine, she identified the impact of stress-related mechanisms in major mental illnesses. Employing rodent models, Dr. Silverman investigated neuroendocrine regulatory mechanisms through which episodes of depression, schizophrenia and drug abuse are triggered or exacerbated by inappropriate responses to stressors.

For her postdoctoral training, Dr. Silverman was recruited by Dr. Jacqueline Crawley, in July 2007, to join her Laboratory of Behavioral Neuroscience at the National Institute of Mental Health in Bethesda. Dr. Silverman’s projects employed a multi-tiered comprehensive phenotyping strategy, designed by Dr. Crawley and refined by Dr. Silverman, which has led to the discovery and publication of clinically relevant phenotypes in mutant mouse models of human genetic diseases including autism, attention deficit hyperactivity disorder, anxiety, depression, intellectual disabilities and Phelan-McDermid Syndrome.

Dr. Silverman is a leader in training new behavioral neuroscientists. She has trained, supervised and mentored numerous postbaccalaureates, Howard Hughes Medical Institute intern students and postdoctoral fellows. Dr. Silverman has been a member in good standing of the Society for Neuroscience and Women in Neuroscience for 10 years, and the International Society for Autism
Jill L. Silverman, Ph.D.

Research for 4 years. Dr. Silverman further provided service via collaborative advice and training in mouse behavioral testing methods to over 30 colleagues. Dr. Silverman also communicates and participates in dialogue aimed at informing parent advocates of the nation’s top non-profit organizations to aid support and funding tailored to basic research in neurodevelopmental disorders. Dr. Silverman enjoys educating on the use of animal models in studies of autism and neurodevelopmental disorders to student and public communities. Additional accolades for Dr. Silverman include five performance awards for research excellence from the National Institute of Mental Health Intramural Research Program and three Howard Hughes Medical Institute Student Internship Mentor Awards.

Joseph I. Sison, M.D.

*Philosophy of Care*
Dr. Sison believes in empowering his patients and their families by educating them on the nature of their disorder. He enjoys working with patients and their family members and believes that medication treatment in conjunction with family therapy, mobilizing support systems, and working with the school community is very important in treating children and adolescents with mental illness.

*Clinical Interests*
Dr. Sison has been a physician and child psychiatrist since 1993, after finishing his child psychiatry training at University of Maryland Medical Systems. He is a medical school graduate from UCLA School of Medicine and has been practicing medicine as a board certified psychiatrist since 1993. He is a faculty at UC Davis School of Medicine / UC Davis Health System in the department of Psychiatry & Behavioral sciences since 1994. Over the past 7 years, he has also been the medical director of the largest free-standing private psychiatric hospital in the greater Sacramento area, Heritage Oaks Hospital, a Universal Health Services, Inc. hospital. Previously, he was the medical director for 16 years for the Sacramento County Children's Mental Health. He had served in two local non-profit boards: The Head Trauma Support Project and Big Brothers Big Sisters of the Greater Sacramento.

Dr. Sison has been past-president of the Central California Psychiatric Society (a district branch of the American Psychiatric Association) and has served in the Children's Committee at the Sierra Sacramento Valley Medical Society. He is a Distinguished Fellow of the American Psychiatric Association. His clinical interest is in treating pediatric patients with ADHD, depression, bipolar disorder, or schizophrenia and he likes working with the severely mentally ill population and their families.

Dr. Marjorie Solomon is a Professor in the Department of Psychiatry and Behavioral Sciences, the MIND Institute, and the Imaging Research Center. She holds a BA from Harvard College, and a PhD in Psychology from UC Berkeley. She also is a licensed clinician with a broad background in clinical assessment and psychosocial intervention for higher functioning individuals with autism spectrum disorders (ASD). In 2007, she received a K08 Career Development Award to use cognitive neuroscience methods including fMRI to study higher cognition. From 2012-2013, Solomon served as an appointee of HHS Secretary Kathleen Sebelius to the InterAgency Autism Coordinating Committee (IACC).

Solomon’s current research examines cognitive development in individuals with ASD through the lifespan using neuropsychology and cognitive neuroscience methods including functional magnetic resonance imaging (fMRI). She currently is funded by NIMH to examine intellectual and cognitive functioning in middle childhood (ages 8-12); to isolate behavioral and neurobiological predictors of developmental trajectories of intellectual functioning between early and middle childhood; and to test two mechanistic models of the effects of early intensive behavioral intervention on middle childhood outcomes related to academic, social, and adaptive functioning by conducting a follow-up study of a large, well-characterized, and relatively recent longitudinal cohort of children with ASD and typical development who were first assessed in early childhood (ages 2-3) as part of the MIND Institute Autism Phenome Project (APP). She also recently received funding from NIMH to...
initiate a longitudinal cohort sequential study of the development of cognitive control, memory, mental health, family factors, and adaptive functioning, and life outcomes in a cohort of adolescents and young adults ages 12-27 at the end of the year.

Solomon's ultimate goal is to apply what she learns through her neuroscience investigations to the development of interventions – the area where she began her career at the MIND, and one she continues to develop as the Director of the MIND social skills training group program. She is fortunate to have received philanthropic funding for this program from Joyce and Jim Teel for the Thomas P. Raley Foundation. An Endowed Chair from the Oates Family Foundation and funding from the UC Davis Behavioral Health Center of Excellence has permitted her to further develop intervention programs for adults with ASD.

Aubyn C. Stahmer welcomes LGBT patients.

**Philosophy of Care**
My philosophy of care includes developing a partnership with families to develop an effective understanding of their children's strengths and challenges in order to develop a plan of care that fits their child and family.

**Clinical Interests**
Dr. Stahmer's clinical interests involve early intervention and parent coaching interventions for young children with, or at-risk for, autism spectrum disorders and their families; inclusive education for students with autism spectrum disorders, school-based services for elementary students with autism spectrum disorders, early identification and diagnosis of ASD.

**Research/Academic Interests**
Effective early intervention strategies, dissemination and implementation of evidence-based ASD interventions to community settings and low resource areas.

Hendry Ton, M.D., M.S.

Clinical Interests: Hendry Ton has a particular interest in cross-cultural psychiatry and working with underserved patient communities, especially Southeast Asian refugees. He believes in the importance of utilizing psychodynamic principles when caring for patients in medication management and support. Ton has developed a patient database called PsychNotes, which allows for rapid entry of clinical, demographic and insurance information. He is exploring issues faced by ethnic minorities in the mental health system and applying his experience in qualitative research methodology.

Laura Magdalen Tully welcomes LGBT patients.

**Clinical Interests**

Dr. Tully is a Licensed Clinical Psychologist and the Director of Clinical Training at the UC Davis Early Psychosis Program (SacEDAPT and EDAPT clinics). Dr. Tully provides instruction in evidence-based treatment and assessment approaches for youth experiencing psychosis, with an emphasis on CBT for psychosis in the context of the Coordinated Specialty Care model.

**Research/Academic Interests**

Dr. Tully's research uses neuroimaging (fMRI) and experience sampling techniques to examine how the neural and behavioral mechanisms of cognitive control and emotion regulation relate to response to social stress in individuals experiencing psychosis. Dr. Tully's research also includes the use of smartphone technologies, such as mobile health applications, as add-on tools for symptom management and treatment in early psychosis care. In particular, Dr. Tully is interested in how to improve cognitive control and emotion regulation skills using mobile health technology to reduce symptom exacerbations and improve functioning.

Dr. Yellowlees lives in Sacramento California, where he is Vice Chair for Faculty Development and Professor of Psychiatry at the University of California Davis. He is Vice President of the American Telemedicine Association, a member of the Institute of Medicine’s review committee evaluating the national VA mental health services for veterans, a member of the American Psychiatric Association workgroup on telepsychiatry, and co-founder of HealthLinkNow Inc.

Dr. Yellowlees is an experienced speaker and media commentator who has written and produced over 150 video editorials on Psychiatry for Medscape. He has a number of research interests and is presently working on the development and validation of asynchronous telepsychiatry, automated translation and clinical interpreting systems, internet e-mail and video consultation services and assessment and treatment protocols to improve physician health and wellness.

From a clinical perspective Dr. Yellowlees is an expert in physician health and telepsychiatry. He chairs the UC Davis Health System Wellbeing Committee and has many physicians as patients. He has provided clinical consultations to patients on Indian Health reservations via telemedicine for over a decade.

Dr. Yellowlees has worked in public and private sectors in the USA, Australia and the UK, in academia, and in rural settings. He has published five books and over 200 scientific articles and book chapters.

Erik Youngdale welcomes LGBT patients.

**Philosophy of Care**

I work with children, teenagers and their families and caregivers to try to understand and help with a variety of problems including attention problems, mood and anxiety problems, and behavioral problems.

I believe there are many different tools for helping with these problems, including therapy and medications. My goal is to help patients and their families find the tools they need to understand and cope with the problems that are bothering them.

**Clinical Interests**

Dr. Youngdale is a child and adolescent psychiatrist who offers care for problems such as ADHD, mood problems and anxiety problems. He works in the CAPS clinic, a Sacramento County operated clinic that provides care for patients who do not have private insurance.
