

# Robert S. Byrd, M.D., M.P.H.

<b>Philosophy of Care</b>	Pediatrics was the specialty I enjoyed most in medical school. It is a field that combines prevention and treatment. Rather than focusing strictly on illness, I prefer to concentrate on wellness in a broader sense. Wellness includes physical health, but is also influenced by family interactions, cognitive development and emotional and behavioral well-being. My work with patients is distinguished by an evidence-based practice, which avoids treating colds and other viral illnesses with antibiotics. I also assess family and other environmental factors that influence a child's health. Providing children with a safe and nurturing environment is important to their health. Good health necessitates avoiding health-impairing behaviors, including smoking, dietary excess and sedentary lifestyle. In addition, children's attitudes toward school and their academic success contribute to their ultimate health and well-being. In my proactive approach, I focus on early literacy, school readiness and school performance.
<b>Clinical Interests</b>	Robert S. Byrd's clinical expertise includes wellness, physical health, cognitive development, and emotional and behavioral well-being. His pediatric practice is distinguished by an evidence-based philosophy that avoids treating colds and other viral illnesses with antibiotics. Byrd focuses on early literacy, school readiness and school performance. His research in the area of delayed school entry was published in the journal <i>Pediatrics</i> .
