The Violence Prevention Research Program (VPRP) is seeking a highly-motivated data analyst to join our core research staff. The successful candidate will participate in overall study design, analysis plan design, execution of analyses, and interpretation of the results for a series of studies of the causes, consequences, and prevention of violence, mental health, substance abuse, and related topics. In particular, the analyst will be responsible for collection, management, quality control, and analysis of data for these studies. This analyst will also provide research study support to program investigators in: designing, conducting, and summarizing results of literature reviews for grant proposals and manuscripts; grant proposal and manuscript writing; preparing materials for conferences and lectures; and in preparing and submitting IRB protocols.

A master’s degree in public health epidemiology, biostatistics, or related field is strongly preferred. The incumbent is required to have experience with scientific manuscript writing and statistical data analysis in an academic, research, or similar setting; to be able to conduct and summarize results from literature reviews; and to understand the principles of epidemiological study design. Preference will be given to candidates with experience managing and analyzing data using statistical software such as SAS, R, or Stata or to those with experience conducting simulation analyses.

On the left, select the appropriate gold box (current health system employee or other)
Click on “view job postings/apply for job”
In the Reference box, enter 043377 and click “search”

Applicants are strongly encouraged to submit a cover letter and CV.
The position will remain open until filled.

VPRP is a multi-disciplinary program of research and policy development focused on the causes, consequences, and prevention of violence. We helped develop the public health approach to violence; our continuing mission is to develop and disseminate the research evidence on which informed policy and practice are based. VPRP’s director is emergency physician Garen Wintemute, MD, MPH, Baker-Teret Chair in Violence Prevention and one of the nation’s leading firearm violence researchers. Magdalena Cerdá, DrPH, is the Vice Chancellor’s Chair in Violence Prevention and VPRP’s Associate Director. Dr. Cerdá is an internationally known social epidemiologist with special expertise in violence and substance abuse. Collaborating researchers include representatives from medicine, epidemiology, criminology, biostatistics, economics, and the law. More information is at http://ucdmc.ucdavis.edu/vprp.
